Used extensively by professionals, organizations, and schools across the country, INVESTMENT ANALYSIS AND PORTFOLIO MANAGEMENT, Tenth Edition, combines solid theory with practical application in order to help students learn how to manage their money so that they can maximize their earning potential. Filled with real-world illustrations and hands-on applications, this text takes a rigorous, empirical approach to teaching students about topics such as investment instruments, capital markets, behavioral finance, hedge funds, and international investing. It also emphasizes how investment practice and theory are influenced by globalization. In addition, this tenth edition includes new coverage of relevant topics such as the impact of the 2008 financial market crisis, changes in rating agencies and government agencies such as Fannie Mae and Freddie Mac, global assets risk-adjusted performance and intercorrelations, and more. This textbook is designed as a core text for finance courses that cover market investments, portfolio formation, and the management of investment portfolios. As such, the text seeks to convey insight and actual wisdom as to the nature of these activities. When combined with a commitment to thinking independently, the text offers the student a rigorous preparation for entry to the funds management industry. The text is presented in three parts. In Part A, the text introduces the fundamental techniques of investment analysis: a "bottom-up" and "top-down" analysis of the firm aimed at an evaluation of the underlying share as a "buy", "hold", or a "sell" recommendation. Part B offers the reader an intuitive grasp of the nature of investment growth, both across time and across assets. Part C introduces the reader to the technicalities of portfolio construction and portfolio management. The text concludes with an assessment of the funds management industry. The text builds in step-by-step stages with Illustrative Examples that consolidate the student's progress and understanding through each chapter. Each of parts A, B, and C (above) has sufficient material to justify a separate course. If the student has exposure to a more foundational course in finance, Parts A and B can be covered as a single course. If from other courses, the student is familiar with the essence of Parts A and B and with statistical concepts, the text can be covered as a single course. The text can therefore be presented readily at either an undergraduate or postgraduate level at a pace appropriate to the student's prior exposure to the concepts.
