'How and why do transnational regulatory bodies emerge? How do they acquire the authority and confidence to be actors in their own right? These questions preoccupy scholars in many disciplines and Sebastian Botzem's *The Politics of Accounting Regulation* makes an important contribution to the debates. Focusing on the case of the International Accounting Standards Board over a critical period of its development including the financial crisis Botzem addresses its evolution as an organization which produces accounting standards and whose efforts to be outside politics are inevitably and irredeemably political in nature. This book is essential reading for sociologists, political scientists, accountants and anyone else interested in the organization of global governance.' Michael Power, London School of Economics, UK

The financial crisis underlines the relevance of accounting standards as much more than instrumental rules for corporate reporting. This important book outlines the accounting standards that embody societal and professional values and contribute to the distribution of financial benefits that put international harmonization of standards into the limelight. Sebastian Botzem reveals that international standards have emerged after decades of contest and political bargaining which resulted in closely aligned standards, voluntary consultation procedures and a network structure comprising actors mainly stemming from global auditing firms, regulators and international organizations.

This book presents the views of accounting educators, accounting education policy-makers, and accounting practitioners from across the world on the challenging topic of liberalising the accounting curriculum within university education. Accounting is a relatively new subject within universities and has been absorbed into a high level of education without any real attempt to do so within the traditional ethos of a liberal arts education. In this book, the logic of teaching using the liberal arts is described and contrasted with the practical vocational training approach of teaching which has formed the foundation of accountancy courses for many years. A proposal to change this established practice, by integrating the liberal arts into the university accounting curriculum, is followed by a series of short chapters which address the relevance, validity and worthiness of the proposed approach. Comments and counter-arguments are then discussed before further chapters illustrate how the proposed change may be achieved in a variety of different contexts – ranging from that of the global financial crisis (which began in 2008) to the inclusion of ethics and sustainability within the accounting curriculum. This book will aid those teaching accounting in universities to improve the design of their accounting degree programmes by moving away from an excessive emphasis on technical skills towards a broader consideration of a liberal contextualisation of the accounting curriculum. This book was originally published as a special issue of *Accounting Education: an international journal*.

With the sixteenth edition of *Financial and Managerial Accounting: The Basis for Business Decisions*, the Williams author team continues to be a solid foundation for students who are learning basic accounting concepts. The critical tradition in accounting historiography has come to occupy a prominent place in the discipline's academic scholarship. Some critical literature has confronted the responsibility of accounting and accountants in precipitating contemporary crises, such as the audit failures that spawned Sarbanes-Oxley and the world-wide recession. Certain contemporary issues have long histories, such as the difficulties encountered by women to break the glass ceiling in public accounting, and the suffering of indigenous peoples under the imperialistic yoke. Other episodes in accounting's long history are seemingly more divorced from the present, but in reality they all have contemporary significance. Slavery in the New World, for example, although abolished more than a century ago, is still rampant in parts of the world, albeit less formally. Critical accounting historians feel it a duty to harken to the "suppressed voices" of the past, those groups of people who had no access to an accounting record - women, persons of color, indigenous populations, alienated proletarians, victims of governmental incompetence and graft, and many voiceless others. Critical Histories of Accounting: Sinister Inscriptions in the Modern Era draws on the foremost work in this developing literature, both that authored by the co-editors of this volume, and that written by others. Editors Richard K. Fleischman, Warwick N. Funnell, and Steve Walker have written extensively about "the dark side of accounting," gauging the complicity of those performing accounting functions in episodes in human history that are at worst evil and at best reprehensible. The editors have also hand-selected a series of historical and contemporary episodes that have been critically investigated by the wider accounting history community, preceded by a thorough introduction.

In this volume, we examine how the institutional environment affects entrepreneurial organizations, and vice-versa. This includes not only how the institutional environment constrains both founding processes and the type of organizations founded, but also how institutional dynamics construct new entrepreneurial opportunities, empower and facilitate action, and how entrepreneurs manipulate the institutional environment to serve their own ends. This institutional approach to entrepreneurship shifts attention away from the personal traits and backgrounds of individual entrepreneurs, and towards how institutions shape entrepreneurial opportunities and actions; how entrepreneurs navigate their cognitive, normative, and regulatory environments; and, how actors modify and build institutions to support new types of organizations.

This treatise examines income as a surrogate for the underlying features of an individual's well-being, for the purpose of achieving horizontal equity in taxation. Part I analyses the development of a variety of income concepts. The foundation concept of income, based on the Schanz-Haig-Simons wealth accrual and consumption models, is found to be the most appropriate measure of income that might be used in tax practice to achieve the equity objective. Other economic concepts of income and accounting and legal concepts of income are tested against the foundation concept as a benchmark to identify their congruence with, and divergence from, that standard. The objective is to seek a route towards the practical application of the foundation concept of income, which improves the existing notion of taxable income. Part II of the book investigates discrepancies between the ways that net receipts and economic gains from selected economic events (business transactions, capital gains transactions, gifting, provision of benefits in kind, and generation of imputed income from owner-use of assets, self performed services and leisure) are included in or excluded from taxable income. The aim is to determine whether the differences are logical and equitable. To enhance tax equity, the thesis advocates the adoption of a comprehensive concept of income, which is closely aligned to the foundation concept of income, for practical taxation purposes. The text draws extensively on case law, particularly from the United Kingdom, Australia, New Zealand, and the United States of America.

An annual prize is awarded for the best paper appearing in Accounting Education: an international journal, and this book contains the prize-winning papers for every year from 1992 to 2012. The journal's primary mission since the first issue was published in March 1992 has been to enhance the educational base of accounting practice, and all the papers in this book relate to that mission. These papers, reporting on research studies undertaken by accounting education scholars from around the world, build on research findings from the broader domain of education scholarship and embrace a wide array of topics – including: curriculum development, pedagogic innovation, improving the quality of learning, and assessing learning outcomes. Of particular interest are three themes, each of which runs through several of the papers: students' approaches to learning and learning style preferences; ethics and moral intensity; and innovation within the accounting curriculum. Accounting educators will find many ideas in the book to help them in enriching their work, and accounting education researchers will be able to identify many points of departure for extending the studies on which the papers report – whether comparatively or longitudinally. This book is a compilation of papers originally published in Accounting Education: an international journal.

The perspective of this book is to present "ethics" as a conversation about how

we decide what is good or bad, right or wrong. It is a collection of conversations employed by educators to assist accounting students in developing their understanding of accounting's ethical aspects and to help them develop into critical thinkers who consider the ethical complexities of the function of accounting in human society. Because we are social beings, ethics is a central human concern, since it involves determining the ethicality of human actions and their effect on other individuals, as well as determining the collective societal acceptance or rejection of an action. Thus, the book's primary goal is to call attention to the intersectionality of accounting and ethics and to encourage students and researchers to consider the ethical implications of accounting decisions. The book contains a diversity of perspectives within which discussions of accountants' and accounting's ethical responsibilities may occur. The contributing authors were deliberately chosen for their diverse perspectives on whence moral guidance for accounting may come. Each chapter stands on its own and represents the thinking of its authors. The book is not a primer on correct behavior for accountants but a place where educators may spur the conversation along.

"As our eyes are drawn upward to the skyline of great cities, it's important to remember that these impressive constructions are able to reach such heights only because their foundations are strong. In much the same way, being successful in the business world begins with fundamental courses like financial and managerial accounting. It is only when students have a firm grasp of concepts like the accounting cycle and managerial decision making that they have a base on which to stand, a strong foundation on which to grow. In this edition, as before, the Williams team has revised the text with a keen eye toward the principle of helping students establish the foundation they will need for future success in business. However, through new coverage of International Financial Reporting Standards and a revised globalization chapter, the Williams book also

introduces students to larger themes and evolving concerns. This dual emphasis allows students to keep their eyes trained upward even as they become solidly grounded in accounting fundamentals"--
