For those committed to the beliefs of Christianity perhaps more so for those of the Catholic faith the conception of Jesus is deemed an immaculate, non-sexual event. He was conceived within the womb of Mary through the Holy Spirit, whereupon Marys spouse and Jesus earthly father, Joseph, was faced with the issue of accepting his wifes fidelity in the entire matter. This loosely describes the divine conception of Jesus as derived from words found in The New Testament of The Bible, while it is hoped that hackles of certain readers will not be raised through words appearing in The Near and Far Sides of Death (NFSD) where similar claims are made. Namely, along with Jesus divine conception, we have been conceived in much the same manner, although under entirely different circumstances. In a very distant past, well before there were galaxies far, far away and prior to the bestowal of mortality on any cosmic being, the initial birth of everyone who has ever existed took place. This momentous occasion occurred about 14-billion years ago when we collectively emerged arm-in-arm with the entire universe, or more fittingly, the emergence was an energy-upon-energy arrangement. Such is the manner in which our lives actually began, although parties interested in researching the event will be hard pressed to find any form of intelligence or mortality within the enormous burst of radiant energy that signaled our arrival. In truth, the entire referenced era, plus several subsequent brief periods are non-reviewable. Following a

colossal upheaval at time-zero of which we were a part dubbed the Big Bang our incipient mortality lay in a dormant, yet highly charged state that featured billions of years of cosmic development, or cosmic gestation as it were. This hard-sell proposal forms a major theme of the story, and though it appears well beyond the pale of rational belief, it becomes wholly credible after reviewing facts and discussion that are relevant to the topic. An excerpt from NFSD that is part of this relevant discussion appears below. It addresses the angst-ridden issue of abortion. Many of those in the clergy and laypersons alike believe that life begins at conception, when a sperm cell fertilizes a female ovum. At the moment of this one-on-one encounter within a female fallopian tube, some will openly endorse the existence and reality of life, even though only a genetic code exists that will later establish and identify a unique human form having intellectual propensities. Further, under these primal, entry-level conditions of development, life is granted the same validity, the same sacred status it receives during any post-natal stage. Based on the largest of pictures, which includes the characteristics of our cosmic world and the presumed nature of its creator, I'm convinced the proper outlook is one in which conception becomes the first breath of mortality. The belief is upheld by the fact that palpable judgments regarding a scheduled beginning of life, or life under any terms, is established as a matter of human judgment, which is always subject to error and far too often, wrong. Does a person exist who is capable of rendering such lofty decisions? Life is a sacred gift and attempts to

distinguish its base identity, let alone its scheduled reality, should be cautiously approached. In addition, an individual claiming to have properly defined the issue will be singled out as one capable of defining the appointed time when God intended life should exist. Would the creator of everything decree that life is established at some designated moment of pre-fetal, fetal, or post-fetal development, which parallels our conventional but limited visions of life? Isnt it possible that His would be a perspective of far broader scope, one in which life may have commenced during a recent past when our species awakened from an intellectual darkness? Since Luna and Lunar Orbiter photographed the far side of the Moon, the mysterious dichotomy between the face of the Moon as we see it from Earth and the side of the Moon that is hidden has puzzled lunar scientists. As we learned more from the Apollo sample return missions and later robotic satellites, the puzzle literally deepened, showing asymmetry of the crust and mantle, all the way to the core of the Moon. This book summarizes the author's successful search for an ancient impact feature, the Near Side Megabasin of the Moon and the extensions to impact theory needed to find it. The implications of this ancient event are developed to answer many of the questions about the history of the Moon.

The far side of the Moon, also called the "dark side of the Moon" was unknown to humanity until the Luna and Lunar Orbiter pictures were returned to Earth. This wonderful book contains beautiful photographs and newly-assembled mosaic images of the far side of the Moon, cleaned of transmission, imaging stripes and processing artifacts by today's computer technology. Byrne's superb analysis documents the appearance of the features of the far side with beautiful pictures from Lunar Orbiter. Until now, the far side Lunar Orbiter photos have only been available with strong reconstruction lines, but appear here for the first time as complete photographs, unmarred by imaging and processing artifacts.

After an introductory chapter treating generally Britain's war-time Middle Eastern policies and the activities of the Sherifians, the individual cases of Faisal, Abdullah and Husain are considered in separate chapters. With regard to Faisal and Abdullah, the analysis concludes at that point at which Britain made a definitive commitment to Sherifian rule in Iraq and Transjordan. In the final chapter, Britain's policy of supporting Husain is considered and the reasons for the failure of the policy of supporting the family as a whole are assessed in light of the collapse of Sherifian rule in the Hijaz. Despite that failure, the author concludes that, viewed in the context of the post-war Middle Eastern settlement, British sponsorship of Hashemite rule represented sound

Darwin figured it out 150 years ago. The Theory of Natural Selection. Survival of the fittest. Remember that from junior high biology? The strongest, smartest, fastest, most attractive members of an animal species succeed in winning mates, thus assuring the survival-and gradual evolution-of their breed. Think about it. . .and then feel good about yourself. After all, you've survived. You spring from a long line of winners. Well done! But what comes of the less fit. . .those that nature does not select? You know. . . the slow-witted and weak, the dim and the just plain dorky. Well, but for the work of one man, we likely would never know. Luckily, Gary Larson has chronicled the mishaps, maladies, and miserable failures of these less-than-alpha males and females in The Far Side. By paying special attention to the peculiar mating rituals practiced by The Far Side's subjects (dogs, cows, clowns, apes, nerds, etc.), Larson has over the years developed what amounts to the definitive treatise on inept courtship behavior.

In the tradition of his New York Times bestseller, Napa, James Conaway picks up the story he began a decade ago. The Far Side of Eden offers "a fascinating look at the political side of the wine revolution that put California's Napa Valley on the world map" (Miami Herald). Now, Conaway reveals, Napa is awash in dollars generated by the boom economy and the social ambitions it inspired. The valley is beset by new arrivals determined to have vineyards of their own and by cult-wine producers in thrall to fabulously expensive "rocket juice" (cabernet sauvignon) that few locals can afford - while established families wish to hold on to the old ways, and camp followers get caught up in the glamour of it all. Conaway, long known for his controversial, compulsively readable social reporting, here "indicts the wave of new-money millionaires from Silicon Valley, who have brought with them gaudy displays of wealth -- building so-called 'McMansions' and planting 'vanity vineyards'" (Los Angeles Times). "A cautionary tale . . . [with] a seductive pull" (San Francisco Chronicle), The Far Side of Eden takes us to the frontlines of America's ongoing conflicts over money, land, and power to tell a story that has ramifications for us all.

Hot on the paws of the howling success of Wiener Dog Art comes the new Far Side masterpiece Unnatural Selections. Including more than 100 cartoons in their book debut, it also unearths an original four-color insert created by Gary Larson especially for this twelfth collection. Journey back in time as Larson does for evolution what he previously did for art.

Dr. Hale recounts his often amazing (and sometimes almost unbelievable) experiences in bringing western medicine to people who distrust--even fear--the introduction of ideas different from their own. He and his family work as a team to dispel that distrust and fear and in the process have experienced incredible adventures--Cover.

John Weir Perry (1914-1998) first met C. G. Jung in Switzerland as a young medical student, where he was intrigued by Jung's assertion that schizophrenia is a natural healing process. During the 1970s, he founded an experimental residential facility called Diabasis in Berkeley, California, designed as a supportive home for young adults who were experiencing the initial days of their first "acute schizophrenic break." At Diabasis, these full-blown "schizophrenics" were able to emerge "on the far side of madness," as Perry put it, "weller than well," without any treatment by medication, electroshock, or locked doors. When "The Far Side of Madness" was first published in 1974, Perry's deep insight into the nature of so-called "schizophrenia" opened the way for a radically new, more compassionate approach to this condition. This pioneering work of Jungian psychiatry reframes acute psychotic episodes in the context of visionary experience of schizophrenic patients and describes innovative methods of handling them.

Margo Murphy is running out of time in a borrowed body Last night, Margo and her fellow colonists survived The Conglomerate's efforts to destroy them. Now all she wants is to build a peaceful life away from the corporate monopoly dominating Earth. But a virus has infected the colony's AI, threatening their life support. The virus is only a symptom of a deeper evil, the culmination of a cold war conducted in secrecy for almost two centuries reaches its zenith in an enigmatic boy, abandoned to die on their world. To purge the virus, save the boy and protect the colony, Margo needs information from The Conglomerate's headquarters orbiting Earth, but she's in another solar system without a spaceship. Her only option is an experimental technology to project her mind across the galaxy. Will Margo gain access The Conglomerate's secrets to save her world, or will her mind be lost forever in the cold void of space?

Time. Immutable. Untouchable. A river always streaming past us. Something we can't ever turn back or fix. Or can we? John Gillian, renowned physicist, and Rebecca Harleson, renaissance thinker and mathematician, and their team, have created the first machine capable of sending messages through infinite time and space. Their invention causes shock waves throughout the world, and become the target of protestors and unscrupulous politicians. The possibilities for misuse are endless. When the newly appointed Secretary of Technology Development takes over the project to prevent a tragedy from occurring, the warnings of side effects are ignored. The results are a world spinning out of control as great paradoxes are manifested around the team and their

The result of an exhaustive study of Sir Patrick Moore's observations of the Moon and planets for more than 60 years, this book is a fantastic companion to the extremely popular, "It Came From Outer Space Wearing an RAF Blazer!" written by the same author. Moore recorded his telescopic observations in his logbooks, which are reproduced and described here in detail, along with his sketches and notes. In this light, the author discusses the factors that caused Moore to switch from lunar observing to planetary and variable star observing. He has also included personal recollections and humorous anecdotes from Moore's friends and acquaintances, as well as a look at his best loved books. Further chapters describe Moore's foreign travels and correspondence with those back home. Lastly, the author has not neglected a few of Moore's most memorable television and radio appearances, which are examined along with a close up of what it was like to visit Moore's beloved home of Farthings in Selsey. Essentially, this is a book written by popular demand from the readers of the author's original biography, who craved more of Moore!
