"The last 30 years have been dramatic for the financial services industry. In the 1990s and 2000s, boundaries between the traditional industry sectors, such as commercial banking and investment banking, broke down and competition became increasingly global in nature. Many forces contributed to this breakdown in interindustry and intercountry barriers, including financial innovation, technology, taxation, and regulation. Then in 2008-2009, the financial services industry experienced the worst financial crisis since the Great Depression. Even into the mid-2010s, the U.S. and world economies have not recovered from this crisis. It is in this context that this book is written. As the economic and competitive environments change, attention to profit and, more than ever, risk become increasingly important. This book offers a unique analysis of the risks faced by investors and savers interacting through both financial institutions and financial markets, as well as strategies that can be adopted for controlling and better managing these risks. Special emphasis is also put on new areas of operations in financial markets and institutions such as asset securitization, off-balance-sheet activities, and globalization of financial services"--

This book provides an up-to-date discussion of the UK financial system and the changes affecting it. The Twenty First Century has witnessed a sea-change in regulation of the financial system following the financial crisis of 2007-8. Prior to the financial crisis in 2007-8 the official policy was directed to deregulating the financial system, whereas post 2008 the move is towards increased regulation. This caused changes in the nature and behaviour of the institutions and the regulatory authorities, with the result that existing texts quickly become dated. The aim of this book is to bring the discussion right up-to date. Coverage includes a critique of the UK financial institutions and markets as well as regulation emanating both from within the UK and also from supranational bodies such as the Bank for International Settlements and the EU. The discussion is based on both the underlying theory as well as the operating practices of the institutions and markets. Each supplemented by a comprehensive glossary, the book is subdivided into three main sections plus introductory and concluding chapters. These sections cover i) financial institutions ii) financial markets and iii) regulation of banks and other financial institutions. The advantage of this structure is that the book can be used for a full course on the UK financial system or for the individual components on a modular basis. Each chapter contains comprehensive statistics to supplement the narrative. The book will be essential reading to lecturers and undergraduate students enrolled on courses in financial economics and banking.
