Renowned Berklee College of Music faculty guitarist Jon Finn, combines his experience, education, and stylistic versatility in this eclectic series of lessons for aspiring rock guitarists. Jon's innovative approach is unique, fun, and challenging. The book/audio set and video both offer a well researched original take on the use of pentatonic scales in rock improvisation. Using his "Warp Refraction Principle" which takes into account the major third tuning interval between the second and third strings, Jon presents a series of five vertical patterns applied in two-string increments throughout the fretboard. The philosophy behind this project is to present concepts and techniques as a thought process rather than simply providing a reference manual. Includes access to online audio and video.

Now in one volume, much of what the novice classical guitarist will need to know to place him or her on the recital stage. From proper Instrument care and maintenance to the necessary technical skills, musical mindset and the standard repertoire?all is exposed and explored in enough detail and insight that the student will wish to keep this book close at hand for years to come top serve as a ready reference source.

This book is designed to be useful for guitarists at any skill level. Beginners can use it as an introduction to the foundational concepts of the instrument, intermediate players can use it for training and theoretical work, and advanced players can explore the sections on advanced theory, extended technique andthe exhaustive tables of melodic and rhythmic possibilities.It is divided into two parts: pitch and rhythm. Part 1 (pitch) begins with the properties of string, harmonics, and tuning systems. It then moves methodically through pitch information, beginning with locating all versions of a single pitch, building pentatonic, heptatonic, and all possible symmetrical scales. This is followed by a study of intervals, with all possible locations of every two pitches, and a long study that

moves through every possible fingering of three pitches, with a series of exercises to master triadic syntax. Part 1 closes with a study of four-pitch structures and complete tables that show all possible pitch sets in circular visual notation. Part 2 (rhythm) begins with a complete course in "Symmetrical Picking," a method based on drum rudiments that builds control in the picking hand through an exhaustive variety of movements. The focus of this section is building a strong rhythmic foundation, with a focus on efficiency, accuracy, speed, dynamics, and groove. It is followed by a study of legato playing, working with ornaments and slides. The study of playing with fingers on multiple strings takes up the remainder of the book. This begins with the study of pulse against pulse, playing two simultaneous tempos. The book concludes with a study of polyrhythm, playing one rhythm against another. Plain English is used as much as possible to describe theoretical concepts, and hundreds of illustrations were made for the book as an aid to those who either don't speak English or prefer to think visually. This approach is designed to be inclusive and to promote creative practice. The main idea of the book is described in this passage (page 154): "Even in this small area there is a lot of material, potentially a lifetime of study. The amount of information can feel overwhelming to students at any level. For this reason, the book is designed for self-directed practice, with an emphasis on what the player
