International transactions among nations and multinational corporations are important and growing due to the openness of economies all over the world. In this follow-up title to Exchange Rates and International Financial Economics, Kallianiotis examines the role of the exchange rate and trade policy in improving the trade account. He discusses the international parity conditions extensively, together with the most popular theory in international finance, the interest rate parity (IRP) theory.

International Financial Transactions and Exchange Rates describes these theories and gives practical solutions for multinational businesses, individuals, and nations. The increasing internationalization of businesses, openness of economies, integration of nations, change in the exchange rate system, and lastly, the deregulation of the financial market and institutions around the world have made the study of international finance necessary for all business students and professionals.

The book is fundamentally designed to serve as an introduction to the study of Multinational Financial Management for students and managers with little previous exposure to the details of this area. The book provides an overview of the financial environment in which multinational firms operate. It also provides a thorough discussion on the Balance of payments and international financial institutions and financial markets. It also discusses the organization and operations of the foreign exchange.

The International Encyclopedia of Hospitality Management is the definitive reference work for any individual studying or working in the hospitality industry. There are 185 Hospitality Management degrees in the UK alone. This new edition updates and significantly revises twenty five per cent of the entries and has an additional twenty new entries. New online material makes it the most up-to-date and accessible hospitality management encyclopedia on the market. It covers all of the relevant issues in the field of hospitality management from a sectoral level (lodging, restaurants/food service, time-share, clubs and events) as well as a functional one (accounting and finance, marketing, strategic management, human resources, information technology and facilities management). Its unique, user-friendly structure enables readers to find exactly the information they require at a glance – whether they require broad detail that takes a more cross-sectional view across each subject field or more focused information that looks closely at specific topics and issues within the hospitality industry today.

This book is about financial accounting and management control and how these two information systems are related as well as how their objectives conflict. At the most fundamental level, the objective of financial accounting is to provide owners and funders with comparable information on a company's value creation. The aim of management control, on the other hand, is to give the board, senior executives and employees unique information for strategy formulation and implementation. One often-mentioned negative effect is the risk of financial accounting affecting management control design and use, making it less relevant for decision-making at the company level. The book provides an analysis of the complex relationship between financial accounting and management control. The analysis is based on theoretical reasoning as well as several examples of how financial accounting standards affect not only the annual report but also the control system. An interesting, and perhaps unexpected conclusion is that management control seems to affect financial accounting almost as much as financial accounting affects management control. These complex relationships, which can influence the design and use of both financial accounting and management control, are discussed in detail in this book.
