Maxwell encounters have a dream. In fact, he's asked thousands about their greatest aspirations. Some describe their dream with great enthusiasm and detail. Others are reluctant, almost embarrassed, to talk about it. Regardless of their zeal or fear, the same question drives every person with a dream: Can I achieve it? Sadly, most people have no idea how viable their dream is. They hope to achieve it, yet hope is not a strategy. What people need is a way to test their dream. In *Put Your Dream to the Test*, Maxwell brings the subject of a personal dream down to earth. He gives readers practical and powerful direction for their lives by leading them through ten questions that will help them create a clear and compelling pathway to their dream. Habitat loss and degradation that comes as a result of human activity is the single biggest threat to biodiversity in the world today. *Habitat Fragmentation and Landscape Change* is a groundbreaking work that brings together a wealth of information from a wide range of sources to define the ecological problems caused by landscape change and to highlight the relationships among landscape change, habitat fragmentation, and biodiversity conservation. The book: synthesizes a large body of information from the scientific literature considers key theoretical principles for examining and predicting effects examines the range of effects that can arise explores ways of mitigating impacts reviews approaches to studying the problem discusses knowledge gaps and future areas for research and management *Habitat Fragmentation and Landscape Change* offers a unique mix of theoretical and practical information, outlining general principles and approaches and illustrating those principles with case studies from around the world. It represents a definitive overview and synthesis on the full range of topics that fall under the widely used but often vaguely defined term "habitat fragmentation."

How cognitive psychology explains human creativity Conventional wisdom holds that creativity is a mysterious quality present in a select few individuals. The rest of us, the common view goes, can only stand in awe of great creative achievements: we could

never paint Guernica or devise the structure of the DNA molecule because we lack access to the rarified thoughts and inspirations that bless geniuses like Picasso or Watson and Crick. Presented with this view, today's cognitive psychologists largely differ finding instead that "ordinary" people employ the same creative thought processes as the greats. Though used and developed differently by different people, creativity can and should be studied as a positive psychological feature shared by all humans. Creativity: Understanding Innovation in Problem Solving, Science, Invention, and the Arts presents the major psychological theories of creativity and illustrates important concepts with vibrant and detailed case studies that exemplify how to study creative acts with scientific rigor. Creativity includes:

- * Two in-depth case studies--Watson and Crick's modeling of the DNA structure and Picasso's painting of Guernica-- serve as examples throughout the text
- * Methods used by psychologists to study the multiple facets of creativity
- * The "ordinary thinking" or cognitive view of creativity and its challengers
- * How problem-solving and experience relate to creative thinking
- * Genius and madness and the relationship between creativity and psychopathology
- * The possible role of the unconscious in creativity
- * Psychometrics--testing for creativity and how personality factors affect creativity
- * Confluence theories that use cognitive, personality, environmental, and other components to describe creativity

Science, Invention, and the Arts takes both students and lay readers on an in-depth journey through contemporary cognitive psychology, showing how the discipline understands one of the most fundamental and fascinating human abilities. "This book will be a hit. It fills a large gap in the literature. It is a well-written, scholarly, balanced, and engaging book that will be enjoyed by students and faculty alike." --David Goldstein, University of Toronto

I do not think of myself as primarily interested in method, but in the substance of psychology. Nevertheless, our discipline has such difficulties in coming to grips with its substance that I have found myself getting involved in fww to do it persistently and since the beginning of my career. That career has been divided between diagnosis and research, the balance between them swinging gradually from the former to the latter. To the astonishment of many of my students and colleagues, I have never become a psychotherapist nor a psychoanalyst, though I have looked closely over the shoulders of many friends at their work, have attended continuous case seminars, and have participated in research on psychotherapy and psychoanalysis enough to feel that I have a pretty good grasp of what that kind of endeavor is like. So I have been writing about method, diagnostic and investigative, for over 25 years, and was happy to accept the suggestion of Seymour Weingar ten, of Plenum Press, that I publish a collection of these papers. What has ended up as two volumes was originally conceived as one, for I feel that there is more similarity of method in assessment, prediction, and research than

appears on the surface. The General Introduction and Chapter 1 of Volume 1 state the point of view of the entire work.

Two Oracle scientists focus on optimizing Oracle performance rather than ineffectually "tuning" it, elaborating on methods that work to identify performance bottlenecks and predict and quantify the performance improvements expected from upgrades.

Understanding Da Vinci's Creative Genius The life and art of history's most influential mind Bestselling author Leonard Shlain explores the potential for humankind through the life, art, and mind of the first true Renaissance Man, Leonardo da Vinci. His innovations as an artist, scientist, and inventor are recast through a modern lens, with Shlain applying contemporary neuroscience to illuminate da Vinci's creative process. No other person in human history has excelled in so many areas of innovation: Shlain reveals the how and the why. Shlain theorizes that Leonardo's extraordinary mind came from a uniquely developed and integrated right and left brain, which offers a model for how we too can evolve. Using past and current research, Leonardo's Brain presents da Vinci as the focal point for a fresh exploration of human creativity. With his lucid style and remarkable ability to discern connections among a wide range of fields, Shlain brings the reader into the world of history's greatest mind. Leonard Shlain is a bestselling author, inventor, and surgeon. Admired among artists, scientists,

philosophers, anthropologists, and educators, he authored three bestselling books. He delivered stunning visual presentations based upon his books in venues around the world, including Harvard, the New York Museum of Modern Art, CERN, Los Alamos, the Florence Academy of Art, and the European Council of Ministers. Shlain died in May 2009 at the age of 71 from brain cancer shortly after the completion of this book. Visit LeonardShlain.com and LeonardosBrain.com.
