Accessible, flexible, authoritative, and up-to-date. These words accurately describe the latest edition of Mayo Clinic Images in Internal Medicine: Self-Assessment for Board Exam Review. Designed to highlight important teaching points, the book is an invaluable tool for physicians in training and clinicians preparing for certification or recertification in internal medicine, or medical clerkship review. It contains 173 cases with 287 color images and ABIM-type multiple-choice review questions, answers, and explanations.

Emergency medicine attendings who wish to hone their teaching skills can find a number of books on educational strategies written by physicians from other disciplines. However, until the publication of the first edition of this book, they did not have access to a text written by emergency medicine physicians on methods of teaching that are directly applicable to teaching EM. This book was compiled to meet that need. Following the introductory section, which provides important background information, the book's contents are organized into 4 sections that correspond to the core needs and interests of EM educators: Section 2 focuses on practical and ethical considerations of teaching in the ED;

Section 3 provides strategies for teaching specific groups of learners; Section 4 looks at the skills that are characteristic of the best EM educators; and Section 5 looks in depth at specific teaching techniques and strategies. Now more than ever this book addresses the needs of physician educators from all over the world. New chapters discuss lecturing to an international audience; using simulation as a teaching tool; how to make journal club work for you, and other topics that are of broad interest to medical educators in this field. In general, each chapter has been updated and reviewed to make sure the content was something that emergency physician educators could use in any country. The chapter contributors are widely regarded as leaders in the field of emergency medicine education and faculty development. Authors were given free rein to develop their chapters and write in their own style. They were asked to present their personal views on how to successfully teach the art of emergency medicine, rather than review evidence-based guidelines regarding medical education. As a result, most of the chapters have few references. This first-person approach to a multi-authored textbook yields a compilation that varies in style from chapter to chapter and exposes the reader to a variety of communication techniques.

This practical book aims to cover the whole scope of clinical endocrinology, including both common and selected rare but important diseases, with an

emphasis on practical clinical management. A number of different questions and problems in clinical routine are discussed in this book in an unconventional format. Each topic begins with the presentation of a typical clinical case, and then the topic is approached in a question and answer format linked to the clinical case presented, highlighting the most important questions in diagnosis, differential diagnosis and therapy. Numerous figures and tables are included to help understanding. The book is chiefly intended for doctors in training (preparing for boarding exam in endocrinology or internal medicine), but also for established clinicians who want to broaden or refresh their skills. University students of medicine can also find this book interesting.

Best of Five MCQs for the Acute Medicine SCE is a new revision resource designed specifically for this high-stakes exam. It contains over 350 Best of Five questions with explanatory answers, each accurately reflecting the layout of questions in the exam.

This question-and-answer review book is an excellent aid for candidates preparing for the board exam in occupational medicine and an ideal structured learning guide for physicians. It contains approximately 500 questions, with answers and explanations, based on Robert McCunney's comprehensive text, *A Practical Approach to Occupational and Environmental Medicine, Third Edition*.

Two additional chapters present practical strategies for preparing for and taking the board exam. The American College of Occupational and Environmental Medicine (ACOEM) designates each of the four sections of this review for a maximum of 22.5 credits in Category 1 of the American Medical Association's Physician's Recognition Award.

Designed for rapid reading, this book is a condensed, targeted, high-yield review for the American Board of Internal Medicine certification and recertification exams. Content is derived primarily from interviewing hundreds of physicians who have recently taken their exams, and from Dr. Peikari's successful "Own the Boards" course for candidates. By covering questions that candidates often miss—such as probability estimation and triple acid-base disorders—the book will boost your score enough to pass the exam with ease. Selected "homework" problems and practice mini-tests with answers are included. A companion Website provides 90 images similar to those on the exam from disciplines such as dermatology, ophthalmology, hematology, rheumatology, and cardiology. Updated with current facts, figures, and fees, this directory profiles all AMA, AOA, and ADA accredited medical, osteopathic, and dental schools in the United States and Canada. Every school profile provides up-to-date information on tuitions and fees, admission requirements, application procedures, available financial aid, a curriculum

description, grading and promotion policies, teaching and library facilities, housing facilities, and special features and programs. In addition to its comprehensive directory section, this book is also a practical guidance manual for students who are contemplating careers in medicine and dentistry. It presents MCAT and DAT test-taking advice, and sample essays written by medical school applicants. Additional features include a model MCAT (Medical College Admission Test) with an answer key for self-scoring, selected questions with answers from recent DATs (Dental College Admission Tests), a self-assessment admission profile, a sample medical school application form, detailed advice on medical career opportunities for women and minorities, and much more.

Pocket Guide to the American Board of Emergency Medicine In-Training Exam
Cambridge University Press

Every year emergency medicine resident physicians participate in the American Board of Emergency Medicine (ABEM) In-Training Examination to assess their medical knowledge. Preparing for the examination involves assembling several different resources on a wide range of topics. Many resources are either too detailed or too superficial, limiting their effectiveness. Pocket Guide to the American Board of Emergency Medicine In-Training Exam is designed specifically for the Emergency Medicine Resident Physician as an aid to reviewing for the In-Training exam. Pertinent information is organized under the same topics as the examination. The concise text and tables deliver information quickly and a rapid review section allows for self-assessment. In addition, the small portable size enables revision whenever and wherever you are. Pocket Guide to the American Board of Emergency Medicine In-Training Exam is the only resource you will need for In-Training Examination

A critical problem in resource-scarce countries across the globe is the shortage of appropriately trained health care providers. According to the World Health Organization, the current global health workforce shortage of 7.2 million providers is estimated to increase to 12.9 million by 2035. This disproportionately affects resource-scarce countries, denying basic health care to millions and limiting access to life-saving treatments. Due to limited resources in these countries, not enough health professionals receive training, few have the opportunity for continuing education, and the ability to develop or implement educational programs and curricula is constrained. Additionally, many existing providers choose to emigrate in pursuit of professional advancement opportunities, contributing to the overall shortage of qualified health care providers in these environments. Efforts to strengthen health workforce capacity not only increases access, safety and availability of care, but is critical to building resilient health systems capable of caring for the world's neediest populations. This requires not only cultivating new health care providers, but also providing ongoing professional development to retain and support current providers, advancing the level of practice in accordance with current clinical science, cultivating educators, and enhancing training curricula. It is critical also to contribute to the limited body of research documenting the effectiveness and impact of various models of collaborative education and partnership to improve health worker training and retention. This Research Topic examines strategies for building health workforce capacity through the prism of educational partnerships, offering significant examples of effective models of international collaborative education as well as insight and guidance on the structure and operation of successful global partnerships. Collectively, the 31 articles accepted and included

in this eBook represent a diversity of health professions and geographies across academic, non-governmental organizations and other global partnership forms. The published manuscripts highlight various elements of partnerships with several consistent themes emerging: capacity building, local empowerment, mutual trust and respect, long-term commitment, equity, collaboration, and the importance of integrating theory and practice, for a balance of academic and clinical development. The manuscripts provide examples of partnership and educational programs that are in the formative, early stages of implementation and others which have been sustained long term, some for decades. The following eBook is divided into two parts, with each part broken down into sections. Part I of the eBook includes 18 manuscripts that showcase long-term educational programs that strongly exemplify multiple, foundational aspects of international partnerships in education including mutual collaboration and project management, empowerment of host partners to lead and sustain programs, and capacity building. While individual manuscripts included in Part I look broadly at multiple aspects of successful, international partnerships in education, Part II manuscripts focus intently on one-two elements. Part II includes 13 articles that highlight partnership through short- rather than long-term educational initiatives as well as program development and broad academic partnerships. This Research Topic was sponsored by Health Volunteers Overseas – a United States based non-profit that collaborates with over eighty international universities and health institutions to send volunteer health professionals to low-resource countries to provide continuing education, train the trainer courses, professional support, and consultation on academic program and curricula development.

and administrative components necessary to run an academic medical practice. From a group of expert faculty from the Society of General Internal Medicine (SGIM) with years of experience in managing academic medical practices, this manual offers comprehensive guidance to the clinic director regarding critical factors involved with running an academic medical practice including, but not limited to: compliance with Accreditation Council for Graduate Medical Education (ACGME) requirements, clinic orientation and curricula implementation, clinic workflow challenges, billing, coding, and the Primary Care Exception Rule, productivity metrics and quality indicators, evaluation and feedback for trainees, faculty, and clinic staff, implementation of a Patient Centered Medical Home (PCMH), development of controlled substance prescribing policies, medical student involvement in resident clinics, and Veteran Affairs practices and non-traditional care settings. The scope of this book is sufficiently broad to be comprehensive and practical while still anticipating the further evolution of the academic medical practice in the years to come. Each chapter focuses on a particular aspect of clinic leadership and will offer real-world examples and management “pearls” for the clinic director. Chapters highlight common challenges and solutions and should be useful across disparate practice settings. This is an ideal resource for clinic directors, core faculty, and clinic leadership in academic outpatient medical practices, particularly those within the field of Internal Medicine, Primary Care, and related specialties.

Importance of study are exciting and rapidly advancing fields of medical science. Our understanding of General Medicine has increased considerably over the last few decades. Furthermore, there is such an overwhelming body of knowledge that it is generally difficult to discern what is important to know in the General Medicine. We have put together this book in order to assist the readers in the learning process. This book may be useful for medical students, ophthalmology residents, practicing ophthalmologists, nurses, internal medicine and those who would like to practice on sample questions in General Medicine. Our past experiences in International Council of Ophthalmology (ICO) exams as well as in MRCS/FRCS examinations reveal that General Medicine are always very difficult for exam candidates. Hence, our attempt to bring together a comprehensive question bank in order to assist those candidates. We have introduced a new format which is putting the answers below the questions therefore the readers can find the answers more easily. Correct answers had been mentioned in bold as well as in detail explanation in order to assist the readers to find a more comprehensive review. We hope that this approach makes the book more user-friendly. First section of the Basic and Clinical Science Course (BCSC) book series by American Academy of Ophthalmology (AAO) was used as the main reference. As the educational requirements have grown, learning processes have changed. Each year, an increasing number of our colleagues

This book is a bold and useful tool that provides the concepts, principles, and facts needed to build and to strengthen a career in academic medicine. Developing a high level of competency in academia requires the development of skills in addition to those in one's own specialty or discipline. One needs skills for conducting research, meeting administrative responsibilities, and educating students and colleagues. These skills are not bells and whistles. They are the elements of academic life that make the position truly academic. This book provides the critical information needed to succeed in that world. Until now many academicians have learned about elements of their job outside their individual discipline by experience and through the observation of role models and mentors. In the complex, highly competitive, rapidly changing world of academic medicine there is no longer time for a prolonged apprenticeship. The institution is endangered when individuals are selected for critical posts based upon skills in areas that may not be central to the principal responsibilities of the new position. How often one hears: "He is a great scientist but he runs his department with a shoe box mentality." "She is a fantastic clinician, but she runs a committee as if she knows everything. I hate working with her." "How can a full professor be such a lousy

teacher?" All of the above are symptoms of the need for special skills.

This book examines the challenges of cross-professional comparisons and proposes new forms of performance assessment to be used in professions education. It addresses how complex issues are learned and assessed across and within different disciplines and professions in order to move the process of "performance assessment for learning" to the next level. In order to be better equipped to cope with increasing

complexity, change and diversity in professional education and performance assessment, administrators and educators will engage in crucial systems thinking. The main question discussed by the book is how the required competence in the performance of students can be assessed during their professional education at both undergraduate and graduate levels. To answer this question, the book identifies unresolved issues and clarifies conceptual elements for performance assessment. It reviews the development of constructs that cross disciplines and professions such as critical thinking, clinical reasoning, and problem solving. It discusses what it means to instruct and assess students within their own domain of study and across various roles in multiple contexts, but also what it means to instruct and assess students across domains of study in order to judge integration and transfer of learning outcomes. Finally, the book examines what it takes for administrators and educators to develop competence in assessment, such as reliably judging student work in relation to criteria from multiple sources. "... the co-editors of this volume, Marcia Mentkowski and Paul F. Wimmers, are associated with two institutions whose characters are so intimately associated with the insight that assessment must be integrated with curriculum and instructional program if it is to become a powerful influence on the educational process ..." Lee Shulman, Stanford University
