Internal Medicine Medical Student USMLE Parts II and III: Pearls of Wisdom is designed to: Help students prepare for the USMLE Board Parts II and III Improve performance on IM rotations

The articles in this collection were all selected from the first five volumes of the Journal of Dialectics of Nature published by the Chinese Academy of Sciences between 1979 and 1985. The Journal was established in 1979 as a comprehensive theoretical publication concerning the history, philosophy and sociology of the natural sciences. It began publication as a response to China's reform, particularly the policy of opening to the outside world. Chinese scholars began to undertake distinctive, original research in these fields. This collection provides a cross-section of their efforts during the initial phase. To enable western scholars to understand the historical process of this change in Chinese academics, Yu Guangyuan's 'On the Emancipation of the Mind' and Xu Liangying's 'Essay on the Role of Science and Democracy in Society' have been included in this collection. Three of the papers included on the philosophy of science are discussions of philosophical issues in cosmology and biology by scientists themselves. The remaining four are written by philosophers of science and discuss information and cognition, homeostasis and Chinese traditional medicine, the I Ching (Yi Jing) and mathematics, etc. Papers have been selected on the history of both classical and modern science and technology, the most distinctive of which are macro-comparisons of the development of science in China and the west. Some papers discuss the issue of the demarcation of periods in the history of science, the history of ancient Chinese mathematics, astronomy, metallurgy, machinery, medicine, etc. Others discuss the history of modern physics and biology, the history of historiography of science in China and the history of regional development of Chinese science and technology. Also included are biographies of three post-eighteenth-century Chinese scholars, Li Shanlan (1811-1882), Hua Hengfang (1833-1902), and Cai Yuanpei (1868-1940), who contributed greatly to the introduction of western science and scholarship to China. In addition, three short papers have been included introducing the interactions between Chinese scholars and three great western scientists, Niels Bohr, Norbert Wiener, and Robert A. Millikan.

If you suffer from asthma, or have a friend or relative who does, this book offers help. the only book to provide the doctor's and patient's view, 100 Questions and amp; Answers About Asthma gives you authoritative, practical answers to your questions about treatment options, coping strategies -- for both patient and family, sources of support, and much more. All major internal medicine diseases and disorders are covered in this new succinct evidence-based guide to treatment and diagnosis in internal medicine. Organized by body system, and focused on critical cor

This book covers the breadth of feline diagnosis and management in the textbook-in-question-and-answer format of The Secrets Series®. After years of being treated under the basic medical model of the canine, feline medicine has reached greater prominence in the past few years, and has become a hot topic in veterinary medicine, yielding several successful books. Michael Lappin is one of the major names in modern feline medicine, and he has assembled a cast of contributors featuring many of the major feline authorities in the U.S. Each chapter presents a brief overview of, discusses the diagnostic plan, and then focuses on the key concepts for each topic.

Importance of study are exciting and rapidly advancing fields of medical science. Our understanding of General Medicine has increased considerably over the last few decades. Furthermore, there is such an overwhelming body of knowledge that it is generally difficult to discern what is important to know in the General Medicine. We have put together this book in order to assist the readers in the learning process. This book may be useful for medical students, ophthalmology residents, practicing ophthalmologists, nurses, internal medicine and those who would like to practice on sample questions in General Medicine. Our past experiences in International Council of Ophthalmology (ICO) exams as well as in MRCS/FRCS examinations reveal that General Medicine are always very difficult for exam candidates. Hence, our attempt to bring together a comprehensive question bank in order to assist those candidates. We have introduced a new format which is putting the answers below the questions therefore the readers can find the answers more easily. Correct answers had been mentioned in bold as well as in detail explanation in order to assist the readers to find a more comprehensive review. We hope that this approach makes the book more user-friendly. First section of the Basic and Clinical Science Course (BCSC) book series by American Academy of Ophthalmology (AAO) was used as the main reference. As the educational requirements have grown, learning processes have changed. Each year, an increasing number of our colleagues with limited time are required to obtain credential from the board in national and international examinations. We strongly recommend that candidates review this book following their study of the basic and clinical textbooks.

This book will appeal to candidates appearing for Final MB examinations in the UK and international students preparing for finals; but also has utility for allied healthcare professionals who will be examined in general internal medicine. It contains 320 questions, which have been divided into 11 commonly tested areas of medicine, surgery and sub-specialties, thus allowing for practice by specialty or by random selection. The answers give a detailed explanation of the single best answer, and as well as directly answering the question, there is information about other aspects of each possible answer to allow the reader to broaden their exam preparation.
