Saunders and Cornett's Financial Institutions Management: A Risk Management Approach 7/e provides an innovative approach that focuses on managing return and risk in modern financial institutions. The central theme is that the risks faced by financial institutions managers and the methods and markets through which these risks are managed are becoming increasingly similar whether an institution is chartered as a commercial bank, a savings bank, an investment bank, or an insurance company. Although the traditional nature of each sector's product activity is analyzed, a greater emphasis is placed on new areas of activities such as asset securitization, off-balance-sheet banking, and international banking.

"The last 30 years have been dramatic for the financial services industry. In the 1990s and 2000s, boundaries between the traditional industry sectors, such as commercial banking and investment banking, broke down and competition became increasingly global in nature. Many forces contributed to this breakdown in interindustry and intercountry barriers, including financial innovation, technology, taxation, and regulation. Then in 2008-2009, the financial services industry experienced the worst financial crisis since the Great Depression. Even into the mid-2010s, the U.S. and world economies have not recovered from this crisis. It is in this context that this book is written. As the economic and competitive environments change, attention to profit and, more than ever, risk become increasingly important. This book offers a unique analysis of the risks faced by investors and savers interacting through both financial institutions and financial markets, as well as strategies that can be adopted for controlling and

This book contains selected and revised papers of the European Symposium on Adaptive and Learning Agents and Multi-Agent Systems (ALAMAS), editions 2005, 2006 and 2007, held in Paris, Brussels and Maastricht. The goal of the ALAMAS symposia, and this associated book, is to increase awareness and interest in adaptation and learning for single agents and multi-agent systems, and encourage collaboration between machine learning experts, software engineering experts, mathematicians, biologists and physicists, and give a representative overview of current state of affairs in this area. It is an inclusive forum where researchers can present recent work and discuss their newest ideas for a first time with their peers.

The symposia series focuses on all aspects of adaptive and learning agents and multi-agent systems, with a particular emphasis on how to modify established learning techniques and/or create new learning paradigms to address the many challenges presented by complex real-world

problems. These symposia were a great success and provided a forum for the presentation of new ideas and results bearing on the conception of adaptation and learning for single agents and multi-agent systems. Over these three editions we received 51 submissions, of which 17 were carefully selected, including one invited paper of this year's invited speaker Simon Parsons. This is a very competitive acceptance rate of approximately 31%, which, together with two review cycles, has led to a high-quality LNAI volume. We hope that our readers will be inspired by the papers included in this volume.

By and large, EU financial integration has been a success story. Still, the reform agenda is far from finished. What are the remaining challenges? What are the gains of closer financial market integration? This IMF book tracks the European Union's journey along the path to a single financial market and identifies the challenges and priorities that remain ahead. It pays particular attention to the most recent integration efforts in the European Union following the introduction of the euro. The study looks at the importance of financial integration, in particular for economic growth, the interplay between banks and markets, and equity market integration. It closely examines the relationship between financial integration and financial stability. This interaction presents the European Union with a challenge, but also with the opportunity to play a pioneering role in developing a regional approach to financial stability that could provide lessons for the rest of the world.

The Czech Yearbooks Project, for the moment made up of the Czech Yearbook of International Law® and the Czech (& Central European) Yearbook of Arbitration®, began with the idea to create an open platform for presenting the development of both legal theory and legal practice in Central and Eastern Europe and the approximation thereof to readers worldwide. This platform should serve as an open forum for interested scholars, writers, and prospective students, as well as practitioners, for the exchange of different approaches to problems being analyzed by authors from different jurisdictions, and therefore providing interesting insight into issues being dealt with differently in many different countries.
