

The second edition of Analytical Chemistry for Technicians provides the "nuts and bolts" of analytical chemistry and focuses on the practical aspects for training a technician-level laboratory worker. This edition presents new and expanded chapters, innumerable questions and problems, and modified experiments that present a fresh and challenging approach. Some of the topics that have been expanded include chemical equilibrium, chromatography, Kjeldahl method, and molarity and moles where EDTA and water hardness calculations are concerned. New discussions of the Ag/AgCl and combination pH electrodes have been added, while the discussion of ion-selective electrodes has been expanded. The chapter introducing instrumental analysis and computers now includes discussions of "y = mx + b" and the method of least squares. The book also includes discussions of FTIR, topics of NMR, and mass spectrometry, which are found in the new infrared spectrometry chapter.

1. Introduction 1; 2. Errors in chemical analyses 11; 3. Random errors in analyses 21; 4. Application of statistics to data treatment and evaluation 47; 5. Gravimetric methods of analysis 71; 6. Titrimetric methods of analysis 100; 7. Aqueous-solution chemistry 122; 8. Effects of electrolytes on ionic equilibria 148; 9. Application of equilibrium calculations to complex systems 159; 10. Theory of neutralization titrations 189; 11. Titration curves for complex acid-base systems 224; 12. Applications of neutralization titrations 248; 13. Precipitation titrimetry 266; 14. Complex-formation titrations 278; 15. An introduction to electrochemistry 303; 16. Applications of standard electrode potentials 330; 17. Applications of oxidation-reduction titrations 360; 18. Theory of potentiometry 386; 19. Applications of potentiometry 412; 20. Electrogravimetric and coulometric methods 431; 21. Voltammetry 460; 22. An introduction to spectrochemical methods 497; 23. Instruments for optical spectrometry 527; 24. Molecular absorption spectroscopy 557; 25. Molecular fluorescence spectroscopy 601; 26. Atomic spectroscopy based on ultraviolet and visible radiation 611; 27. Kinetic methods of analysis 637; 28. An introduction to chromatographic methods 660; 29. Gas-liquid chromatography 686; 30. High-performance liquid chromatography 701; 31. The analysis of real samples 725; 32. Preparing samples for analysis 736; 33. Decomposing and dissolving the sample 749; 34. Eliminating interferences 760; 35. The chemicals, apparatus, and unit operations of analytical chemistry 778; 36. Selected methods of analysis 812.

PRINCIPLES OF INSTRUMENTAL ANALYSIS is the standard for courses on the principles and applications of modern analytical instruments. In the 7th edition, authors Skoog, Holler, and Crouch infuse their popular text with updated techniques and several new Instrumental Analysis in Action case studies. Updated material enhances the book's proven approach, which places an emphasis on the fundamental principles of operation for each type of instrument, its optimal area of application, its sensitivity, its precision, and its limitations. The text also introduces students to elementary analog and digital electronics, computers, and the treatment of analytical data. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This Cengage Technology Edition is the result of an innovative and collaborative development process. The textbook retains the hallmark approach of this respected text, whilst presenting the content in a print and digital hybrid that has been tailored to meet the rapidly developing demands of today's lecturers and students. This blended solution offers a streamlined textbook for greater

accessibility and convenience, complemented by a bolstered online presence, for a truly multi-faceted learning experience. Skoog and West's Fundamentals of Analytical Chemistry provides a thorough background in the chemical principles that are particularly important to analytical chemistry. Students using this book will develop an appreciation for the difficult task of judging the accuracy and precision of experimental data and to show how these judgements can be sharpened by applying statistical methods to analytical data. The book introduces a broad range of modern and classic techniques that are useful in analytical chemistry; as well as giving students the skills necessary for both obtaining data in the laboratory and solving quantitative analytical problems. Known for its readability and systematic, rigorous approach, this fully updated FUNDAMENTALS OF ANALYTICAL CHEMISTRY, 9E, International Edition offers extensive coverage of the principles and practices of analytic chemistry and consistently shows students its applied nature. The book's award-winning authors begin each chapter with a story and photo of how analytic chemistry is applied in industry, medicine, and all the sciences. To further reinforce student learning, a wealth of dynamic photographs by renowned chemistry photographer Charlie Winters appear as chapter-openers and throughout the text. Incorporating Excel spreadsheets as a problem-solving tool, the Ninth Edition is enhanced by a chapter on Using Spreadsheets in Analytical Chemistry, updated spreadsheet summaries and problems, an "Excel Shortcut Keystrokes for the PC" insert card, and a supplement by the text authors, EXCEL® APPLICATIONS FOR ANALYTICAL CHEMISTRY, which integrates this important aspect of the study of analytical chemistry into the book's already rich pedagogy. New to this edition is OWL, an online homework and assessment tool that includes the Cengage YouBook, a fully customizable and interactive eBook, which enhances conceptual understanding through hands-on integrated multimedia interactivity.

Analytical Chemistry Has Made Significant Progress In The Last Two Decades. Several Methods Have Come To The Forefront While Some Classical Methods Have Been Relegated. An Attempt Has Been Made In This Edition To Strike A Balance Between These Two Extremes, By Retaining Most Significant Methods And Incorporating Some Novel Techniques. Thus An Endeavour Has Been Made To Make This Book Up To Date With Recent Methods. The First Part Of This Book Covers The Classical Volumetric As Well As Gravimetric Methods Of Analysis. The Separation Methods Are Prerequisite For Dependable Quantitative Methods Of Analysis. Therefore Not Only Solvent Extraction Separations But Also Chromatographic Methods Such As Adsorption, Partition, Ion- Exchange, Exclusion And electro Chromatography Have Been Included. To Keep Pace With Modern Developments The Newly Discovered Techniques Such As Ion Chromatography, Super-Critical Fluid Chromatography And Capillary Electrophoresis Have Been Included. The Next Part Of The Book Encompasses The Well Known Spectroscopic Methods Such As Uv, Visible, Ir, Nmr, And Esr Techniques And Also Atomic Absorption And Plasma Spectroscopy And Molecular Luminescences Methods. Novel Analytical Techniques Such As Auger, Esca And Photo Acoustic Spectroscopy Of Surfaces Are Also Included. The Final Part Of This Book Covers Thermal And Radioanalytical Methods Of Analysis. The Concluding Chapters On Electroanalytical Techniques Include Potentiometry, Conductometry. Coulometry And Voltametry Inclusive Of All Kinds Of A Polarography. The Theme Of On Line Analysis Is Covered In Automated Methods Of Analysis. To Sustain The Interest Of The Reader Each Chapter Is Provided With Latest References To The Monographs In The Field. Further, To Test The Comprehension Of The Subject Each Chapter Is

Oxidation/Reduction Titrations 173 (8) 21 Potentiometry 181 (10) 22 Bulk Electrolysis: Electrogravimetry and Coulometry 191 (8) 23 Voltammetry 199 (4) 24 Introduction to Spectrochemical Methods 203 (5) 25 Instruments for Optical Spectroscopy 208 (3) 26 Molecular Absorption Spectroscopy 211 (9) 27 Molecular Fluorescence Spectroscopy 220 (3) 28 Atomic Spectroscopy 223 (5) 29 Kinetic Methods of Analysis 228 (6) 30 An Introduction to Analytical Separations 234 (7) 31 Gas Chromatography 241 (3) 32 High-Performance Liquid Chromatography 244 (3) 33 Miscellaneous Separation Methods 247 (2) 35 Preparing Samples for Analysis 249 (1) 36 Decomposing and Dissolving the Sample 250.
