Fundamentals of Corporate Finance, 2nd Edition offers an innovative integration of conceptual understanding and problem-solving ... of intuition and decision-making ... of the authors' industry and classroom/research experience ... with current real-world examples and online practice. Authors Robert Parrino, David Kidwell, and Thomas Bates believe that students who understand the intuition underlying the basic concepts of finance are better able to develop the critical judgments necessary to apply financial tools in real decision-making situations. Their text develops intuitive thinking while simultaneously helping students develop problem solving and computational skills. It then shows students how to apply intuition and analytical skills to decision making while integrating it all with valuation and building shareholder value.

Research Paper from the year 2012 in the subject Business economics - Investment and Finance, grade: 20, University of St Andrews, course: Corporate Finance, language: English, abstract: This report aims to evaluate the validity of corporate financial practices in the under-researched auto parts industry, additionally considering the ownership structure of companies because of a division in share distribution. Recent economic struggles have impacted the automobile industry, resulting in stagnating sales on a global scale (Haugh et al, 2010). This affects the auto parts industry, a direct supplier to automobile companies, aftermarket and exchange parts. Rising raw material costs have increased the pressure on auto parts manufacturers, as buyers disallow price increases. Market stimulus, mostly from Asia-Pacific, is forecast to increase total parts market by 20% by 2015 (Datamonitor, 2011).

Seminar paper from the year 2018 in the subject Business economics - Investment and Finance, , course: Corporate Finance, language: English, abstract: This report is prepared with an intention to make capital structure and dividend policy analysis of the assigned two firms which are FU-WANG food limited and Rangpur dairy and food limited who are the participants of food

companies in Japan. The author found that in Japan the introduction of stock options had neither a positive impact on profitability nor the negative side effects of promoting risk-taking behaviors. Furthermore, he found that corporate diversification and division of corporations showed negative impacts on profitability. The corporate governance structure of Japan has exhibited a large change from the second half of the 1990s to the present. There have been institutional reforms involving enterprise law, such as the introduction of stock options and the removal of the ban on holding companies. With respect to the ownership structure of a company, discernible trends are that the equity holdings of financial institutions and business corporations have fallen while the presence of foreign stockholders has risen. These trends are often pointed out as signs that the Japanese corporate governance structure has been approaching the American model and that this will energize Japanese firms. The author contradicts common academic theories, however, and concludes that the formation of the corporate governance which emphasizes the agency problem between shareholders and corporate managers is inadequate. He suggests that an institutional arrangement for a corporate governance system that values a variety of stakeholders' interests is greatly needed and concludes that perspectives on maximizing surplus values for various stakeholders and distributing the surpluses appropriately among the stakeholders will become increasingly important for the purpose of managing corporations.

Global Development Finance (GDF), is the World Bank's annual review of recent trends in and prospects for financial flows to developing countries. It is an indispensable resource for governments, economists, investors, financial consultants, academics, bankers, and the entire development community. The impact of the economic downturn and the increase in financial scandals emerging from major corporations has generated a growing interest in governance issues and has emphasized the need for companies to be transparent in their dealings with shareholders and the markets. Although the issues in Asia are fundamentally similar to those in the rest of the world, there are some crucial differences in the way in which Asian corporations acknowledge and confront these issues and in the political and legal frameworks under which they operate. Using examples of good and bad governance, Roche analyzes if the Asian approach to governance issues is unique. Business and finance students, as well as executives with an interest in Asian business or corporate governance will find this an authoritative and insightful guide to this complex and important topic.

A detailed look at the importance of corporate governance in today's business world The importance of corporate governance became dramatically clear at the beginning of the twenty-first century as a series of corporate meltdowns from managerial fraud, misconduct, and negligence caused a massive loss of shareholder wealth. As part of the Robert W. Kolb Series in Finance, this book provides a comprehensive view of the shareholder-manager relationship and examines the current state of governance mechanisms in mitigating the principal-agent conflict. This book also offers informed suggestions and predictions about the future direction of corporate governance. Relies on recent research findings to provide guidance through the maze of theories and concepts Uses a structured approach to put corporate governance in perspective Addresses essential issues related to corporate governance including the idea of principal-agent conflict, role of the board of directors, executive compensation, corporate monitoring, proxy contests and corporate takeovers, and regulatory intervention Corporate governance is an essential part of mainstream finance. If you need to gain a better understanding of this topic, look no further than this book.

This book is a collection of high-impact papers accepted and presented at the 2019 Vietnam's Business and Economics Research Conference (VBER2019) organised by Ho Chi Minh City Open University held on 18th–20th July 2019. The Special Issue is associated with a broad coverage of the contemporary issues in Business and Economics in Vietnam and other emerging markets reflecting a key theme of VBER2019: Vietnam's Place in the Asia Pacific Region. A total of 14 papers were published from more than the 120 submissions to the VBER2019 Conference. Published papers had been undergone a rigorous reviewing process conducted by the Journal of Risk and Financial Management. The papers incorporated in this book address contemporary issues in business and economics from Vietnam and other emerging markets in the Asian region from various angles such as economics, finance, and statistics to management science. At the time of writing this note, some of the papers have attracted more than 1000 downloads in 3 months. In particular, a paper on "Foreign Direct Investment and Economic Growth from Developing Countries in the Short Run and Long Run" by Trang Thi-Huyen Dinh and her team has attracted almost 6000 downloads in 3 months. These statistics indicate that the papers published in this Special Issue have attracted the wide interest of readers. Among these 14 published papers, three main areas of important contemporary issues in Business and Economics in the Asian region can be identified. First, a block of papers deals with various important and fundamental issues in the emerging markets the Asian region, from exchange rate regime, financial inclusion, and financial development to energy consumption and environmental degradation. On the issue of CO2 emissions, energy consumption and economic growth in the ASEAN, Vo, Vo, and Le utilized various time series econometrics approaches. Key findings from this paper indicate that there are no long-run relationships among carbon dioxide (CO2) emissions, energy consumption, renewable energy, population growth, and economic growth in the Philippines and Thailand, but a relationship does exist in Indonesia, Myanmar, and Malaysia. Loo, in his paper on financial inclusion for the ASEAN, concluded that advancing internet capability and availability present investors an opportunity to offer financial technology or Fintech to meet the need for financial services in this digital era. Second, a challenge in quantitative studies for a single country, such as Vietnam, with limited data is generally noted. However, various empirical studies on Vietnam's business and economics issues have been conducted. Nguyen, Quan, and Pham examined the cultural distance and entry mode of foreign direct investment in Vietnam. A key finding from their paper is that when there is a great cultural difference between Vietnam and their home country, foreign-invested firms prefer wholly owned subsidiaries over equity joint ventures. Within the Vietnamese market, Pham, Vo, Ho, and McAleer conducted a study on the issue of corporate financial distress. The authors conclude

that the corporate financial distress prediction model, which includes accounting factors with macroeconomic indicators, performs much better than alternative models. In addition, the evidence confirms that the global financial crisis (GFC) had a damaging impact on each sector, with the Health & Education sector demonstrating the most impressive recovery post-GFC, and the utilities sector recording a dramatic increase in bankruptcies post-GFC. At another extreme of the spectrum, Van and Nguyen considered that competitive context, social influences, the understanding of managers about corporate social responsibility (CSR), and the internal environment of companies are the four drivers of CSR. The authors also argued that in the four drivers, competitive context has the strongest impact on adopting CSR. Third, last but not least, various papers focus on an important aspect of public finance. For an example, Pham, Pham, and Ly documented the effect of double taxation treaties on the bilateral trade of Vietnam with ASEAN member states, thereby making an extensive comparison with its EU partner countries. Their findings indicate the significant contributions of the tax treaties to Vietnam's trade performance, not exclusively with ASEAN but also with EU partner countries. In addition, regarding public finance for Vietnam, Nguyen, Vo, Ho, and Vo investigated the contribution of fiscal decentralisation to economic growth across provinces in Vietnam. For the first time in Vietnam, the fiscal decentralisation index together its two subcomponents, including fiscal importance and fiscal autonomy, are developed. Findings from this paper indicate that while fiscal importance and an overall level of fiscal decentralisation have provided negative impact on provincial economic growth, fiscal autonomy has a positive impact on economic growth across provinces in Vietnam. The authors began writing the First Edition of this textbook in early 1988. It took almost 10 years to complete this effort, because they did not want to write an ordinary textbook. Their goal was to write a book that would break new ground in both the understanding and explanation of finance and its practice. They wanted to write a book that would influence the way people think about, teach, and practice finance. A book that would elevate the level of discussion and analysis in the classroom, in the corporate boardroom, and in the conference rooms of Wall Street firms. They wanted a book that would sit on the shelves of financial executives as a useful reference manual, long after the executives had studied and received a degree. They were successful in their endeavor. The success of the first edition of Financial Markets and Corporate Strategy was very heartening. The market for this text has expanded every year, and it is well-known as the cutting edge textbook in corporate finance around the world. The book is used in a variety of courses, both for introductory courses and advanced electives. Some schools have even changed their curriculum to design it around this text. The authors have developed this Second Edition based on the comments of many reviewers and colleagues; producing what is a more reader-friendly book. The most consistent comment from users of the first edition was a request for a chapter on the key ingredients of valuation: accounting, cash flows, and basic discounting. This ultimately led to a new chapter in the text, Chapter 9, which is currently available in the "Sample Chapter" section of the book's website. In almost every chapter, examples are updated, vignettes changed, numbers modified, statements checked for currency and historical accuracy, and exercises and examples are either modified or added to. The goal of the Second Edition is to make the book ever more practical, pedagogically effective, and current.

Due to changing business scenarios, companies need to manage their economic resources efficiently to secure a stable position in the market. This is possible when financial management techniques are blended with strategic management concepts. This book discusses the basics of strategic management as well as financial management and explains how businesses can formulate strategies to pursue their financial objectives and strengthen their financial position. The book is divided into five sections. Section I introduces students to the fundamentals of strategic management and financial management. Section II explains the techniques of portfolio tools, Markowitz modern portfolio theory, capital asset pricing model, factor models and arbitrage pricing theory. Section III discusses investment decision under risk and uncertainty, corporate strategy and high technology investment. Section IV focuses on tools and techniques of analysis and interpretation of financial statements, corporate valuation and value-based management. Section V dwells on contemporary issues in strategic financial management such as corporate restructuring, mergers and acquisitions. The book is intended as a text for postgraduate students of management. In addition, students pursuing professional courses such as chartered accountancy, MFC, as well as professionals in the corporate sector will find the book useful. This book is distinct; it focuses, instead, on the impact of such crises on the corporate sector, particularly: How a national economic crisis impacts companies in the affected country How companies respond to such a crisis How companies can evaluate key strategic options in an economic environment that is changing every day How companies undertake drastic financial and business portfolio restructuring in a crisis environment Finally, what determines the vulnerability of a company to a national economic crisis? This book seeks to find answers to such questions through case studies of six East Asian companies located in Indonesia, Thailand, South Korea and Malaysia, and belonging to varied industrial sectors: banking, finance, natural resources, and a diversified conglomerate. The actions of the companies encompassed corporate and financial restructuring, investment banking, financing decisions and derivatives. As backdrop, the book presents a brief economic history of the four countries involved covering the period till the 1997 meltdown. Individual discussions on each of the six companies in the last part of the book provide both a framework of analysis, and information and insights about how these companies actually managed under the economic crisis; raising issues and offering lessons that are relevant to corporate finance managers and chief executives world-wide.
