Richly expansive and deeply moving, an intimate novel of secret lives and painful histories from one of the finest storytellers we have 'This brilliant novel examines lives lived, losses accumulated, and the slipperiness of perception. Yiyun Li writes deeply, drolly, and with elegance about history, even as it's happening. She is one of my favorite writers, and *Must I Go* is an extraordinary book.' Meg Wolitzer *Lilia Liska* is 81. She has shrewdly outlived three husbands, raised five children and seen the arrival of seventeen grandchildren. Now she has turned her keen attention to a strange little book published by a vanity press: the diary of a long-forgotten man named Roland Bouley, with whom she once had a fleeting affair. Increasingly obsessed by this fragment of intimate history, *Lilia* begins to annotate the diary with her own rather different version of events. Gradually she

undercuts Roland's charming but arrogant voice with an incisive and deeply moving commentary. She reveals to us the surprising, long-held secrets of her past. And she returns inexorably to her daughter, Lucy, who took her own life at the age of 27. *Must I Go* is an unconventional epistolary novel, a gleefully one-way correspondence between the very-much-alive Lilia and the long-departed Roland. Though mortality is ever-present, this is ultimately a novel about life, in all its messy glory. Life lived, for the extraordinary Lilia, absolutely on its own terms. With exquisite subtlety and insight, Yiyun Li navigates the twin poles of grief and resilience, loss and rebirth, that compass a human heart.

"Trading at the Speed of Light tells the story of how many of our most important financial markets have transformed from physical trading floors on which human beings trade face-to-face, into electronic systems within which computer algorithms trade with each other. Tracing the emergence of ultrafast, automated, high-frequency trading (HFT) since the early 2000s, Donald MacKenzie draws particular attention to the importance of what he deems the 'material political economy' of twenty-first century finance. Fast transmission of price data used to involve fibre-optic cables, but the strands in such cables are made of materials (usually a specialised form of glass) which slow light down to around two-thirds of its speed in free space. By contrast, microwave and other wireless signals used in HFT travel through the atmosphere at nearly full light speed. At these nanosecond speeds, the physical nature of information transmission and the precise spatial location of the equipment involved become hugely important, thus creating inevitable pinch points in the system. MacKenzie details the ways in which these pinch points - individual frequency bands, specific locations on the roofs of computer data centres, and particular sites for microwave towers - are especially advantageous, making it possible for those who control them to profit from that control. The book draws from over 300 interviews conducted with high-

frequency traders around the world, the people who supply them with technological systems and communication links, exchange staff and regulators, as well as with others who function within markets that have not yet become dominated by HFT. MacKenzie focuses most closely upon the four main sites of international HFT - Chicago, New York, Amsterdam, and London - and examines both the technology and the politics underpinning modern financial markets"-- This delightful pack contains a 100-piece jigsaw of a lively forest scene for children to assemble, as well as a 24-page picture puzzle book teeming with animals that can be found in forests.
