In this dynamic look at the current state of character education, Alan Lockwood assesses its strengths and weaknesses and finds fault with leading advocates for failing to respond to sound critiques of their work. Lockwood argues that contemporary character education can be significantly improved by using key principles from established theories and research on developmental psychology. He offers numerous examples to support his recommendations while inviting character education theorists and practitioners to generate their own implications from his presentation. This book is a valuable resource for anyone interested in improving the quality of values-based education for children and adolescents.

Making Reform Work is a practical narrative of ideas that begins by describing who is saying what about American higher education—who's angry, who's disappointed, and why. Most of the pleas for changing American colleges and universities that originate outside the academy are lamentations on a small number of too often repeated themes. The critique from within the academy focuses on issues principally involving money and the power of the market to change colleges and universities. Sandwiched between these perspectives is a public that still has faith in an enterprise that it really doesn't understand. Robert Zemsky, one of a select group of scholars who participated in Secretary of Education Margaret Spellings's 2005 Commission on the Future of Higher

Education, signed off on the commission's report with reluctance. In *Making Reform Work* he presents the ideas he believes should have come from that group to forge a practical agenda for change. Zemsky argues that improving higher education will require enlisting faculty leadership, on the one hand, and, on the other, a strategy for changing the higher education system writ large. Directing his attention from what can't be done to what can be done, Zemsky provides numerous suggestions. These include a renewed effort to help students' performance in high schools and a stronger focus on the science of active learning, not just teaching methods. He concludes by suggesting a series of dislodging events—for example, making a three-year baccalaureate the standard undergraduate degree, congressional rethinking of student aid in the wake of the loan scandal, and a change in the rules governing endowments—that could break the gridlock that today holds higher education reform captive. *Making Reform Work* offers three rules for successful college and university transformation: don't vilify, don't play games, and come to the table with a well-thought-out strategy rather than a sharply worded lamentation.

By separating government financing of education from government administration of schools, Friedman argued, “parents at all income levels would have the freedom to choose the schools their children attend.” *Liberty & Learning* is a collection of essays from the nation’s top education experts evaluating the progress of Friedman’s innovative idea and reflecting on its merits in the 21st century. The book also contains a special prologue and epilogue by Milton Friedman himself. The contributors to this volume take a variety of approaches to Friedman’s voucher idea. All of them assess the merit of Friedman’s plan through an energetic, contemporary perspective, though some authors take a theoretical position, while others employ a very pragmatic approach.

The introduction of market forces into higher education is the most crucial issue facing universities and colleges today. As the role of universities in the knowledge society becomes ever more apparent, and as public funding reaches its limit, marketisation has become an issue of critical importance. Discussions about the ever-increasing cost of tuition, affordability, access, university rankings, information, and the commercialization of academic research take place not just in North America, Western Europe and Australasia, but also in Eastern Europe, Asia and Latin America. Higher Education and the Market provides a comprehensive account of this phenomenon, and looks at its likely impact on key dimensions of university activity: system structure funding and resources the curriculum participation and achievement research and scholarship interactions with third parties. Contributors propose how market forces, government intervention and academic self-regulation can be combined to harness the benefits of increased competition and efficiency without losing the public good. It is of particular interest to government and institutional leaders, policy makers, researchers and students studying higher education.

American higher education is increasingly in trouble. Costs are too high, learning is too little, and underemployment abounds post-graduation. Universities are facing an uncertain and unsettling future with free speech suppression, out-of-control Federal student aid programs, soaring administrative costs, and intercollegiate athletics mired in corruption. Restoring the Promise explores these issues and exposes the federal government's role in contributing to them. With up-to-date discussions of the most recent developments on university campuses, this book is the most comprehensive assessment of universities in recent years, and one that decidedly rejects conventional wisdom. Restoring the Promise is an absolute must-read for those concerned with the future of higher education in America.
