This book describes geriatrics practice models that are used to guide the care of older adults, allowing seniors to remain at home, prevent functional disability and preserve quality of life. The models include specific interventions which are performed by health care workers to address the needs of older persons and their caregivers. These models respect patient values, consider patient safety and appreciate psychosocial needs as well. Divided into six parts that discuss hospital-based models of care, transitions from hospital to home, outpatient-based models of care and emergency department models of care, this text addresses the needs of vulnerable patients and the community. Geriatric Models of Care is an excellent resource for health care leaders who must translate these programs to address the needs of the patients in their communities.

Many social workers find themselves in management positions within a few years of graduating from MSW programs. Most of these jobs are in nonprofit human service organizations in which, increasingly, business acumen is necessary to maintain grants and donations, start new programs, market services to clients, supervise the finance function, and understand the external environment. This book teaches MSW students and early-stage social work management practitioners the essential business skills needed to manage programs and organizations; to improve their overall management toolkit for finding a better job or getting promoted; and, ultimately, to gain parity with other managers holding MBA degrees and working in the human service space. This text can serve as a desk reference for managers to troubleshoot various situations. It is also appropriate for social work macro practice courses at the undergraduate and graduate levels, as well as courses that cover human resource management and financial management.

Since the dawn of human history people have been facing problems arising from the operations of systems in which they themselves are a part. However, the idea that systematic scrutiny in the spirit of science can help solve them, became widespread only in this century. The Handbook of Systems Analysis brings together in systematic form the core of the systems analysis knowledge and experience it has developed so far. The Handbook of Systems Analysis consists of three volumes: the first offers an overview aimed at a widely varied audience of practitioners and those interested in the problems treated by systems analysis; volume two is aimed at a more technical audience and deals with how a systems analysis study proceeds and resolves the technical and professional issues. Now this third volume exemplifies the general principles and wide variety of practice by means of eight carefully selected cases described by the principal analysts involved. Like the first volume, it is accessible to a wide variety of people ? professional and non-professional ? who are interested in how such work is carried out and what its useful effects can be. Features include: a comprehensive approach without undue technical detail, giving a clear view of what was done and how it achieved its aims an overview discussion drawing together the aspects of the practice exemplified by the cases a truly international approach ?

changing demands? How can university leaders position existing resources to effectively address these and other emerging challenges with a sense of opportunity rather than dread? How can organizations be redesigned to sustain change while achieving excellence? As student affairs organizations have grown and become increasingly complex in order to meet new demands, they have often emphasized the expansion of their missions to the detriment of focusing on understanding their roles in relationship to other units, to reviewing their cultures and structures, and to considering how they can improve their effectiveness as organizations. This book provides the tools for organizational analysis and sustainability. Intended for practitioners, graduate students, interns and student affairs leaders, this book presents the key ideas and concepts from business-oriented organizational behavior and change theories, and demonstrates how they can be useful in, and be applied to, student affairs practice – and, in particular, how readers can use these theories to sustain change and enhance their organization’s ability to adapt to complex emerging challenges. At the same time it holds to values and perspectives that support the human dimension of organizational life. Recognizing the complexity of today’s organizations and the value of viewing them from multiple perspectives, this book follows the emerging practice of providing three general epistemological perspectives – the Positivist, Social Constructionist, and Postmodernist – for analyzing often paradoxical organizational structures, environments, and behavior. The book explores the environmental context of student

affairs, and how the organization interacts with both the internal and external environments; examines the human dimension of organizations, through a review of individual attributes, human need and motivation, social comparison theory and organizational learning theory; presents the dimensions of structure and design theory and discusses why student affairs organizations need to think differently about how they organize their resources; considers the context and process of organizational change, and the dynamics of decision making, power, conflict and communication; addresses the role of assessment and evaluation; and new forms of leadership. Each chapter opens with a case study, and closes with a set of reflective questions. The authors have all served as practitioners within student affairs and now teach and advise graduate students and future leaders in the field.

The United States has enduring national and strategic interests in the polar regions, including citizens living above the Arctic circle and three year-round scientific stations in the Antarctic. Polar icebreaking ships are needed to access both regions. Over the past several decades, the U.S. government has supported a fleet of four icebreakers -- three multi-mission U.S. Coast Guard ships (the POLAR SEA, POLAR STAR, and HEALY) and the National Science Foundation's PALMER, which is dedicated solely to scientific research. Today, the POLAR STAR and the POLAR SEA are at the end of their service lives, and a lack of funds and no plans for an extension of the program has put U.S. icebreaking capability at risk. This report concludes that the United States should continue to support its interests in the Arctic and Antarctic for multiple missions, including maintaining leadership in polar science. The report recommends that the United States immediately program, budget, design, and construct two new polar icebreakers to be operated by the U.S. Coast Guard. The POLAR SEA should remain mission capable and the POLAR STAR should remain available for reactivation until the new polar icebreakers enter service. The U.S. Coast Guard should be provided

Training and Development For Dummies shows you how to reap these benefits, with step by step guidance and essential expert insight. The adults in our schools need nurturing, too--not just the students. There is great need among faculty and staff for affirmation, healing, encouragement, support, and celebration. Some of those needs can be met through programs and services, others by extending ourselves personally to those with whom we work. This vision paper offers ideas for nurturing the spirits of the faculty and staff, and includes reflection questions, a survey on staff spiritual enrichment, and a bibliography. This monograph was written using insights from teachers and campus ministers from Catholic schools around the country after several three-day workshops titled "The Catholic High School as Faith Community," and more recently, workshops titled "Nurturing Spirituality with Faculty and Staff," sponsored by Saint Mary's Press. Saint Mary's Press grants permission to photocopy this vision paper for use with the faculty and staff in your school, or you may purchase multiple copies for \$3.00 each.

solidifies the concepts of curriculum and leadership in experiential learning contexts, and promotes democratic action and critical thinking. Author Carol A. Mullen uses a descriptive, qualitative approach that integrates case study, data analysis, personal reflection, and lessons learned. Among the most important elements of the book are: \*the inclusion of the voice and curricular experiences of the professional student who is a seasoned teacher or beginning administrator; \*detailed illustrations of practitioners' experiences as curriculum makers and action researchers; \*an articulation of the links among curriculum development, constructivist curricula, and mentoring scaffolds; and \*practical exercises to accompany case studies. Graduate and advanced undergraduate students in education will find this textbook of value in their coursework, as will curriculum professionals who teach practicing teachers.

In response to the Chief of Naval Operations (CNO), the National Research Council appointed a committee operating under the auspices of the Naval Studies Board to study the national security implications of climate change for U.S. naval forces. In conducting this study, the committee found that even the most moderate current trends in climate, if continued, will present new national security challenges for the U.S. Navy, Marine Corps, and Coast Guard. While the timing, degree, and consequences of future climate change impacts remain uncertain, many changes are already underway in regions around the world, such as in the Arctic, and call for action by U.S. naval leadership in response. The terms of reference (TOR) directed that the study be based

on Intergovernmental Panel on Climate Change (IPCC) scenarios and other peer-reviewed assessment. Therefore, the committee did not address the science of climate change or challenge the scenarios on which the committee's findings and recommendations are based. National Security Implications of Climate Change for U.S. Naval Forces addresses both the near- and long-term implications for U.S. naval forces in each of the four areas of the TOR, and provides corresponding findings and recommendations. This report and its conclusions are organized around six discussion areas--all presented within the context of a changing climate.
