Conspiracy theories are not new to our modern time. They date back to biblical times when Moses sent his spies out to check out what the Egyptians were doing. Espionage is also linked to various conspiracies and is all mixed up in the same bag of tricks and form any decent conspiracy or theory. In this new, fact providing book by author Peter Kross called *The American Conspiracy Files: The Stories We Were Never Told*, the reader is given a tour de force through the world of conspiracies and conspiracy theories dating back to the time when this nation was first founded, right up until the modern day. Author Kross provides the reader with these fascinating and unbelievable stories in short, thought-provoking chapters that will both inform and educate the public to these little known tales from our past. Among the stories that are revealed are the circumstances surrounding the Lost Colony of Roanoke whose settlers simply left their homes and were never seen again. The tales of the deaths of Davy Crockett, Jesse James and Butch Cassidy and the Sundance Kid leave the reader wondering just what really happened to these iconic heroes, conspiracies in the Revolutionary War including Benedict Arnold and Ben Franklin's son, William. We delve into the large conspiracy to kill President Lincoln and see that John Wilkes Booth did not act

alone. Our tale then goes into our modern day with chapters on the deaths of John F. Kennedy, Robert Kennedy, Martin Luther King, spies in the Roosevelt administration, the reasons behind the Oklahoma City bombing, the sordid plots of President Lyndon Johnson and the deaths of people associated with him, the revelation of “Deep Throat,” a plot by the Joint Chiefs of Staff to invade Cuba and blame it on Castro, among other interesting tales. As author Kross did in his previous books, *Tales From Langley: The CIA from Truman to Obama* and *The Secret History of the United States*, these stories are a fascinating account of our hidden history, most of which the public has never heard of.

Two Blankets, kidnapped as a girl and required to live as a slave by the Chinook, must cast her own future as a whiteman's wife when her adopted tribe is forced to move to the reservation. Kidnapped at age ten from her native tribe of Nez Perce by the Chinook and forced to live as a mistshimus, a slave in their stratified society, Girl-With-No-Name has earned a place of some respect and even a name among her new tribe. Now, Two Blankets must face a new trial when her adopted tribe is forced move to Warm Springs Reservation. Left behind with Marshall, the whiteman husband she was sold to, only her resourcefulness and ingenuity can save her. With her spirit guides Gray Wolf and White Mouse, she pursues the only path left to her—a voyage alone, up the mighty Columbia River, to beg the Tyee of the Chinook for a favor. She knows she cannot join the Chinook there, as the Tyee, Running Blade, has promised to kill her. For she is a mistshimus—a slave—and her forbidden love of the Tyee's son, Standing Bear, should disrupt the tribe. Even so, she must convince the Tyee to invoke the precedent of the Widow's Sister, and allow her a child by Standing Bear. Only then can she return to Marshall and continue to live in his society with her child and a hope for the future.

Previous research on gray wolves (*Canis lupus*) in protected landscapes demonstrates these large carnivores can have consumptive and non-consumptive effects on prey species which lead to top-down trophic cascades. However, much remains to be known about impacts of gray wolves on prey in managed landscapes as well as how these predators

influence interactions between prey species. Recent natural re-colonization of gray wolves to managed landscapes of Washington state facilitated a natural experiment wherein we explored impacts of gray wolves on multiple sympatric prey species – mule deer (*Odocoileus hemionus*) and white-tailed deer (*O. virginianus*). We compared survival, habitat use, and resource partitioning of adult mule deer and adult white-tailed deer in wolf present and wolf absent areas. Mule deer and white-tailed deer survival rates were not negatively impacted by presence of gray wolves. Season was the primary factor in explaining all predator and human-caused mortality. Our data suggests gray wolves may not have consumptive effects on native prey populations in Washington state. Next, mule deer and white-tailed deer experiencing gray wolf predation risk did exhibit shifts in habitat use relative to conspecifics in areas without gray wolves. Shifts in habitat use by mule deer and white-tailed occurred at coarse and fine-spatial scales, respectively, and were explained by divergent escape tactics of each prey species and the landscape features that promote escape of each deer species when facing gray wolf predation risk. It appears gray wolves can influence habitat use of multiple prey species and potentially at differing spatial scales depending on escape behavior of prey species and the landscape features that promote escape of prey from predation. Our results suggest gray wolves could initiate multiple top-down trophic cascades via prey species specific shifts in habitat use in response to gray wolf predation risk. Lastly, there was increased resource partitioning between mule deer and white-tailed deer in areas with gray wolves compared to resource partitioning between mule deer and white-tailed deer in areas without gray wolves. Increased resource partitioning between mule deer and white-tailed deer was again explained by divergent escape tactics of each prey species and the landscape features promoting escape of

each deer species subject to wolf predation risk. However, direction and magnitude of resource partitioning between mule deer and white-tailed in areas with gray wolves compared to areas without gray wolves varied with season and scale. Our findings demonstrate that gray wolf predation risk can mediate interactions between co-occurring prey species but is context-dependent. We suggest further research on consumptive and non-consumptive effects of gray wolves on multiple prey species to better understand the potential for top-down trophic cascades in managed landscapes.

In 2009, three US professors with access to Adolf Hitler's alleged remains startled the world with scientific DNA proof that the skull and bones that Russia had claimed since the end of World War II were Hitler's actually belonged to a middle-aged woman whose identity remains unknown. This announcement has rekindled interest in the claim made by Joseph Stalin, maintained to the end of his life, that Hitler got away. The truth is that no one saw Hitler and Eva Braun die in the bunker in Berlin on April 30, 1945. No photographs were taken to document claims Hitler and Evan Braun committed suicide. Hitler's body was never recovered. No definitive physical evidence exists proving Hitler died in the bunker in Berlin. Dr. Jerome Corsi explores the historical possibility that Hitler escaped Nazi Germany at the end of World War II. FBI and CIA records maintained at the National Archives indicate that the US government took seriously reports at the end of World War II that Hitler had escaped to Argentina. More recent evidence suggests Hitler may have fled to Indonesia, where he married and worked at a hospital in Sumbawa. Even the chief of the US trial counsel at Nuremburg, Thomas J. Dodd, was quoted as saying, "No one for sure can say Adolf Hitler is dead." Putting massive amounts of evidence and research under a critical eye, Dr.

Corsi shows that perhaps modern history's most tantalizing question has yet to be definitively answered: Did Hitler escaped Nazi Germany at the end of World War II to plot revenge and to plan the rise of the Fourth Reich? Skyhorse Publishing, as well as our Arcade imprint, are proud to publish a broad range of books for readers interested in history--books about World War II, the Third Reich, Hitler and his henchmen, the JFK assassination, conspiracies, the American Civil War, the American Revolution, gladiators, Vikings, ancient Rome, medieval times, the old West, and much more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home.

This volume provides a series of illuminating perspectives on the timings of death, through in-depth studies of Shakespearean tragedy, criminal execution, embalming practices, fears of premature burial, rumours of Adolf Hitler's survival, and the legal concept of brain death. In doing so, it explores a number of questions, including: how do we know if someone is dead or not? What do people experience at the moment when they

die? Is death simply a biological event that comes about in temporal stages of decomposition, or is it a social event defined through cultures, practices, and commemorations? In other words, when exactly is death? Taken together, these contributions explore how death emerges in a series of stages that are uncertain, paradoxical, and socially contested. MUSTAPHA KEMAL ATATURK, the great Turkish dictator, is a figure of great significance to the modern world. He did in Turkey what, in effect, Nasser and the other present-day “strong men” are trying to do in their countries, and he is their model and ideal. In fact, Nasser said of this book specifically “This has been the most important book in my life.” Besides being of great historical importance, this book, first published in 1933, is also a fascinating study of an extremely complex and controversial figure, in which an iron self-discipline and a sudden capacity for self-abandonment existed side by side and indeed reinforced each other. Richly illustrated with maps and drawings. “This has been the most important book in my life”—Gamal Abdel Nasser

In this book, we document and evaluate the recovery of gray wolves (*Canis lupus*) in the Great Lakes region of the United States. The Great Lakes region is unique in that it was the only portion of the lower 48 states where wolves were never completely extirpated. This region also contains the area where many of the first modern concepts of wolf

conservation and research were developed. Early proponents of wolf conservation such as Aldo Leopold, Sigurd Olson, and Durward Allen lived and worked in the region. The longest ongoing research on wolf-prey relations (see Vucetich and Peterson, Chap. 3) and the first use of radio telemetry for studying wolves (see Mech, Chap. 2) occurred in the Great Lakes region. The Great Lakes region is the first place in the United States where “Endangered” wolf populations recovered. All three states (Minnesota, Wisconsin, and Michigan) developed ecologically and socially sound wolf conservation plans, and the federal government delisted the population of wolves in these states from the United States list of endangered and threatened species on March 12, 2007 (see Refsnider, Chap. 21). Wolf management reverted to the individual states at that time. Although this delisting has since been challenged, we believe that biological recovery of wolves has occurred and anticipate the delisting will be restored. This will be the first case of wolf conservation reverting from the federal government to the state conservation agencies in the United States.
