Issues for 1919-47 include Who's who in India; 1948, Who's who in India and Pakistan.

This book is based on the papers presented and discussions held at a high-level regional workshop organized by the Asian Development Bank in January 2010 to discuss the impact of the global economic and financial crisis on developing Asia. It provides a clear and thought-provoking analysis of the global economic crisis from the perspective of 19 Asian countries. The papers present concrete ways in which Asian economies and financial systems can be made more responsive and resilient. The book proposes that Asian economies can capitalize on the global economic crisis by using it as an opportunity to move from crisis management to gradually assuming global economic leadership. It spells out a general framework for strengthening recovery efforts, ensuring inclusive growth and open regionalism, rebalancing Asia's growth model, and creating greater regional cooperation for a prosperous and resilient Asia. This is perhaps the first ever book in the market to undertake an in-depth discussion about the impact and the long-term implications of the global financial crisis on economies in Asia.

The book provides readers with a snapshot of the state of the art in the field of nature-inspired computing and its application in optimization. The approach is mainly practice-oriented: each bio-inspired technique or algorithm is introduced together with one of its possible applications. Applications cover a wide range of real-world optimization problems: from feature selection and image enhancement to scheduling and dynamic resource management, from wireless sensor networks and wiring network diagnosis to sports training planning and gene expression, from topology control and morphological filters to nutritional meal design and antenna array design. There are a few theoretical chapters comparing different existing techniques, exploring the advantages of nature-inspired computing over other methods, and investigating the mixing time of genetic algorithms. The book also introduces a wide range of algorithms, including the ant colony optimization, the bat algorithm, genetic algorithms, the collision-based optimization algorithm, the flower pollination algorithm, multi-agent systems and particle swarm optimization. This timely book is intended as a practice-oriented reference guide for students, researchers and professionals.

This book examines how contemporary financial economy evolved as the predominant economic system, and why unabated accumulation of financial capital takes place in such systems. It reviews the mechanics of accumulation of wealth by tracing the historical roots of financial capital. Traversing the evolutions of capitalist systems since the 1850s till recent times, Financial Economy provides a lucid and logical explanation of the phenomenon. It uses a new methodology based on economic circuit of stocks and flows following the early ideas of the French economists of the 18th century and the contemporary Circuit school. It provides an alternative framework for studying economic systems design, keeping aside the orthodox neoclassical analysis of equilibrium market exchange. Further, it highlights the global financial circuit, the state of the current digitalised economy with electronic money transfers, consumer's decision-making and expected future earnings, and questions the relevance of some fundamental concepts of economics as well as economic policies. Using a notion of sequential economy, it also shows how present economic activities are treading upon the future. This book will interest students and researchers of advanced macroeconomics, political economy, heterodox economics, economic history, and evolutionary economics. The historical account of the evolutions of capital, interest, and corporate structures will also be of interest to general readers.

Financial Accounting II has been especially written to meet the requirements of B.Com. students as per the Choice Based Credit System (CBCS) curriculum of University of Kalyani. It comprehensively presents the fundamental concepts and accounting procedures in an informative and systematic manner.

Decision-making is a pivotal function of any manager. A knowledge of Accounting, insofar as it affects decision-making, is very important for a manager. And very often, students find Accounting as one of the 'tough' subjects to handle. This book strives to make Accounting intelligible and easily comprehensible to students. The text gives a comprehensive coverage of the three branches of Accounting – Financial Accounting, Management Accounting, and Cost Accounting. It focuses on the various methods and techniques followed in the Management Reporting System. The text deals, in detail, with various accounting transaction procedures, methods of costing, ratio analysis, budgeting, forecasting, accounting errors, funds flow and cash flow statements, trial balance and balance sheet, and so on. It equips the students with the knowledge in the preparation, analysis, evaluation, and interpretation of financial statements, which will enrich their managerial competence and decision-making skills. KEY FEATURES ? Emphasises the various accounting and decision-making techniques. ? Provides a number of problems and their solutions, besides giving notes, working notes, and exercises, to help the students understand the concepts better. This book is intended as a text for the postgraduate students of Management (MBA/MIB), financial courses (MFC), and undergraduate and postgraduate students of Commerce and those pursuing MCA. In addition, the book will be very useful to practising managers who wish to develop effective and result-oriented decision-making skills.
