This Manual offers guidelines for the presentation of monetary and financial statistics. It provides a set of tools for identifying, classifying, and recording stocks and flows of financial assets and liabilities, describes the standard, analytically oriented frame works in which the statistics may be presented, and identifies a set of analytically useful aggregates within those frameworks. The concepts and principles set out in the Manual are harmonized with those of the System of National Accounts 1993.

This volume contains the first twenty chapters (the financial accounting chapters) from Accounting Principles, Third Editioni by the same authors. As in the full book this version has been designed to make the accounting experience interesting and meaningful. Each chapter opens with real-life scenarios that illustrate how accounting relates to students' lives. Provides insight into business, ethics and international problems as well as challenges accountants face and accounting's role in dealing with these issues. Technology in Action boxes demonstrate how computers continue to revolutionize accounting, how they are used in today's accounting practice as well as an idea of what the future holds. Features scores of demonstration problems, self-study questions and exercises.
