Meg Lowman was determined to investigate the marvelous, undiscovered world of the rainforest treetops. Meg's perseverance and creativity allowed her to achieve this goal, but when this fantastic ecosystem started to disappear, Meg needed to act quickly. Meg Lowman was always fascinated by the natural world above her head. The colors, the branches, and, most of all, the leaves and mysterious organisms living there. As a scientist, Meg set out to climb up and investigate the rain forest tree canopies-- and to be the first scientist to do so. But she encountered challenge after challenge. Male teachers would not let her into their classrooms, the high canopy was difficult to get to, and worst of all, people were logging and clearing the forests. Meg never gave up or gave in. She studied, invented, and persevered, not only creating a future for herself as a scientist, but making sure that the rainforests had a future as well. Working closely with Meg Lowman, author Heather Lang and artist Jana Christy beautifully capture Meg's world in the treetops.

In 1945, three young brothers joined and eventually led Brazil's first government-sponsored expedition into its Amazonian rainforests. After more expeditions into unknown terrain, they became South America's most famous explorers, spending the rest of their lives with the resilient tribal communities they found there. People of the Rainforest recounts the Villas Boas brothers' four thrilling and dangerous 'first contacts' with isolated indigenous people, and their

lifelong mission to learn about their societies and, above all, help them adapt to modern Brazil without losing their cultural heritage, identity and pride. Author and explorer John Hemming vividly traces the unique adventures of these extraordinary brothers, who used their fame to change attitudes to native peoples and to help protect the world's surviving tropical rainforests, under threat again today. Euclid in the Rainforest combines the literary with the mathematical to explore logic--the one indispensable tool in man's quest to understand the world. Mazur argues that logical reasoning is not purely robotic. At its most basic level, it is a creative process guided by our intuitions and beliefs about the world.

“Perhaps the finest and most profound account of ethnographic fieldwork and discovery that has ever entered the anthropological literature.” —The Wall Street Journal “If you want to experience a profoundly different culture without the exhausting travel (to say nothing of the cost), this is an excellent choice.” —The Washington Post As a young anthropologist, Don Kulick went to the tiny village of Gapun in New Guinea to document the death of the native language, Tayap. He arrived knowing that you can't study a language without understanding the daily lives of the people who speak it: how they talk to their children, how they argue, how they gossip, how they joke. Over the course of thirty years, he returned again and again to document Tayap before it disappeared entirely, and he found himself inexorably drawn into their world, and implicated in their destiny. Kulick wanted to tell the story of

Gapuners—one that went beyond the particulars and uses of their language—that took full stock of their vanishing culture. This book takes us inside the village as he came to know it, revealing what it is like to live in a difficult-to-get-to village of two hundred people, carved out like a cleft in the middle of a tropical rainforest. But *A Death in the Rainforest* is also an illuminating look at the impact of Western culture on the farthest reaches of the globe and the story of why this anthropologist realized finally that he had to give up his study of this language and this village. An engaging, deeply perceptive, and brilliant interrogation of what it means to study a culture, *A Death in the Rainforest* takes readers into a world that endures in the face of massive changes, one that is on the verge of disappearing forever.

In this third installment in the Lost series, a teenager is the sole survivor of a plane crash that leaves her stranded deep in the dangerous Peruvian jungle. What will it take to make it out alive?

In 1984 Swiss shepherd Bruno Manser trekked through the virgin rainforests of Borneo to live among the jungle's last nomads. In six years among the Penan people, Manser witnessed the wholesale destruction of one of the world's most diverse ecosystems through rapid deforestation. He swore to do everything he could to stop it. Manser's globetrotting campaign brought the world's attention to tropical deforestation. It also made him an enemy of Asia's timber barons. In 2000 he disappeared without a trace. Ruedi Suter's engrossing biography - the first in English - charts Manser's extraordinary journey from a young man who sought to escape civilization for the peace of the jungle to a campaigner who would stand up to oligarchs, lead protests around the globe, and, ultimately, give his life for the forests that he loved.

"A powerful story of self-discovery, survival in the wild." —Los Angeles Times

Four travelers meet in Bolivia and set off into the heart of the Amazon rainforest, but what begins as a dream adventure quickly deteriorates into a dangerous nightmare, and after weeks of wandering in the dense undergrowth, the four backpackers split up into two groups. But when a terrible rafting accident separates him from

Since the late 1960s the Indonesian state of East Kalimantan has witnessed a marked increase in the impact of human activities chiefly commercial logging and agricultural exploitation. Located on the island of Borneo, East Kalimantan also was subjected to prolonged droughts and extensive wildfires in 1982-83 and 1997-98 that were linked to the El Nino-Southern Oscillation (ENSO) phenomenon. The changes in the rainforest ecosystem in East Kalimantan during this 15-year cycle of severe ENSO events are the subject of this book. With an eye toward development of rehabilitation techniques for sustainable forest management, the authors examine possible interactive effects of drought, fire, and human impacts on the flora and fauna of the area.

of the amazing animals that live there, learn about the enormous variety of life-giving plants, and discover why the Amazon rainforest is known as the 'lungs' of our Earth. In this beautiful ebook, Charlotte Milner continues to highlight the important ecological issues faced by our planet, following on from *The Bee Book*, *The Sea Book*, and *The Bat Book*. Did you know that over half of our planet's wildlife live in the rainforest? And that at least two meters of rain falls in the rainforest every year? The world's rainforests are packed with amazing animals and plants, from the deadly poison dart frog, to the stinky rafflesia flower--there is plenty to discover! As our planet's climate crisis becomes even more critical, with forest fires raging in the Amazon, *The Rainforest Book* is the perfect way to introduce little nature-lovers to this enchanting yet threatened world. This celebration of the rainforest shows children just how important it is, and reminds them that it is up to us to care for our planet and its wildlife.

Rainforests have long been recognized as hotspots of biodiversity--but they are crucial for our planet in other surprising ways. Not only do these fascinating ecosystems thrive in rainy regions, they create rain themselves, and this moisture is spread around the globe. Rainforests across the world have a powerful and concrete impact, reaching as far as America's Great Plains and central Europe. In *Rainforest: Dispatches from Earth's Most Vital Frontlines*, a prominent conservationist provides a comprehensive view of the crucial roles rainforests serve, the state of the world's rainforests today, and the inspirational efforts underway

to save them. In Rainforest, Tony Juniper draws upon decades of work in rainforest conservation. He brings readers along on his journeys, from the thriving forests of Costa Rica to Indonesia, where palm oil plantations have supplanted much of the former rainforest. Despite many ominous trends, Juniper sees hope for rainforests and those who rely upon them, thanks to developments like new international agreements, corporate deforestation policies, and movements from local and Indigenous communities. As climate change intensifies, we have already begun to see the effects of rainforest destruction on the planet at large. Rainforest provides a detailed and wide-ranging look at the health and future of these vital ecosystems. Throughout this evocative book, Juniper argues that in saving rainforests, we save ourselves, too. This is the first book to examine how tropical rain forest ecology is altered by climate change, rather than simply seeing how plant communities were altered. The book's goal is to provide a current overview of the impacts of climate change on tropical forests. It aims to investigate past, present, and future climatic influences on the ecosystems with the highest biodiversity on the planet. Vansina's scope is breathtaking: he reconstructs the history of the forest lands that cover all or part of southern Cameroon, Gabon, Equatorial Guinea, the Congo, Zaire, the Central African Republic, and Cabinda in Angola, discussing the original settlement of the forest by the western Bantu; the periods of expansion and innovation in agriculture; the development of metallurgy; the rise and fall of political forms and of power; the coming of Atlantic trade and colonialism; and the conquest of the rainforests by colonial powers and the destruction of a way of life. "In 400 elegantly brilliant pages Vansina lays out five millennia of history for nearly 200 distinguishable regions of the forest of equatorial Africa around a new, subtly paradoxical interpretation of 'tradition.'" —Joseph Miller, University of Virginia "Vansina gives extended coverage . . . to the broad features of culture and the major lines of historical development across the region between 3000 B.C. and A.D. 1000. It is truly an outstanding effort, readable, subtle, and integrative in its interpretations, and comprehensive in scope. . . . It is a seminal study . . . but it is also a substantive history that will long retain its usefulness."—Christopher Ehret, *American Historical Review*

This volume contains 53 of the papers presented at the Conference on Tropical Rainforest Research - Current Issues, which was held in Brunei Darussalam in April 1993.

The book provides an overview of current knowledge, particularly with respect to south-east Asia, and is divided into three sections - Biodiversity, Forest Dynamics and Socioeconomics. The Biodiversity section emphasises the vast range of life forms in tropical forests and considers the theory and practice of estimating species richness and spatial distribution, while contributions on Forest Dynamics provide a

better understanding of the maintenance of this species richness. With an improved background of ideas on rainforest dynamics and biodiversity, better management and conservation strategies are possible, and some of these are explored in the papers on Socioeconomics. The need to demonstrate the total worth of tropical forests to ensure their conservation is taken up by a number of contributors.

This book is filled with photos of rainforest animals and wildlife! It seems like the more we learn about the Amazon, the more questions many of us have and although hundreds of biologists work in the Amazon jungle to try and unravel the secrets of this complex forest and the wildlife that lives there, there is still much to be answered. This book attempts to answer many of the commonly asked questions about this incredible rainforest as well as other not so common questions about rainforest animals and wildlife. Although we came up with some of these questions on our own, most come from requests for questions. We asked hundreds of people to send us the most intriguing questions they could think of concerning the Amazon rainforest and were treated to more than a hundred very interesting questions about this vast jungle. Just about every question was a good one and merited an answer. To find the most accurate answers as possible, many hours were spent researching information to provide honest, clear information that reflects current knowledge of the Amazon rainforest.

The biologist colorfully relates his experiences in the rainforest with various plant and animal species and his conservation battles with members of the human species.
