However, different financial instruments can sustain the business and deal with the difficulties of payment when sales reduce and uncertainty increases; thus, research is essential in this critical area. When economic downturn affects the financial markets, the role of banks, country dynamics, the economy, and many other facets of the business world, financial management becomes the key for business recovery. The Handbook of Research on Financial Management During Economic Downturn and Recovery shares relevant knowledge on challenges and opportunities caused by crises, such as the pandemic, and the effects on economic and financial arenas. The chapters cover topics such as business models to understand how companies react to pandemic and crises situations, as well as how they change their management and way of conducting business. Other important topics include sustainable development, international financial markets, capital structure changes, uncertainty and risk, and governance and leadership. This book is ideal for shareholders, directors and managers, economists, researchers, academics, practitioners, stakeholders, researchers, academicians, and students interested in knowledge on topics about challenges in the way that companies, financial markets, financial institutions, and governments respond to risk and uncertainty.

There have been numerous studies on depression and cognitive impairment and dementia. However, the neural correlates of depression and cognitive impairment have not yet been elucidated. With the development of neuroscience and relevant technologies, studies on anatomical and functional neural networks, neurobiological mechanisms of mood and cognition in old age will provide more insight into the potential diagnosis, prevention and intervention in depression and cognitive impairment. For example, longitudinal neuroimaging studies depicting the trajectories of patterns of structural and functional brain networks of mild cognitive impairment may provide potential imaging markers for the onset of dementia. Population-based studies have addressed the potential interaction between mood and cognitive impairment in old age. However, there are few studies to explore the potential neural mechanism of the relationship between depression and cognitive impairment in old age. In all of this process the contribution of multiple biological events cannot be neglected, particularly the underlying influence of chronic diseases and concomitant polymedication as well as the geriatric conditions, like frailty, frequently present in this elderly population, which also compromise the cognitive function and mood determining depression and conducting to worse outcomes with more morbidity and mortality.
