Child and Adolescent Psychology provides an accessible and thorough introduction to human development by integrating insights from typical and atypical development. This integration cements understanding since the same processes are involved. Knowledge about atypical development informs the understanding of typical development, and knowledge about typical development is a necessary basis for understanding atypical development and working with children with disorders. Based on international research, and informed by biological, social and cultural perspectives, the book provides explanations of developmental phenomena, with a focus on how children and adolescents at different age levels actually think, feel and act. Following a structure by topic, with chronological developments within each chapter, von Tetzchner presents and contrasts the major theoretical ideas in developmental psychology and discusses their implications for different aspects of development. He also integrates information about sensory, physical and cognitive disabilities and the main emotional and behavioral disorders of childhood and adolescence, and the developmental consequences of these disabilities and disorders. Child and Adolescent Psychology is accompanied by online resources for lecturers and students to enhance the book, including essay questions for each chapter, Powerpoint slides and multiple-choice questions. Our topic here is Trauma, discussed in context of Bio-psychosocial Model. This approach gives equal importance to the biological factors along with psychological and social factors in the understanding any psychopathology. Earlier, the Biological model was prevalent but now we are fully aware of various Psychological and Social factors which play equally important role in predisposing, precipitating and perpetuating any medical as well as mental illness. In this book we have published original empirical as well as review papers which were presented by researchers from diverse academic backgrounds and specialties in the 1st International Conference on Biopsychosocial Perspectives of Trauma, 2019 organised by Indian Mental Health & Research Centre at Shia P.G. College. This book is intended for students in psychology and the more cognitively oriented branches of neuroscience, as well as for readers who are merely curious about what these fields might have to contribute to our understanding of the Trauma. However, we hope that our professional colleagues will also find much to engage with here. So we've done our best to produce a book that holds interest on all levels – for undergraduates, graduates, and researchers alike. We have tried not to presuppose any significant background in any of the sciences that we discuss and we hope that this book will serve as a useful companion for many of those pursuing the interdisciplinary study of Trauma.
