The cat lady. The couple who won't let anyone in their apartment. The old man with all that junk in his yard. Their severe hoarding puts them, and often others, at risk for injury, disease, and even death. Most deny needing help, and for this reason, professionals are desperate to find more effective ways to offer and provide assistance to them. In response to this growing public health problem, Clinician's Guide to Severe Hoarding refines our understanding and presents in depth and innovative alternative to traditional interventions. Arguing that although treatment for hoarding can be effective for those who are open to help, people with severe hoarding are not. The Clinician's Guide to Severe Hoarding describes an alternative strategy to help those who adamantly refuse help and yet face significant health and safety risks due to the hoarding problem – harm reduction. This client-centered approach takes readers through harm reduction plan development, team building, goal setting, client collaboration, and progress assessment. The Clinician's Guide also explains that a successful harm reduction plan may encourage clients to seek further help, and offers insights into working with special populations such as people who hoard animals and children who exhibit hoarding behavior. The Clinician's Guide describes in detail a range of strategies for assisting people with severe hoarding: Strategies for engaging with clients who hoard. Guidelines for assessing harm potential. Guidelines for creating a harm reduction plan, building a harm reduction team, and conducting and evaluating home visits. Skills for client self-help: decision making, time management, and more. Guidelines for navigating the ethical and legal issues that arise in assisting people who hoard. Readings, links, and other resources. With its practical common-sense approach to a complex problem, Clinician's Guide to Severe Hoarding is a unique volume not only for mental health practitioners, but also other professionals who assist people who hoard, such as home health aides, social workers, and professional organizers.

The Council on Tall Buildings and Urban Habitat has produced four Technical Guides to date, since the series launched in late 2012. Each of these guides is the product of a CTBUH Working Group—committees formed specifically to address focused topical subjects in the industry. The intention of each guide is the same—to provide working knowledge to the typical building owner or professional who wants a better understanding of available options for improving tall buildings, and what affects their design. The object of the series is to provide a tool-kit for the creation of better-performing tall buildings, and to spread the understanding of the considerations that need to be made in designing tall. This technical guide offers an extensive overview of the use of vertical vegetation in high-rise buildings, an indepth analysis of green walls, definitions and typology, including standards, policies and incentives. It features comprehensive case studies, along with architectural theories of the public and private benefits of green walls. The book delves into architect-design considerations and limitations, the effects of green walls on energy efficiencies and includes recommendations and future research.

For generations, it has been an axiom that the purchase of a home is the greatest single investment the average person makes. The corollary has always been that if you take good care of that home it will inevitably be a good investment, permitting you to sell your home at a profit or allowing you to take out a large loan on the equity you've built up. While the axiom is still true, the corollary is no longer true. Many Americans have lost their homes due to the Great Recession and still more owe more on their homes than the homes are worth. People once made a lot of money on flipping homes; now many wonder if they should buy homes at all. There are unmistakable signs that we are headed into an even worse recession, making any housing decisions more important than ever. An acknowledged expert, Dr. Carol Roskey has spent a lifetime in studying all aspects of the housing field from financing to the best kinds of insulation. With her help, you can make well informed decisions.

Living and working abroad. Sounds glamorous—and maybe it is, if you're posted to Hong Kong or Sydney. But what if your company sends you to Bangkok, Warsaw, or Manila? Many questions arise: Is it safe to go out at night? Do quality schools exist? How polluted is the air? Is public transportation handy? What's the average monthly rent for a decent house? What inoculations should you get before you go? Can you find your favorite brand of toothpaste? The Global Manager's Guide to Living and Working Abroad: Eastern Europe and Asia answers these and many other questions expats will have about the cities that companies send employees to most often in Eastern Europe and Asia, as well as Australia, New Zealand, and South Africa. Though the heart of the book is the city-by-city listing, it also includes tips on preparing for the move, dealing with culture shock, staying connected to the home front, understanding the psychological aspects of living abroad, country-specific business and social etiquette, and other topics of concern to workers sent abroad. The guide also includes information for corporate HR people: When a cost of living differential is appropriate and how to calculate it, how to obtain necessary work permits and visas, how to help employees stay as safe and secure as possible, and how to arrange for healthcare and insurance. Best of all, the information is up to date and comes right from the fresh research of Mercer—the consultancy many other companies turn to for advice and the latest facts regarding working and living conditions in all corners of the globe.
