This book is concerned with writing systems in a multi-cultural context. The field of English as a second language is well researched and documented, but the equally important subject of how to acquire the Latin alphabet as a second writing system, or how to alter from any particular writing system to another, has seldom been considered. An analytical approach to this subject is provided, starting with a system for comparing the rules of writing systems and leading to practical help for teachers and students. Examples of many of the world's writing systems are used to pinpoint areas of possible difficulty, and the subject is expanded to cross-cultural typography and computers. This is a book for language teachers and students around the world, from the primary school to the university level. Also important to anyone interested in handwriting, or cross-cultural issues in the widest sense.

Handwriting expert Michelle Dresbold—the only civilian to be invited to the United States Secret Service's Advanced Document Examination training program—draws on her extensive experience helping law enforcement agencies around the country on cases involving kidnapping, arson, forgery, murder, embezzlement, and stalking to take us inside the mysterious world of crossed t's and dotted i's. In Sex, Lies, and Handwriting, Dresbold explains how a single sentence can provide insight into a person's background, psychology, and behavior. Throughout the book, Dresbold explores the handwriting of sly politicians, convicted criminals, notorious killers, suspected cheats, and ordinary people who've written to Dresbold's "The Handwriting Doctor" column for help. She shows you how to identify the signs of a dirty rotten scoundrel and a lying, cheating, backstabbing lover. And she introduces you to some of the most dangerous traits in handwriting, including weapon-shaped letters, "shark's teeth," "club strokes," and "felon's claws." Dresbold also explains how criminals are tracked through handwritten clues and what spouses, friends, or employees might be hiding in their script. Sex, Lies, and Handwriting will have you paying a bit more attention to your—and everyone else's—penmanship.

The material in this volume is based on articles and a series of talks presented to members of the American Handwriting Analysis Foundation by the late Israeli psychologist/graphologist, Dr. Ze'ev Bar-Av. I had co-presented papers with him at several handwriting analysis conferences, and when he asked me to help him with the lecture series, I accepted with pleasure. I provided most of the demonstrative handwriting samples and edited the material. After Dr. Bar-Av's untimely death, I compiled and further edited this important material to preserve and make it available for handwriting professionals.

The utilization of individual items of information in judgment is deliberated in Chapter 3, while the subjective patterns of judgment are described in Chapter 4. Handwriting Analysis: Laws/Principles... And More is Mr. Cammarata's presentation of handwriting's inherent scientific base from which handwriting is analyzed. Like any other scientific study, handwriting is based upon inescapable laws/elements/principles which are exhibited each time a person writes. These form the stable rock of its foundation. Part of that rock is the only two possible movements when writing. These movements are stated with instant proof. No different than any other science, handwriting's silent but dynamic portrayal of personality is a wonderment of human analytical and historical development. Handwriting is actually brain writing. By assessing the permanent inescapable elements, a personality can be traced just like the infamous duck tracks. Besides describing the elements/principles/laws, original concepts of handwriting will be presented. A 20-year study to determine the very necessary average standard size for writing is given with statistics and insight into the power of handwriting. A presentation is made implying handwriting's reality source base. Further, the generally accepted copybook "standard" writing size is challenged with various arguments. The process of personnel selection (before hiring) is also presented and much to the employer's advantage. It's the personality that DOES the job, not experience nor education. Yes, the latter help but they do not DO the job. Only the inherent qualities matched to the job description can produce a known performance level prior to hiring. This book is an inspiration to the understanding of handwriting's foundation scientific base and why handwriting analysis is real and works. Forget about what you may have learned or heard of previously. This book gives you the truth about handwriting. You'll be surprised and totally engaged in this most fascinating true presentation. Does your handwriting actually change? The answer is in this book. Is handwriting analysis good for evaluating a mate? Absolutely... before the ring. Those and much more in this most forthright scientifically based presentation. Welcome.

This proceedings book presents state-of-the-art research innovations in computational vision and bio-inspired techniques. Due to the rapid advances in the emerging information, communication and computing technologies, the Internet of Things, cloud and edge computing, and artificial intelligence play a significant role in the computational vision context. In recent years, computational vision has contributed to enhancing the methods of controlling the operations in biological systems, like ant colony optimization, neural networks, and immune systems. Moreover, the ability of computational vision to process a large number of data streams by implementing new computing paradigms has been demonstrated in numerous studies incorporating computational techniques in the emerging bio-inspired models. The book reveals the theoretical and practical aspects of bio-inspired computing techniques, like machine learning, sensor-based models, evolutionary optimization, and big data modeling and management, that make use of effectual computing processes in the bio-inspired systems. As such it contributes to the novel research that focuses on developing bio-inspired computing solutions for various domains, such as human-computer interaction, image processing, sensor-based single processing, recommender systems, and facial recognition, which play an indispensable part in smart agriculture, smart city, biomedical and business intelligence applications.
