Drawing on their work on performance management within the 'beyond budgeting' movement over the past ten years, including many interviews and case studies, Jeremy Hope, Peter Bunce and Franz Rösli set out in this book an executive guide to building a new management model based on eight key change management issues: 1. Governance: From rules and budgets to purpose and values 2. Success: From fixed targets to relative improvement 3. Organization: From centralized functions to customer-

oriented teams 4. Accountability: From narrow targets to holistic success criteria 5. Trust: From central control to local autonomy 6. Transparency: From closed information to open book management 7. Rewards: From individual incentives to team-based reward 8. Risk: From complying with rules to understanding pressure points This book is about rethinking how we manage organizations in a post-industrial, post credit crunch world where innovative management models represent the only remaining source of sustainable competitive advantage.[i] The changes suggested by the authors will enable and encourage a cultural climate change that will help organizations to attract and keep the best people as well as drive continuous innovation and growth. Above all, The CEO's Dilemma is about learning how to change business - based on best practice and innovation drawn from leaders world-wide who have built and managed successful organizations.

In the twenty-first century, as traditional divides are redefined, bargaining over corporate responsibilities has increasingly centred around corporate reputation and the question of whether businesses are part of society's problems or part of their solution. This ground-breaking book treats issues, strategies and societal interaction in a homogenous manner and analyzes the nature of the international bargaining society as it has matured. Discussing and contextualizing contemporary debates on international corporate social responsibility, globalization and the impact of reputation, this key text integrates them into a new and coherent framework: Societal Interface Management. Using this unique framework, it explores the interfaces between international corporations, governments and civil society representatives. Analytic and revealing, the text applies the framework to in-depth studies of Nike, Shell, Triumph International, GlaxoSmithKline and ExxonMobil. It investigates the conflicts surrounding Burma, blood diamonds, child labour, oil spills, food safety, patents on HIV/AIDS medication and labour rights that have resulted in a large number of disciplining activities. An accompanying website (www.ib-sm.org) contains additional case studies, as well as issue dossiers on the challenges confronting international firms. Drawing on a wealth of experience both in research and teaching, the authors have developed a text that integrates reputation, responsibility, ethics and accountability. Clearly constructed, it is a must-have book for all those studying or teaching business ethics, political economics, economic geography, public relations, and corporate social responsibility.

There are many good AI books. Usually they consecrate at most one or two chapters to the imprecision knowledge processing. To our knowledge this is among the few books to be entirely dedicated to the treatment of knowledge imperfection when building intelligent systems. We consider that an entire book should be focused on this important aspect of knowledge processing. The expected audience for this book - includes undergraduate students in computer science, IT&C, mathematics, business, medicine, etc. , graduates, specialists and researchers in these fields. The subjects treated in the book include expert systems, knowledge representation, reasoning under knowledge Imperfection (Probability Theory, Possibility Theory, Belief Theory, and Approximate Reasoning). Most of the examples discussed in details throughout the book are from the medical domain. Each chapter ends with a set of carefully pedagogically chosen exercises, which complete solution provided. Their understanding will trigger the comprehension of the theoretical notions, concepts and results. Chapter 1 is dedicated to the review of expert systems. Hence are briefly discussed production rules, structure of ES, reasoning in an ES, and conflict resolution. Chapter 2 treats knowledge representation. That includes the study of the differences between data, information and knowledge, logical systems with focus on predicate calculus, inference rules in classical logic, semantic nets and frames.

Against the backdrop of a global economic crisis, the IMFC has underscored the Fund's central role in responding to its membership's needs and restoring prosperity and financial stability. The Fund has acted with alacrity—by overhauling its lending framework; mobilizing strong support and firm pledges toward a tripling of its resources; and continuing to strengthen the quality of its surveillance. The work program is heavy, reflecting the responsibilities assigned to the Fund by the international community and the needs of our membership. This book analyzes new theories and practical approaches for promoting excellence in human resource management and leadership. It shows how the principles of creating shared value can be applied to ensure faster learning, training, business

development and social renewal. In particular, it presents novel methods and tools for tackling the complexity of management and learning in both business organizations and society. Gathering the proceedings of the AHFE 2021 Conferences on Human Factors, Business Management and Society, and Human Factors in Management and Leadership, held virtually on July 25-29, 2021, from USA, this book provides researchers and professionals with extensive information, practical tools and inspiring ideas for achieving excellence in a broad spectrum of business and societal activities.

Over the years I watched many work of arts take place and saw how those concerned took care of their problems. There I realized that management is truly an artistic work. A case in point: In the city of Calabar in the Cross River State of Nigeria, there was a tailoring company that employed only men, but the irony is that they made women's dresses. There were other women's tailoring companies managed by women, but for some reason, most women preferred buying from the only tailoring company managed by men in the city of Calabar. During the company's general meeting, an employee stood up and asked the company to employ a few women in the interest of progress. Many employees objected to the request that women be asked to come forward and fill out forms and be subjected to the same rigorous interview as any qualified candidate who wants to be employed; they suggested that the company may be moving toward the production of substandard dresses. The author of the idea refused to take no for an answer, because the management always turned down women candidates. A few months later, the president and the chief executive officer (CEO) joined the crusade of employing women. Months after the president and CEO joined in, two women were employed, and they brought in their own fresh perspectives, including dresses for big women (whom they never called fat women). About ten years later, there were more than seven branches of the company, most of which were managed by women. I think life itself is a container of arts and strategies. This book is made up of cases, artistic expressions, and strategic maneuverings to enable my readers to understand the core concepts of effective management.

This book constitutes the proceedings of the 16th International Conference on Business Process Management, BPM 2018, held in Sydney, Australia, in September 2018. The workshop, sponsored by Shanghai Jiao Tong University and Technical University of Berlin brought together scientists and researchers from both universities to present and discuss the latest progress on autonomous systems and its applications in diverse areas. Autonomous systems are designed to integrate machines, computing, sensing, and software to create intelligent systems capable of interacting with the complexities of the real world. Autonomous systems represent the physical embodiment of machine intelligence. Topics of interest include, but are not limited to theory and modeling for autonomous systems; organization of autonomous systems; learning and perception; complex systems; multi-agent systems; robotics and control; applications of autonomous systems.

Business Management for the IB Diploma Coursebook Cambridge University Press

This volume presents the main results of 2011 International Conference on Electronic Engineering, Communication and Management (EECM2011) held December 24-25, 2011, Beijing China. The EECM2011 is an integrated conference providing a valuable opportunity for researchers, scholars and scientists to exchange their ideas face to face together. The main focus of the EECM 2011 and the present 2 volumes "Advances in Electronic Engineering, Communication and Management" is on Power Engineering, Electrical engineering applications, Electrical machines, as well as Communication and Information Systems Engineering.

In this volume the methodological aspects of the scenario logic and probabilistic (LP) non-success risk management are considered. The theoretical bases of scenario non-success risk LP-management in business and engineering are also stated. Methods and algorithms for the scenario risk LP-management in problems of classification, investment and effectiveness are described. Risk LP- models and results of numerical investigations for credit risks, risk of frauds, security portfolio risk, risk of quality, accuracy, and risk in multi-stage systems reliability are given. In addition, a rather large number of new problems of estimation, analysis and management of risk are considered. Software for risk problems based on LP-methods, LP-theory, and GIE is described too.

This volume, the 6th volume in the DRUMS Handbook series, is part of the after math of the successful ESPRIT project DRUMS (Defeasible Reasoning and Uncertainty Management Systems) which took place in two stages from 1989-1996. In the second stage (1993-1996) a work package was introduced devoted to the topics Reasoning and Dynamics, covering both the topics of 'Dynamics of Reasoning', where reasoning is viewed as a process, and 'Reasoning about Dynamics', which must be understood as pertaining to how both designers of and agents within dynamic systems may reason about these systems. The present volume presents work done in this context. This work has an emphasis on modelling and formal techniques in the investigation of the topic "Reasoning and Dynamics", but it is not mere theory that occupied us. Rather research was aimed at bridging the gap between theory and practice. Therefore also real-life applications of the modelling techniques were considered, and we hope this also shows in this volume, which is focused on the dynamics of reasoning processes. In order to give the book a broader perspective, we have invited a number of well-known researchers outside the project but working on similar topics to contribute as well. We have very pleasant recollections of the project, with its lively workshops and other meetings, with the many sites and researchers involved, both within and outside our own work package.
