Cryptocurrencies and digital money are all the rage these days, with news stories and lengthy online discussions highlighting their successes, trends, and their potential to grow even bigger in the foreseeable future. It is highly likely you have already heard or read quite a bit about cryptocurrencies, and your curiosity has been aroused enough for you to try and learn more about this trend in investing. And becoming a millionaire investor of cryptocurrencies is not some click bait headline. It is a real possibility for those who become committed to learning all about cryptocurrencies and how to trade and invest them properly for the most profitable outcomes. Let me give you an example using one of my personal favorite cryptocurrencies, Litecoin. On March 20, 2017, 1 Litecoin was worth exactly \$3.96. Just a mere 5 and 1/2 months later in September, Litecoin was worth \$81.78. That is a 1,965% increase in less than 6 months. And it's not like this huge jump came completely out of the blue. Many skilled investors who were involved with and studied cryptocurrencies saw this coming, and everyone who did benefited massively from it. A realistic and relatively small investment of \$5,000 back in March of 2017, would be worth nearly \$100,000 just 6 months later. This is the kind of potential we are dealing with when investing in cryptocurrencies. This is not what you should expect once you begin investing, but it is a possibility. You should also be focused on the long term instead of trying to get rich quick as that very rarely works out the way you want it to. In this book, we will cover the ins and outs of getting started as a cryptocurrency investor and how you can set up a balanced investment portfolio that can financially set you up very well for the future. Here is a preview of some of the things that you will learn about in this book: How to Get Started with Bitcoin Other Big Cryptocurrencies to Invest in Becoming a Millionaire with Cryptocurrency Benefits of Investing for the Long Term Analyzing Trends in Cryptocurrency If any of this sounds interesting to you, then you should definitely give this book on Investing in Cryptocurrencies a read! You'll be happy you did.

With most traditional forms of investing, 10 percent is considered an excellent long term yearly return on investment. If you are dealing with cryptocurrency, however, you can see this same level of movement in just a few days. A change of five percent per day is average for more established cryptocurrencies and 15 percent is frequently seen when it comes to smaller ones. Then there are outliers like Bitcoin which saw more than \$10,000 worth of growth in 2017. Think of that, you can attain a year's worth of investment return in just one day with cryptocurrency investing. If you bought just one coin of Bitcoin, you could have made \$10,000 this year. Competition, the drive for efficiency, and continuous improvement ultimately push businesses toward automation and later towards autonomy. If a business can operate without human intervention, it will minimize its operational cost. If Uber can remove the expense of a driver with an autonomous vehicle, it will provide its service cheaper than a competitor who can't. If an artificially intelligent trading company can search, find,

and take advantage of some arbitrage opportunity, then it can profit where its competitors cannot. A business that can analyze and execute in real-time without needing to wait for a human to act, is a business that will be able to take advantage of brief inefficiencies from other markets or businesses. This trend following a thesis that is based on 100 years of proven economic theory. Short-wave economic cycles, those 5- to 10-year cycles, are driven by credit but the long-wave economic cycles, those 50- to 60-year cycles, are driven by technological revolution. We've had 5 cycles over the past 200 years with the last wave, the Age of Information & Telecommunications. We've seen evidence that a new cycle has begun. Technological revolutions come by way of a cluster of new innovations. About a decade ago, you started to see AI, robotics and IoT (sensors) delivering on automation. That's been powerful, but not transformational. It does not force businesses to fundamentally change how they do business. The last piece of the puzzle was cryptocurrency because it allows us to process and transfer economic value without human intervention. Soon, there will be a global race to build autonomous operations. Businesses and organizations without autonomous operations simply will not be able to compete with those that do because ... autonomy is the ultimate competitive advantage. Crypto is the mechanism that will accrue value from being the infrastructure for the next digital financial revolution. Crypto Asset Investing lays out a case that we've begun a new technological revolution similar to the Internet Age of the 1990's. Artificial intelligence, the Internet of Things, robotics and cryptocurrency are converging to deliver on a new age, what I call the Age of Autonomy. Understanding the transformation that's taken place before anyone else can yield enormous investment opportunity. In this book, you'll learn how and why to invest in crypto assets.
