This book looks at a number of topics in economic education, presenting multiple perspectives from those in the field to anyone interested in teaching economics. Using anecdotes, classroom experiments and surveys, the contributing authors show that, with some different or new techniques, teaching economics can be more engaging for students and help them better retain what they learned. Chapters cover a wide range of approaches to teaching economics, from interactive approaches such as utilizing video games and Econ Beats, to more rigorous examinations of government policies, market outcomes and exploring case studies from specific courses. Many of the chapters incorporate game theory and provide worked out examples of games designed to help students with intuitive retention of the material, and these games can be replicated in any economics classroom. While the exercises are geared towards college-level economics students, instructors can draw inspiration for course lectures from the various approaches taken here and utilize them at any level of teaching. This book will be very useful to instructors in economics interested in bringing innovative teaching methods into the classroom.

This dissertation examines several facets of the current educational landscape in the United States and the impacts these characteristics have on individual outcomes. The first chapter examines high stakes exit exams, which are pervasive in the American education system and have the ability to impact students far beyond their earned scores. This chapter considers how exit exams in Texas impact student behavior and human capital formation before the end of high school. Employing a regression discontinuity framework, I examine the impact of failing the exam the first time it is administered for students within a small window of scores around the passing threshold. Considering behavioral responses to the administration of the Texas

Assessment of Knowledge and Skills (TAKS), I study the impact on students' courses taken, attendance, and a set of disciplinary actions after the exam in the final year of high school. I find that, in line with a model of motivation with heterogeneous effects, students who fail do respond through an increase in the number of courses taken in their senior year, and find a smaller increase in disciplinary infractions. I then consider heterogeneity among student subgroups to discern whether the TAKS exam has differential impacts across different portions of the high school population in Texas. The second chapter quantifies the extent to which test scores and demographic variables account for the differing high school graduation rates between minority and white students in Texas. There are persistent, well documented gaps in both achievement on standardized tests and high school diploma receipt between minority students and their white peers. I employ a set of linear probability models to estimate the graduation gap for students who were eighth graders in Texas from 2003-2009 and examine specific sub-populations to try to disentangle some of the factors that could be contributing to these gaps. I find that student observable characteristics, especially test scores, can account for a substantial portion of this gap, which supports estimates in the previous literature. The third chapter of my dissertation examines how merit-based scholarships,

instead of need-based financial aid, impact the decisions students make when enrolling in post-secondary education. Using the 2000 US Census data and American Community Survey data from 2001-2010, I evaluate the effect of merit scholarships in Tennessee on current college enrollment using difference-in-difference estimation. In contrast to the estimated effects of merit scholarships in Georgia, the Tennessee Education Lottery Scholarship does not seem to impact student behavior; estimates are mildly negative but not statistically different from zero considering the whole population of youth ages 16-26, traditional college enrollees ages 18-19, or older students aged 20-22. I argue these estimates are in line with many more recent findings examining merit scholarship programs. Finally, I employ a synthetic control method to compare these estimates with more traditional estimation strategies.

Why we need to stop wasting public funds on education  
Despite being immensely popular—and immensely lucrative—education is grossly overrated. Now with a new afterword by Bryan Caplan, this explosive book argues that the primary function of education is not to enhance students' skills but to signal the qualities of a good employee. Learn why students hunt for easy As only to forget most of what they learn after the final exam, why decades of growing access to education have not resulted in better jobs for average workers, how employers reward workers for costly schooling they rarely ever use, and why cutting education

For decades US politicians have been kicking the federal deficit and overspending can down the road. No politician can get elected by running on a platform that will honestly fix the US economy. At no time in history has it been more crucial than now for each of us to understand our government. In order to do so, we must understand economics, politics, and the difference between the two. We are the richest country in history but yet we sit on the edge of financial disaster. How can we expect that to change if voters don't understand the very basics of economics? There has never been a source of information on economics that people can easily understand, UNTIL NOW. Author Marshall Payn, with a degree in Economics from M.I.T., believes that the current presentation of economics in our educational system is the biggest obstacle in understanding economics. He developed his unique approach while working in the field of vocational education, i.e. getting fundamental information from

one mind to another. In clear and simple terms, this book separates truth from emotion, economics from politics, and offers undeniable proof of our country's destiny if each of us continues to elect politicians while lacking a clear understanding of basic economic principles. If you think you understand economics, think again. This book is an eye opener, not only with its content, but because these concepts are so simple. What is truly amazing is that the knowledge in this book is not common knowledge. You cannot call yourself a responsible citizen unless you read *How to Understand Economics in 1 Hour* prior to voting in the 2012 US election. It will change the way you see the government, politicians, and the future of our country.

strategies for answering the multiple-choice questions, so students can build their point scores and get a 5! This book was written to be an alternative to high school economic textbooks (particularly for homeschoolers). Warning, it is clearly written by a fiscal conservative! This student book includes an optional mid-term exam and final. (The answers and two optional classroom activities are available in the Teachers' Key.) Economics is the study of the choices we make with scarce resources. My favorite economics book is Basic Economics by Thomas Sowell. In his book, Sowell asks the very important question, "Do we live in an 'Era of Scarcity' or an 'Era of Abundance'?" While here in the United States we live in an area that has more abundance than most of the rest of the world, and an era that has more abundance than any before us, we still live with "scarcities." There is not enough of anything to please everyone. Choices must always be made as to how to use the resources available. If we all live with scarcity, then does that equal shortage? No, shortages are caused when the free market is tampered with, generally by the government. This economics textbook will help you and your students gain a better understanding of this and other "Austrian" ideas!
