with Excel and Outlook data • Maintaining an Access database Two of the coolest tools that have ever come out from Microsoft are certainly Microsoft SQL Server and Microsoft Access. Microsoft Access databases have certainly become more prevalent over the last 2 years as large corporations break the imposed ban on using the tool. Many of our large corporate clients and government clients have stymied development in Microsoft Access for varying reasons which can include security issues or simply the IT Managements belief that they don't want to support the application. Some of the reasons why IT Departments do not want Microsoft Access in their environments are quite valid. For example, the use of Access Databases in high security areas such as in the Education Department for storing student information, Department of Defence systems, Hospitals storing patient data are all valid reasons why data should not be stored in a MS Access Database.

This Special Issue comprises articles related to the effects of genotype and processing conditions on the phenolic compound profile and antioxidant activity of cocoa-derived products, isolation and characterization of antioxidant compounds such as polyphenols and melanoidins from cocoa beans, and assessment of the antioxidant, antioxidative stress and anti-inflammatory effects of cocoa beans and

cocoa-derived products. The results of these studies show that it is possible to maintain or increase the biological activity of cocoa beans and their derived products (cocoa powder and chocolate) by choosing appropriate processing conditions and cocoa genotype and origin. The papers published in this Special Issue confirm that cocoa beans and cocoa by-products can be considered as an attractive source material for manufacturing of functional foods and nutraceuticals. This is because they contain many bioactive compounds, mainly polyphenols, including flavonoids (proanthocyanidinins, monomeric flavan-3-ols, and anthocyanins) and phenolic acids, as well as melanoidins. Finally, the in vitro and in vivo studies demonstrate the importance of cocoa antioxidants for the prevention of oxidative stress and inflammation.
