Information technology (IT) projects are unsuccessful at a rate of 65% to 75% annually, in spite of those undertaking these projects employing the latest technologies and spending significant amount of time and money on training and educating employees. Although, many researches have been conducted on project successes in American companies, there is a lack of research analyzing the impact of various factors on software project success in offshore IT companies. The purpose of the quantitative study undertaken for the purpose of this book is to enhance the understanding the impact of various factors on software project success in offshore IT companies.

Business organizations, both public and private, are constantly challenged to innovate and generate real value. CIOs are uniquely well-positioned to seize this opportunity and adopt the role of business transformation partner, helping their organizations to grow and prosper with innovative, IT-enabled products, services and processes. To succeed in this, however, the IT function needs to manage an array of inter-related and inter-dependent disciplines focused on the generation of business value. In response to this need, the Innovation Value Institute, a cross-industry international consortium, developed the IT Capability Maturity Framework™ (IT-CMFTM). This second edition of the IT Capability Maturity Framework™ (IT-CMFTM) is a comprehensive suite of tried and tested practices, organizational assessment approaches, and improvement roadmaps covering key IT capabilities needed to optimize value and innovation in the IT function and the wider organization. It enables organizations to devise more robust strategies, make better-informed decisions, and perform more effectively, efficiently and consistently. IT-CMF is:

- An integrated management toolkit covering 36 key capability management disciplines, with organizational maturity profiles, assessment methods, and improvement roadmaps for each.
- A coherent set of concepts and principles, expressed in business language, that can be used to guide discussions on setting goals and evaluating performance.
- A unifying (or umbrella) framework that complements other, domain-specific frameworks already in use in the organization, helping to resolve conflicts between them, and filling gaps in their coverage.
- Industry/sector and vendor independent. IT-CMF can be used in any organizational context to guide performance improvement.
- A rigorously developed approach, underpinned by the principles of Open Innovation and guided by the Design Science Research methodology, synthesizing leading academic research with industry practitioner expertise.

IT-CMF provides us with a structured and systematic approach to identify the capabilities we need, a way to assess our strengths and weaknesses, and clear pathways to improve our performance.’ Suresh Kumar, Senior Executive Vice President and Chief Information Officer, BNY Mellon ‘To successfully respond to competitive forces, organizations need to continually review and evolve their existing IT practices, processes, and cultural norms across the entire organization. IT-CMF provides a structured framework for them to do that.’ Christian Morales, Corporate Vice President and General Manager EMEA, Intel Corporation ‘We have successfully applied IT-CMF in over 200 assignments for clients. It just works. Or, as our clients confirm, it helps them create more value from IT.’ Ralf Dreischmeier, Senior Partner and Managing Director, The Boston Consulting Group ‘By using IT-CMF, business leaders can make sure that the tremendous potential of information technology is realized in their organizations.’ Professor Philip Nolan, President, Maynooth University ‘I believe IT-CMF to be comprehensive and credible. Using the framework helps organizations to objectively identify and confirm priorities as the basis for driving improvements.’ Dr Colin Ashurst, Senior Lecturer and Director of Innovation, Newcastle University Business School

The purpose of this book is to shed light on the performance and personal competencies of information technology (IT) project managers in

South Africa. Predictive models are built to determine what project managers consider the crucial competencies they should possess to deliver an IT project successfully. This investigation takes place in the context of poor IT project success rates globally and, in particular, in South Africa. This novel research seeks to extend the debate on project success beyond what constitutes success or failure, but seeks to find clarity in what IT project managers believe are the essential competencies in practice. This quantitative research gathered data by way of an online survey based on literature regarding the Project Management Competency Development Framework (PMCDF). The population consisted of IT project managers in South Africa. Four hundred and two respondents chose to share their insights. Through the use of descriptive and multivariate statistics, major competency factors were identified. These factors were used in structural equation modelling to build various validated predictive models. This book contributes to the current body of knowledge by uncovering the competencies that IT project managers consider themselves competent in. The structural equation models indicated predictors of perceived competence by IT project managers and where these perceived competencies differ from literature. Twelve managerial implications are highlighted in the final chapter that seek to draw the myriad threads together into a coherent summary. It is apparent that IT project managers do not consider the PMCDF important in its entirety, but instead choose to focus on certain competencies.

A trail of mismanaged or terminated projects in recent years has cost the North American economy \$100 to \$150 billion dollars annually in lost productivity and shareholders capital. Unfortunately, the gap between project selection and project execution is often symptomatic of the onset of Project Fog, an all too familiar business situation in which projects are started and stopped constantly; resources fall short of the project workload to be executed; and, in the end, the entire effort is seen as a failure. A guide to sidestepping the usual hazards that often spell Project Fog, this book bridges the gap between executives who develop strategy and decide what projects get approved, and the project managers who have to execute those projects flawlessly. It provides a roadmap so that project managers can partner with executives to align their portfolio of projects with overall business strategy, ensuring that things get done right.

Communication is frequently identified in the literature as a major factor impacting Information Technology (IT) project failure. The importance of communication is amplified in buyer - seller relationships through the long-term impact of project failures on the future business of IT vendors with their customers. The formal communication between IT project sponsors from buyer firms and project managers from IT vendor firms within business to business markets is investigated through this study. Typical communication patterns between project sponsor and manager in high and low performing projects are identified. The antecedents of these patterns are assessed and the effectiveness of project sponsor - manager communication investigated. A multi-method approach is used with a quantitative analysis of a worldwide survey with 200 responses, followed by a qualitative analysis of three interviews with pairs of project sponsor and manager, each pair from the same project. Results show that project sponsors expect more analytic and verbal communication from project managers. A model shows the development from frequent informal communication to formal communication between project managers and sponsors. A second model shows how communication in high performing projects is determined by the level of collaboration between project managers and sponsors, as well as the degree of structure in project execution. Effectiveness of project sponsor and manager communication is found to be decreased through written statements about recent achievements, and increased through face-to-face meetings of the parties. A series of recommendations is provided to improve project sponsor - manager communication.
