fitted to the MGB and MGB GT. Provides advice on MGB/MGB GT suspension, brakes and dyno tuning. This classic has been completely updated for the second edition. John Robinson, the Technical Editor of 'Performance Bikes', explains how various stages of engine tune are reached, and describes typical development work with enough theory to devise a practical development programme. The phenomena described are all known to work - the trick is making them all work together. Engine development is slow and expensive, but the results can be very rewarding, both in competition and in the sheer pleasure of using a motor which is crisp and perfectly set up. Although it is not possible to make all-round engine improvements, other than those gained by careful assembly to the exact stock tolerances, improvements in one area can be 'traded' for losses in another: increases in high-speed power balanced perhaps against losses in low-speed power, engine flexibility and reliability. John Robinson takes the reader through the processes which are necessary to make your four-stroke run perfectly. This third edition, in the same tradition as the second, is a vital servicing tool containing information covering virtually every motorcycle over 50cc sold in the UK since 1980. The author is technical editor of 'Performance Bikes' and author of the well known 'Motorcycle Tuning' books. The book provides access to the most frequently used data for dealers, mechanics and enthusiasts who have to deal with a wide variety of machines and wish to compare the features of different models. A separate section lists conversion tables, standard torque settings for threaded fasteners, tyre size codes, tyre speed and load schedules and addresses of importers. Machines are listed alphabetically by manufacturer and then in order of capacity or model number.
