One of the nation's chief architecture critics reveals how the environments we build profoundly shape our feelings, memories, and well-being, and argues that we must harness this knowledge to construct a world better suited to human experience. Taking us on a fascinating journey through some of the world's best and worst landscapes, buildings, and cityscapes, Sarah Williams Goldhagen draws from recent research in cognitive neuroscience and psychology to demonstrate how people's experiences of the places they build are central to their well-being, their physical health, their communal and social lives, and even their very sense of themselves. From this foundation, Goldhagen presents a powerful case that societies must use this knowledge to rethink what and how they build: the world needs better-designed, healthier environments that address the complex range of human individual and social needs. By 2050 America's population is projected to increase by nearly seventy million people. This will necessitate a vast amount of new construction—almost all in urban areas—that will dramatically transform our existing landscapes, infrastructure, and urban areas. Going forward, we must do everything we can to prevent the construction of exhausting, overstimulating environments and enervating, understimulating ones. Buildings, landscapes, and cities must both contain and spark associations of natural light, greenery, and other ways of being in landscapes that humans have evolved to need and expect. Fancy exteriors and dramatic forms are never enough, and may not even be necessary; authentic textures and surfaces, and careful, well-executed construction details are just as important. Erudite, wise, lucidly written, and beautifully illustrated with more than one hundred color photographs, *Welcome to Your World* is a vital, eye-opening guide to the spaces we inhabit, physically and mentally, and a clarion call to design for human experience.

Human-Built WorldHow to Think about Technology and CultureUniversity of Chicago Press

The origin of world civilization can be traced to the Indus Valley cradle, where brilliant and original thinkers made groundbreaking discoveries. The history of these discoveries is recorded in the vast Sanskrit literature. In this study, author M. K. Agarwal explores the cultural and historical significance of the region. He explores Indus Valley culture, which encouraged creative thought—as opposed to the Abrahamic faiths, which herded followers into dogmatic thinking. He holds that these religions prospered because of their unfettered hatred of the Vedic-Hindu-Buddhist peoples, who were demonized as pagans to be murdered, tortured, raped, enslaved, and robbed. He also considers the achievements of that culture, such as the creation of the most affluent, most scientifically advanced, and most spiritual of all societies, with archeological moorings that can be traced back to 8000 BC. No other region can even come close to transforming people and culture like the Indus Valley, but the world’s Vedic roots have been ignored, shunned, and covered up. Uncover the history that has been lost and develop a deeper appreciation for the true cradle of human civilization with The Vedic Core of Human History.

This is the road from climate change to primate change. IF YOU THINK YOU ARE YOU, THINK AGAIN. PRIMATE CHANGE is a wide-ranging, polemical look at how and why the human body has changed since humankind first got up on two feet. Spanning the entirety of human history - from primate to transhuman - Vybarr Cregan-Reid's book investigates where we came from, who we are today and how modern technology will change us beyond recognition. In the last two hundred years, humans have made such a tremendous impact on the world that our geological epoch is about to be declared the 'Anthropocene', or the Age of Man. But while we have been busy changing the shape of the world we inhabit, the ways of living that we have been building have, as if under the cover of darkness, been transforming our bodies and altering the expression of our DNA, too. PRIMATE CHANGE beautifully unscrambles the complex architecture of our modern human bodies, built over millions of years and only starting to give up on us now. 'Our bodies are in a shock. Modern living is as bracing to the human body as jumping through a hole in the ice. Our bodies do not know what century they were born into and they are defending and deforming themselves in response'

and the process underlying international environmental lawmaking: the recognition of international interdependence, the negotiation of international agreements and the evolution of international resource management. It examines the general problem of global resource management by means of general principles and case studies and by looking at how and why specific negotiations and agreements have failed to achieve their targets.

The Simplified Chinese edition of *The Giver*, a 1993 American young-adult utopian novel by Lois Lowry. Demonstrates how technology is more than gadgetry, exploring divergent views on technology, and drawing on literature and art to explain how technology can be built to work with ecological systems.
