There is a growing need to support undergraduate educators in the development of environmental management educational materials. Recognizing this need, the National Science Foundation funded a College Faculty Workshop on Environmental Management, that was conducted at Utah State University in July and August 1996. The principle objectives of the seminar were (1) to provide a meaningful course which would generate new ideas and innovative educational approaches in the emerging field of environmental management, and (2) to develop an applications-oriented problem workbook which would support

undergraduate faculty involvement in the production of course materials. The result of this effort is Environmental Management: Problems and Solutions, an informative text on the essentials of environmental management. More than 200 structured problems presented in the book are meant to elicit a sound understanding of the basics of environmental monitoring, assessment and control. Detailed solutions to each problem, provided with each chapter, will prove useful to both the student and the instructor. This innovative text is a valuable resource for anyone involved in training of engineers and scientists in the field of environmental engineering. The ISO 14000 EMS Audit Handbook is an innovative and cost-effective approach for the Environmental Management System (EMS) audit to ISO 14001. The Handbook presents comprehensive strategies for conducting all phases of the EMS audit, including effective assessment processes for determining improved environmental performance, commitment to prevention of pollution, and continuous improvement. The audit concepts, techniques, and methodologies presented meet and exceed the requirements set forth by national and international accreditation bodies for the training and certification of EMS auditors and lead auditors.

This project was developed with two primary objectives: (1) to identify potential benefits to drinking water utilities from an environmental management system (EMS) and (2) to define steps necessary to develop a water utility sector-specific EMS model from which utilities could create their own EMS. This report reflects both the initial research into alternative EMS models and a "best practices" guidance based on the ISO 14001 framework. With the input of leading private and public water utilities, this document was developed to assist water utilities interested in developing an EMS that will support and ensure continual improvement, increase thoroughness in compliance efforts, and demonstrate environmental excellence. Includes CD with Appendices.

Green Profits covers two tightly connected topics, environmental management systems (EMS) and pollution prevention (P2), in a single volume. Authored by an environmental engineer and an economist/planner, Green Profits shows how to implement an EMS, especially ISO 14001, so that it leads to profitable pollution prevention innovations, and how to identify and implement pollution prevention measures in a sound strategic business framework. Green Profits provides the knowledge and tools for enterprise managers to achieve the benefits of both EMS and P2, and to do so in ways that fit in with existing management systems in their enterprises. Environmental management systems are planned and organized ways for an enterprise to manage its interactions with the environment, in particular those interactions that consume resources, degrade the environment, and create human health risk. Part I of Green Profits provides a thorough and

practical understanding of the elements of EMSs in general and ISO 14001 in particular, tools and techniques for implementing an EMS and achieving ISO 14001 certification, and help with getting the implementation process started. Pollution prevention involves replacing process technologies that generate pollution with those that do not or that do so much less. It focuses on improving production processes to minimize waste rather than treating effluents or emissions, which add to costs. Part II of Green Profits provides tools such as step-by-step guides to conducting a P2 audit and energy and material balances for identifying P2 opportunities in an enterprise; examples of P2 practices in specific industry sectors; and a set of tools for assessing potential P2 investments from a bottom-line point of view.
