FashionFrom Concept to Consumer

Fashion is a lot more than providing an answer to primary needs. It is a way of communication, of distinction, of proclaiming a unique taste and expressing the belonging to a group. Sometimes to an exclusive group. Currently, the fashion industry is moving towards hyperspace, to a multidimensional world that is springing from the integration of smart textiles and wearable technologies. It is far beyond aesthetics. New properties of smart textiles let designers experiment with astonishing forms and expressions. There are also surprising contrasts and challenges: a new life for natural fibers, sustainable fabrics and dyeing techniques, rediscovered by eco-fashion, and "artificial apparel," made of wearable electronic components. How is this revolution affecting the strategies of the fashion industry?

Providing a critical insight into the growth of the secondhand luxury and vintage fashion industry, this book offers a compendium of business developments from across the globe, including examples from Europe, the Middle East and Asia. The 'pre-loved or pre-owned' clothing trade has grown as an economic entity, providing a living for over 100,000 people and creating a desirable and essential clothing source in under-developed economies. By debating and deliberating contemporary cases, the authors illustrate how companies can optimise key managerial activities surrounding product branding, location marketing and supply chain buying. This timely collection is an important read for anyone involved in fashion, but particularly those interested in the retail and marketing perspective of the industry, as it explores an emerging and significant retail format.

The make-take-waste paradigm of fast fashion explains much of the producer and consumer behavior patterns towards fast fashion. The evolution from a two-season fashion calendar to fast fashion, characterized by rapid product cycles from retailers and impulse buying by consumers, presents new challenges to the environment, workplace and labour practices. This book provides a comprehensive overview of new insights into consumer behaviour mechanisms in order to shift practices toward sustainable fashion and to minimize the negative impacts of fast fashion on the environment and society. Concepts and techniques are presented that could overcome the formidable economic drivers of fast fashion and lead toward a future of sustainable fashion. While the need for change in the fashion industry post-Rana Plaza could not be more obvious, alternative and more sustainable consumption models have been under-investigated. The paucity of such research extends to highly consumptive consumer behaviours regarding fast fashion (i.e. impulse buying and throwaways) and the related impediments these behaviours pose for sustainable fashion. Written by leading researchers in the field of sustainable fashion and supported by the Textile Institute, this book evaluates fashion trends, what factors have led to new trends and how the factors supporting fast fashion differ from those of the past. It explores the economic drivers of fast fashion and what social, environmental and political factors should be maintained, and business approaches adopted, in order for fast fashion to be a sustainable model. In particular, it provides consumer behaviour concepts that can be utilized at the retail level to support sustainable fashion.

This book explores how clothing consumption has changed in Russia in the past 20 years as capitalism has grown in a postsocialist state, bringing with it a "consumer revolution." It shows how there has been and continues to be a massive change in the fashion retail market and how ideal lifestyles portrayed in glossy magazines and other media have contributed to the consumer revolution, as have shifts in the social structure and everyday life. Overall, the book, which includes the findings of extensive original research, including in-depth interviews with consumers, relates changes in fashion and retail to changing outlooks, identities, and ideologies in Russia more generally. The mentioned changes are also linked to the theoretical concept of fashion formed in postsocialist society.

An investigation into the damage wrought by the colossal clothing industry – and the grassroots, high tech, international movement fighting to reform it. What should I wear? It's one of the fundamental questions we ask ourselves every day. More than ever, we are told it should be something new. Today, the clothing industry churns out 80 billion garments a year and employs every sixth person on Earth. Historically, the apparel trade has exploited labour, the environment, and intellectual property – and in the last three decades, with the simultaneous unfurling of fast fashion, globalization, and the tech revolution, those abuses have multiplied exponentially – and primarily out of view. We are in dire need of an entirely new human-scale model. Bestselling journalist Dana Thomas has travelled the globe to discover the visionary designers and companies who are propelling the industry toward that more positive future by reclaiming traditional craft and launching cutting-edge sustainable technologies to produce better fashion. In *Fashionopolis*, Thomas sees renewal in a host of developments, including printing 3-D clothes, clean denim processing, smart manufacturing, hyperlocalism, fabric recycling – even lab-grown materials. From small-town makers and Silicon Valley whizzes to household names such as Stella McCartney, Levi's and Selfridges, Thomas highlights the companies big and small that are leading the crusade. We all have been casual about our clothes. It's time to get dressed with intention. *Fashionopolis* is the first comprehensive look at how to start.
