Bioarchaeologists who study human remains in ancient, historic and contemporary settings are securely anchored within anthropology as anthropologists, yet they have not taken on the pundits the way other subdisciplines within anthropology have. Popular science authors frequently and selectively use bioarchaeological data on demography, disease, violence, migration and diet to buttress their poorly formed arguments about general trends in human behavior and health, beginning with our earliest ancestors. While bioarchaeologists are experts on these subjects, bioarchaeology and bioarchaeological approaches have largely remained invisible to the public eye. Current issues such as climate change, droughts, warfare, violence, famine, and the effects of disease are media mainstays and are subjects familiar to bioarchaeologists, many of whom have empirical data and informed viewpoints, both for topical exploration and also for predictions based on human behavior in deep time. The contributions in this volume will explore the how and where the data has been misused, present new ways of using evidence in the service of making new discoveries, and demonstrate ways that our long term interdisciplinarity lends itself to transdisciplinary wisdom. We also consider possible reasons for bioarchaeological invisibility and offer advice concerning the absolute necessity of bioarchaeologists speaking out through social media.

Collection of the monthly climatological reports of the United States by state or region, with monthly and annual national summaries.

Highlights of the book: Discussion about all the fields of Computer Aided Engineering, Finite Element Analysis Sharing of worldwide experience by more than 10 working professionals Emphasis on Practical usage and minimum mathematics Simple language, more than 1000 colour images International quality printing on specially imported paper Why this book has been written ... FEA is gaining popularity day by day & is a sought after dream career for mechanical engineers. Enthusiastic engineers and managers who want to refresh or update the knowledge on FEA are encountered with volume of published books. Often professionals realize that they are not in touch with theoretical concepts as being pre-requisite and find it too mathematical and Hi-Fi. Many a times these books just end up being decoration in their book shelves ... All the authors of this book are from IITTMs & IISc and after joining the industry realized gap between university education and the practical FEA. Over the years they learned it via interaction with experts from international community, sharing experience with each other and hard route of trial & error method. The basic aim of this book is to share the knowledge & practices used in the industry with experienced and in particular beginners so as to reduce the learning curve & avoid reinvention of the cycle. Emphasis is on simple language, practical usage, minimum mathematics & no pre-requisites. All basic concepts of engineering are included as & where it is required. It is hoped that this book would be helpful to beginners, experienced users, managers, group leaders and as additional reading material for university courses.

A biographical record of contemporary achievement together with a key to the location of the original biographical notes.
