In this report the Public Administration Select Committee (PASC) concludes that, despite the positive steps implemented by the Statistics and Registration Service Act 2007 (the Act), there remain issues and concerns about the way government statistics are produced and disseminated which remain a genuine risk to public confidence in the statistical system and must be addressed. The Act was intended to ensure that statistics are produced to the highest professional standards and that effective governance structures are in place to protect transparency and accountability and the Committee found the Act had helped to improve the operation of the statistical system. However, the Act needs to have greater clarity and transparency in the way it operates and in the functioning of the UK Statistics Authority (the Statistics Authority). Those who regulate the quality of National Statistics are in the same organisation as those officials

who produce data: the two groups should have a clear separation in practice, but this is hard to demonstrate when they work in the same building and share support services. It is also not appropriate that ministers should have lengthy prior access to certain statistics but other interested parties do not. The Statistics Authority does not seem to have sufficient control over the quality and integrity of the different data sets and statistical products produced by departments and their agencies. Planning and improving data access both within Government and for users outside Government should be given greater attention by the Statistics Authority, as well as by Government departments.

There is virtually no way to complete one's education without encountering a research report. The book that has helped demystify qualitative and quantitative research articles for thousands of readers, from the authors of the best-selling *Proposals that Work*, has been revised. This edition is completely reorganized to separate quantitative and qualitative research with four new distinct sections (research reports, quantitative research, qualitative research, and research reviews). The authors presume no special background in research, and begin by introducing and framing the notion of reading research within a wider social context. Next they offer insight on when to seek out research, locating and selecting the right reports, and how to help evaluate research for trustworthiness.

- Students get valuable practice in interpreting statistical reporting as it actually appears in journals. In each of the 62 exercises, your students will read a brief excerpt of statistical reporting from a published research article.
- Each exercise begins with guidelines for interpreting the statistics in the excerpt.
- The questions on the excerpts promote learning by

requiring students to · interpret information in tables and figures, · perform simple calculations to further their interpretations, · critique data-reporting techniques, and · evaluate procedures used to collect data. • Each exercise covers a limited number of statistics, making it easy for you to coordinate the exercises with lectures and a main textbook. • The questions in each exercise are divided into two parts: (1) Factual Questions and (2) Questions for Discussion. The factual questions require careful reading for details, while the discussion questions show students that interpreting statistics is more than a mathematical exercise. These questions require them to apply good judgment as well as statistical reasoning in arriving at appropriate interpretations. • Thirteen new exercises interspersed throughout show how to interpret a greater array of statistical reporting.

Statistics for Sport and Exercise Studies guides the student through the full research process, from selecting the most appropriate statistical procedure, to analysing data, to the presentation of results, illustrating every key step in the process with clear examples, case-studies and data taken from real sport and exercise settings. Every chapter includes a range of features designed to help the student grasp the underlying concepts and relate each statistical procedure to their own research project, including definitions of key terms, practical exercises, worked examples and clear summaries. The book also offers an in-depth and practical guide to using SPSS in sport and exercise research, the most commonly used data analysis software in sport and exercise departments. In addition, a companion website includes more than 100 downloadable data sets and work sheets for use in or out of the classroom, full solutions to exercises contained in the book, plus over 1,300 PowerPoint slides for use by tutors and lecturers. Statistics for Sport and Exercise Studies is a complete, user-friendly introduction to

the use of statistical tests, techniques and procedures in sport, exercise and related subjects.
