This is an invaluable, applied "how to" guide to understanding the unique characteristics of the international business environment that provides critical information to all managers considering entering an overseas market.

Crises and scandals in the world of international management have brought a new spotlight onto how the subject is taught, studied and understood. There has been a plethora of literature on international management, but a lack of focus on how international management education (IME) can be shaped to respond to existing and future global business challenges. The Routledge Companion to International Management Education gathers together contributors from academia, industry and university administration involved in IME, to: introduce the domain of IME; describe the emerging state in new geographical areas; discuss the major issues and debates revolving around IME; explore the linkage of technology and international management, and shed light on the future of IME. The diverse background of the contributors provides a global perspective that challenges the dominant Anglo-American view, with up-to-date specific insights originating from their indigenous view points, which has often been neglected and inadequately covered. The volume answers important questions, such as: Do we need a vision in IME? What is the current state of IME? How has IME grown in emerging market segments? What roles does technology play in its recent development? The volume provides thought-provoking reading for educators, administrators, policy makers, human resources professionals and researchers. It will also give future international management students a glimpse of IME from a global inside-out perspective.

academic libraries affiliated with colleges of business.' - Kay M. Stebbins, Choice This project is distinctive in that it really is a 'Who's Who' rather than a directory of all scholars engaged in international business education and research. In accomplishing the U.S. and the Reverse Perspective approaches, the authors interview business executives and politicians from a number of countries, i.e. the U.S., Canada, Mexico, Brazil, Colombia, Argentina, India, Hong Kong, Taiwan, China, Japan, South Korea, Germany, Italy, Russia, etc. The interviews are incorporated at appropriate points in the text as first-hand information providing a multinational flavor to IB from each country's representatives. The book focuses on the cultural aspect of the author's published PhD thesis entitled "The Role of Multinational Companies in the Middle East: The Case of Saudi Arabia", which he has carried out at the University of Westminster. It explores the success of multinational enterprises doing business in Saudi Arabia vis-à-vis their cultural awareness and responsiveness. The empirical findings discussed in this book reveal that international business success in a strange cultural environment depends partly on the ability of multinational managers to understand the local culture. The cultural subject in this book pertains to Islam in its entirety. The findings may seem strange to many readers who are not familiar with Islamic culture, in its purest form. Many newcomers to Saudi Arabia --

especially non-Muslim foreign investors, businessmen and workers -- often find many things "strange" about the Kingdom, its people and cultural values. Some feel it odd that many Muslims give more importance to prayer than business. Some are disappointed when they find commercial establishments like shopping centres closed as Muslim workers go to the mosques to attend to their daily prayers. Business visitors find strange the fact that in the midst of their meetings with their Saudi or Muslim counterparts, the latter excuse themselves for prayer. They have these "strange" feelings due to their lack of understanding of true Islamic culture. The cultural aspect of this book will help businessmen and concerned institutions worldwide gain understanding of Islam and reconcile their cultural differences with the Muslim world. Through this book, international companies will be able to have a better understanding of authentic Islamic culture, which will help them gain greater competitive advantages in the Saudi marketplace.

and trends which varied by country and across industry groups; moreover, they added analytical depth when interpreted along with market shares and sales mode. To test the hypothesis that a multinational company's financial performance in foreign business environment is linearly related to the host country's political conditions. Twelve political uncertainties indicators (independent variable) in thirteen host countries were chosen to test for linear relationship with the level of financial performance index (dependent variables). Five equations were formulated to predict the Financial Performance Indices of the four selected industries and the country composite. A step-wise method of multiple regression analysis was employed to measure and determine a predication equation with most favorable financial performance in thirteen host countries of four major industries, i.e., automobile, pharmaceuticals, electric and electronic equipments, and banking. The combination of political risk indicators in the host country can explain the variations of the country composite FPI and the FPI across four selected industries. Results of multiple regression analysis support the hypothesis, enabling prediction of the FPI as well as analysis of the differential importance of the political risk indicators. A model of international business operations was fully developed to be applied as a conceptual framework for further research and practical applications in the field of international business operations.
