

The study of financial analysis is a demanding mix of interdisciplinary techniques which incorporates a broad spectrum of methodologies and theories drawn from finance, economics, statistics, accounting, strategy and sociology. In Financial Analysis these eclectic disciplines are woven together to explain how to analyse and interpret financial information for the purpose of assessing the performance and prospects of a company. Research evidence concerning the behaviour of firms, financial information and financial analysis provides the backbone of this new edition; recent important theoretical developments are also included. Coverage of the basic knowledge and skills is followed by their application to various analytical tasks including merger analysis, bankruptcy prediction, investment decisions, and social and environmental reporting. The text is written for advanced undergraduates, MBA and other postgraduate students of accounting, finance, business, economics and financial economics on courses in financial analysis, financial statement analysis and accounting theory.

An exploration of the link between current financial statement analysis theory and practice. Using one entire annual report and two complete financial statements the book requires students to analyze the statements from the perspectives of investors, creditors, managers, auditors and analysts. Graphs, charts and tables are also used to relate topics to business practice using information from annual reports, surveys of business practices and specialist reports of investors and credit agencies.

This book provides a comprehensive treatment of credit risk assessment and credit risk rating that meets the Advanced Internal Risk-Based (AIRB) approach of Basel II. Credit risk analysis looks at many risks and this book covers all the critical areas that credit professionals need to know, including country analysis, industry analysis, financial analysis, business analysis, and management analysis. Organized under two methodological approaches to credit analysis—a criteria-based approach, which is a hybrid of expert judgement and purely mathematical methodologies, and a mathematical approach using regression analysis to model default probability—the book covers a cross-section of industries including passenger airline, commercial real estate, and commercial banking. In three parts, the sections focus on hybrid models, statistical models, and credit management. While the book provides theory and principles, its emphasis is on practical applications, and will appeal to credit practitioners in the banking and investment community alongside college and university students who are preparing for a career in lending.

Although introductions to courses in finance exist for a variety of fields, Robert W. Kaps provides the first text to address the subject from an aviation viewpoint. Relying on his vast experience--twenty-plus years in the airline industry and more than thirty years in aviation--Kaps seeks not only to prepare students for careers in the aviation field but also to evoke in these students an excitement about the business. Specifically, he shows students how airlines, airports, and aviation are financed. Each chapter contains examples and illustrations and ends with suggested readings and references. Following his discussion of financial management and accounting procedures, Kaps turns to financial management and sources of financial information. Here he discusses types of business organizations, corporate goals, business ethics, maximizing share price, and sources of financial information. Kaps also covers debt markets, financial statements, air transport sector revenue generation, and air transport operating cost management, including cost administration and labor costs, fuel, and landing fees and rentals. He describes in depth air transport yield management systems and airport financing, including revenues, ownership, operations, revenue generation, funding, allocation of Air Improvement Program funds, bonds, and passenger facility charges. Kaps concludes with a discussion of the preparation of a business plan, which includes advice about starting and running a business. He also provides two typical business plan outlines. While the elements of fiscal management in aviation follow generally accepted accounting principles, many nuances are germane only to the airline industry. Kaps provides a basic understanding of the principles that are applicable throughout the airline industry.

Financial Accounting Theory and Analysis: Text and Cases, 13th Edition illustrates how accounting standards impact the daily decisions of accounting professionals. This authoritative textbook shows how accounting theory explains why particular companies select certain accounting methods over others, and predicts the attributes of firms by analyzing their accounting methods. The text examines empirical research relevant to various theories of accounting and the uses of accounting information, including the fundamental analysis model, the efficient markets hypothesis, the behavioral finance model, the positive accounting theory model, the human information processing model, and the value creation model. Enabling students to develop an informed perspective on accounting theory, the text reviews the development and current state of accounting theory and summarizes current disclosure requirements for various financial statement items. The new edition has been fully revised to reflect current methods of accounting education, including the incorporation of ethics into the curriculum, the analysis of a company's quality of earnings and sustainable income, the use of the internet as a source of information, the international dimensions of accounting, and more. Designed for undergraduate and graduate accounting majors, the text aligns with the latest curriculum changes in the CPA exam.

This first Asia-Pacific edition of Reilly/Brown's Investment Analysis and Portfolio Management builds on the authors' strong reputations for combining solid theory with practical application and has been developed especially for courses across the Australia, New Zealand, and Asia-Pacific regions. The real-world illustrations and hands-on activities enhance an already rigorous, empirical approach to topics such as investment instruments, capital markets, behavioural finance, hedge funds, and international investment. The

text also emphasises how investment practice and theory are influenced by globalisation.
