After strong growth in 2017 and early 2018, global economic activity slowed notably in the second half of last year, reflecting a confluence of factors affecting major economies. China's growth declined following a combination of needed regulatory tightening to rein in shadow banking and an increase in trade tensions with the United States. The euro area economy lost more momentum than expected as consumer and business confidence weakened and car production in Germany was disrupted by the introduction of new emission standards; investment dropped in Italy as sovereign spreads widened; and external demand, especially from emerging Asia, softened. Elsewhere, natural disasters hurt activity in Japan. Trade tensions increasingly took a toll on business confidence and, so, financial market sentiment worsened, with financial conditions tightening for vulnerable emerging markets in the spring of 2018 and then in advanced economies later in the year, weighing on global demand. Conditions have eased in 2019 as the US Federal Reserve signaled a more accommodative monetary policy stance and markets became more optimistic about a US–China trade deal, but they remain slightly more restrictive than in the fall.

expansionary fiscal policy will drive the US economy above full employment. Aggregate growth in emerging market and developing economies is projected to firm further, with continued strong growth in emerging Asia and Europe and a modest upswing in commodity exporters after three years of weak performance. Global growth, however, is projected to soften beyond the next couple of years, with most advanced economies likely returning to potential growth rates well below precrisis averages. Growth is projected to remain subpar in several emerging market and developing economies, including in some commodity exporters that continue to face substantial fiscal consolidation needs. Beyond the next few quarters risks clearly lean to the downside. The current recovery offers a window of opportunity to advance policies and reforms that secure the current upswing and raise medium-term growth to the benefit of all.

The first definitive guide to the rapidly expanding multi-manager industry. More than 20 leading practitioners (including product providers, distributors, private and institutional investors, trustees and consultants) provide you with a global overview of the industry.

The rise of women in the workforce has led to many campaigns for wage equality and the impartial treatment of both sexes as they pursue careers previously designated as either a man's or a woman's job. The impact of these campaigns has been felt, but a sense of gender stereotyping still affects not only the social and cultural well-being of the modern organization, but the drive for innovation and economic success as well. Contemporary Global Perspectives on Gender Economics challenges current economic theory, targeting the way gender is often used for economic gain or increased market share. Experts realize that company growth can no longer be achieved by taking a conventional approach, but few follow through with introducing new frameworks that change the way diversity is treated. By acknowledging that

issues like childcare and the wage gap are not only a woman's challenge, this book speaks to legislators and policymakers, economic developers, corporate practitioners, educational faculties, and students of all disciplines who are looking to change the way gender is viewed in the workforce. This essential reference source features chapters that combine the concepts of gender theory, sociology, and economics and cover topics including economic equality, gender bias, the history of gender economics, industrial creativity, and the impact of social connectedness on life satisfaction.

This volume presents work from the IFIP TC 8 WG 8.9 International Conference on the Research and Practical Issues of Enterprise Information Systems (CONFENIS 2007). Enterprise information systems (EIS) have become increasingly popular. EIS integrate and support business processes across functional boundaries in a supply chain environment. In recent years, more and more enterprises world-wide have adopted EIS such as Enterprise Resource Planning (ERP) for running their businesses.
