This practical, accessible resource will help future and practicing teachers integrate literature into their middle school or high school classrooms, while also addressing content area standards and improving the literacy skills of their students. Two introductory chapters are followed by five chapters that each cover a different genre: Chapter 3, Informational Books; Chapter 4, Fiction; Chapter 5, Biography, Autobiography, and Memoir; Chapter 6, Poetry; and Chapter 7, How-to and Hands-on Books. Each genre chapter consists of four parts: Part 1: Discusses the genre and how content area teachers can use books within that genre to further content learning and enhance literacy skills. Part 2: Offers hands-on instructional strategies and activities using literature, with activities for use in a variety of disciplines. Part 3: Presents individual author studies (three or four per chapter) with bibliographies and guidelines for using the authors' books in content area courses. Part 4: Features an annotated bibliography of specially selected children and young adult literature for that genre, organized by content area. The annotations provide information about the book, which can be used to prepare booktalks, and teaching ideas for using in a specific content area. Altogether these sections contain more than 600 annotated entries tabbed by subject area, including art, English/language arts, languages and culture, math and technology, music, PE/health, science, and social studies/history.

The SHSAT is changing! Starting in October 2017, students will take the new version of the New York City SHSAT. The redesigned test will not include scrambled paragraphs or logical reasoning. Look for Kaplan's SHSAT Prep 2018-2019, ISBN 978-1-5062-2143-4, on sale August 1, 2017.

The intent of this book is to provide a guide for parents to help them navigate the thirteen years of their children's math education (K-12). The book will provide parents with the knowledge and skills they will need to proactively advocate for their children's preparation for the 21st century workforce.

This book is about some of the basic ideas in mathematics that people are likely to encounter in the normal course of their lives. It is about money-statistics, relations, probability graphs, decision making, codes, logic, languages, and much more. It was written to help people develop their mathematical problem solving skills and to help them see how mathematics is a part of modern society.

Dive Into Algorithms is a broad introduction to algorithms using the Python Programming Language. Dive Into Algorithms is a wide-ranging, Pythonic tour of many of the world's most interesting algorithms.

With little more than a bit of computer programming experience and basic high-school math, you'll explore standard computer science algorithms for searching, sorting, and optimization; human-based algorithms that help us determine how to catch a baseball or eat the right amount at a buffet; and advanced algorithms like ones used in machine learning and artificial intelligence. You'll even explore how ancient Egyptians and Russian peasants used algorithms to multiply numbers, how the ancient Greeks used them to find greatest common divisors, and how Japanese scholars in the age of samurai designed algorithms capable of generating magic squares. You'll explore algorithms that are useful in pure mathematics and learn how mathematical ideas can improve algorithms. You'll learn about an algorithm for generating continued fractions, one for quick calculations of square roots, and another for generating seemingly random sets of numbers. You'll also learn how to:

- Use algorithms to debug code, maximize revenue, schedule tasks, and create decision trees
- Measure the efficiency and speed of algorithms
- Generate Voronoi diagrams for use in various geometric applications
- Use algorithms to build a simple chatbot, win at board games, or solve sudoku puzzles
- Write code for gradient ascent and descent algorithms that can find the maxima and minima of functions
- Use simulated annealing to perform global optimization
- Build a decision tree to predict happiness based on a person's characteristics

Once you've finished this book you'll understand how to code and implement important algorithms as well as how to measure and optimize their performance, all while learning the nitty-gritty details of today's most powerful algorithms.

Offers in-depth review of critical test concepts, with strategies and techniques to help maximize performance, and includes five practice tests with answer explanations.

Prepare for exams and succeed in your mathematics course with this comprehensive solutions manual! Math for Deep Learning provides the essential math you need to understand deep learning discussions, explore more complex implementations, and better use the deep learning toolkits. With Math for Deep Learning, you'll learn the essential mathematics used by and as a background for deep learning. You'll work through Python examples to learn key deep learning related topics in probability, statistics, linear algebra, differential calculus, and matrix calculus as well as how to implement data flow in a neural network, backpropagation, and gradient descent. You'll also use Python to work through the mathematics that underlies those algorithms and even build a fully-functional neural network. In addition you'll find coverage of gradient descent including variations commonly used by the deep learning community: SGD, Adam, RMSprop, and Adagrad/Adadelata.

A Supplement for Food Science & Engineering Students Who Need to Improve Their Mathematical Skills A remedial textbook for understanding mathematical theories and formulas, Math Concepts for Food Engineering, Second Edition helps students improve their mathematical skills so that they can succeed in food engineering courses. The text illustrates the importance of mathematical concepts and relates them to the study of food engineering. New to the Second Edition · Straightforward explanations of basic balance and transport principles used in food engineering · Various exercises throughout that use spreadsheets, which are available on the publisher's website · A chapter on mass transfer · A mathematical skills screening quiz · A simple units-conversion page This new edition is student tested What students have to say "... a must-have for any student in food science engineering ... teaches students how to think like an engineer. Each chapter provides meaningful applications ... shows students both the approach and the mathematical solution needed to solve example problems." "This workbook not only taught me which mathematical equations are needed to solve various food engineering problems, it helped me understand the analysis and approach needed when solving any engineering problem. The practice questions helped me gain confidence in my problem-solving skills, and they make the coursework more interesting by relating it to real-world problems." Builds Mathematical Confidence This text helps assess the mathematical reasoning skills of food science and engineering students and offers assistance for those who need a refresher. It supplies the necessary material to solve simple engineering problems so that students are prepared to face more rigorous challenges in class.

CliffsNotes TExES Math 4-8 (115) and Math 7-12 (235) is the perfect way to study for Texas' middle school and high school math teacher certification tests. Becoming a certified middle school math teacher and high school math teacher in Texas means first passing the TExES Math 4-8 (115) teacher certification test for middle school teachers or the TExES Math 7-12 (235) teacher certification test for high school teachers.
