Using innovative gardening methods, such as hydroponics, can help your plants mature 25% faster while delivering a 30% increase in yield. It is possible to have your hydroponic garden without having to spend a fortune building it. Almost everyone likes to grow plants or own a garden to enjoy fresh produce instead of the ones filled with chemicals and pesticides. But with time, it is getting tough to find the proper size of land for gardening purposes. But to solve that problem, a modern-day alternative has been developed known as hydroponics. What is hydroponics? Hydroponics is the way of gardening without the usage of soil. It is primarily based on the usage of a solution made up of water and nutrients. This form of gardening is gaining popularity due to the difficulty in finding large spaces nowadays for gardening purposes. Benefits of hydroponics As it is not dependent on soil, it can be done anywhere. Hydroponics use almost 20% less water than soil-based gardening. As you're in control of the environment, the quality of the produced items increases due to the absence of chemicals and pesticides. You can use this for growing plants all-round the year. Tastes the Delicious Fruits of Your Labor today! Simply put, hydroponics is the process of cultivating and growing plants using water based mineral nutrient solutions. It is categorized as a branch of soilless culture. A form of plant cultivation similar to agriculture, but instead of using soil, it uses water to cultivate plants. In this sense, hydroponics is considered a branch of agriculture. The basic idea of the technology is to add plants growing nutrients to water and use that water as a substitute for soil to grow plants. Hydroponics proves that soil does not grow the plants. In fact, it is the combination of water, nutrients and oxygen that makes them grow and produce edible crops. With hydroponics, anyone with the space to house a hydroponics system can grow almost any kind of plant. Soilless culture or water culture dates back to the 16th century when Sir Francis Bacon published it in his book - *Sylva Sylvarum*. Since then, many other scientists and enthusiasts have expounded on the initial work Sir Francis Bacon started and have made soilless culture a successful plant growing system today. Gardening is always a great hobby to be engaged in. There is something very relaxing and enjoyable about cultivating plants and watching them grow. What can top that feeling of exhilaration and self-fulfillment as you are harvesting the edible greens, fruits and vegetables from the plants you have grown yourself? For most people, gardening is probably the most therapeutic and gratifying activities to be engaged in. After all, gardening rewards your efforts with a bountiful harvest of healthy foods

for every row or "gully" ought to be 1 liter each minute. Nitrogen could possibly be depleted over the amount of each gully, consequently line period shouldn't exceed 15 meters so that you can guarantee ample vitamins for all plants. The most important part of a hydroponic method may be the solution. A simple option contains the next: magnesium, calcium, potassium, nitrate, sulfate and dihydrogen phosphate. Hydroponic growers usually produce their very own 'solution dishes' for getting a certain result from a certain species of place. Some regular chemicals for nutrient options are copper metal, zinc, boron. Speculation holds that different combinations of compounds make a place that is solid with high-yield and value that is extraordinary. The advantages of hydroponic growth are many. Indoor- advancement pest management implies too little pesticides. Large-scale hydroponics may employ less than 1/20 the amount of water being a regular park to make precisely the same amount of food. The environment of a hydroponics greenhouse is closely managed, indicating utmost efficiency. This implies we are able to increase food using hydroponic systems everywhere in the world, at any heat, in almost any season! Furthermore, hydroponic herbs can be enhanced to provide more vitamins and minerals.

**** B/W EDITION **** Do you want to discover a scientific technique for building your own hydroponic garden? Then keep reading... Hydroponics is a means of growing plants without soil. It makes use of nutrient-rich water or a nutrient solution as well as techniques that allow the plant to grow. You can also use sand or gravel, with added nutrients. In this chapter, you are going to learn the history of the growing art that we call hydroponics. You will also learn about some of its practical uses throughout history. Traditionally, the soil is used to grow plants. It was thought that soil was necessary since plants started out in the earth, with nutrient-rich soils like the strawberry plants that were first grown in the wild before being cultivated for gardens. At some point in history, it was discovered that the soil was not necessary for the growing process. Rather, the role of soil is to act as a reservoir to hold the nutrients that a plant needs in order to grow. Crops grown hydroponically, according to studies, grow faster and healthier and are better than crops grown on soil; this is because they would not have to go through a lot of disadvantages that the soil may

present, such as; situations of a break out of a soil-borne disease in the area, the struggle to have to push its way through the soil during germination, the attack from organism and pests that live in the soil. And of course, the plants in hydroponic systems do not have to 'hustle' for nutrients and water because this is basically what they are planted in, in hydroponic systems-water-based mineral nutrient solutions. Hydroponics also helps you save water, which sounds a bit strange when you think of water is essential for this process. Usually, it's every alternate day so that the soil soaks up the water and is transported to the roots. That sounds fine, doesn't it? But that's only a portion of the big picture. Some of the water is bound to seep out of the container, some of it evaporates, and a portion of it seeps further into the soil beyond the plant's roots. So, in practice, the plant essentially only uses up a small portion of the water. Hydroponics uses a simple recirculating mechanism that ensures that the water is fully soaked up by the roots. It means that the portion of water that isn't absorbed by the plant is directly sent to the reservoir. The same water from the reservoir is later pumped up to the plants. Since the reservoir is shut tight, there is no chance for the water to evaporate, and it certainly will not seep out of the bottom of the container. You can save around 80% of the water by switching to hydroponics instead of using regular soil gardening. This book covers the following topics: Equipment Hydroponic Growing System Plant necessities Best plant for hydroponics Pest and disease Choosing the right site for your garden Maintenance of your hydroponic garden And Much More! Learn the Secrets of Hydroponics and Boost your Gardening Skills! Do you want to grow your own food, but lack the space outside? Are you looking for a new challenge where the goal is to provide healthy food for your family? Do you want to create your very own soil-free garden? If you answered Yes to any of those questions, this book is for you - so keep reading! Among modern methods of growing crops, Hydroponics occupies a special place because of the many benefits it offers. It is nothing more than means the cultivation of plants without soil but in water. And the water is enriched with nutrients. The history of the emergence of hydroponics is associated with centuries of research by scientists, as a result of which a huge number of experiments were carried out that made it possible to determine the optimal balanced nutritional composition to ensure the vital activity of plants. As it turned out, the soil environment for crops is not necessary: plants successfully grow and develop if their root system is in contact with an aqueous medium containing all the necessary substances. This fact became fundamental for the development of hydroponics as a new method of crop production. Through hydroponics, you no longer have to worry about removing weeds, and fighting pests in the soil. Plants that grow in a hydroponic system are

healthier and grow faster. Another advantage is that through specific extensions, a hydroponic system can also be supplied semi-automatically or fully automatically. Therefore, it is particularly suitable for those who do not have a large garden, guaranteeing perfect results. Hydroponics is important as its further development and improvement of which will help solve the global problems of humankind, including the most significant among them - providing food to an ever-growing number of people on our planet. space for traditional gardens is not available. Nutrients and water are distributed naturally in soils, so plants spend a lot of effort to locate the water and nutrients by developing roots to reach them. Nutrients and water are supplied directly to roots in a hydroponic greenhouse, enabling plants to expand faster and earlier, mainly because they devote all their efforts into rising above the land, rather than below it. So, it gives higher than average yields. Hydroponics will also allow you to produce more plants per square meter because they do not have to fight with weeds and each other for food and water in the dirt; grain and water are provided directly to them. But these are only some of the advantages of Hydroponics. This book will cover the following topics: Basics Of Hydroponics And Its Advantages Tools And Equipment The Proper Lighting Systems The Different Hydroponic Systems Essential Information On Water Quality Best Plants To Grow Hydroponically Troubleshooting For Hydroponics ...And so much more! receive the right lighting and humidity. It is also essential to know that most plants 0?3 fruits, herbs and vegetables, may be grown hydroponically. However, it is important to note that some may thrive better in a hydroponic garden because of certain conditions, such as the limitations of your space, the appropriateness of your chosen system and the extensiveness of your experience in hydroponic gardening. This resource material will point you to the right crops that can successfully be grown in a hydroponic garden, as well as some pointers on how to extend your plants' growing season and ensure excellent yields during harvest time. With its own fair share of challenges and rewards, Hydroponics Gardening is a great way to unleash the powers of your green thumb, ensure healthy consumption of fruits and vegetables as well as promote sustainability from the garden to the dining table. Do you want to learn how to easily build an inexpensive DIY hydroponic growing system, cultivate organic vegetables, fruit and herbs at home with hydroponics? If yes, then keep reading... Almost all plants can be grown using hydroponics. When crops are grown in this way, they use up 50% less land and 90% less water when contrasted with traditional crop growing methods. However, the yields from the crops are 4 times more, and the crop growth rate is twice as fast when using hydroponics. This is possible because the crops have everything they would need, at the right concentrations. In place of the soil used in typical agriculture, the farmer or gardener roots the plants in compounds like vermiculite, clay pellets or rock wool. All substances used must be inert so that they do not introduce any new elements into the plant's environment. The solution of water and nutrients is then poured over the support material so that the plant can feed into it. There is also less reliance on fertilizers, pesticides and other potentially harmful products used in conventional agriculture. This book covers the following topics: Introduction
