

between firms, starting with a novel treatment of the Bertrand-Cournot interdependent pricing problem. He studies how capacity constraints, repeated interaction, product positioning, advertising, and asymmetric information affect competition or tacit collusion. He then develops topics having to do with long term competition, including barriers to entry, contestability, exit, and research and development. He concludes with a "game theory user's manual" and a section of review exercises. Important Notice: The digital edition of this book is missing some of the images found in the physical edition.

"When Jean Tirole won the 2014 Nobel Prize in Economics, he suddenly found himself being stopped in the street by complete strangers and asked to comment on issues of the day, no matter how distant from his own areas of research. His transformation from academic economist to public intellectual prompted him to reflect further on the role economists and their discipline play in society. The result is *Economics for the Common Good*, a passionate manifesto for a world in which economics, far from being a 'dismal science,' is a positive force for the common good. Economists are rewarded for writing technical papers in scholarly journals, not joining in public debates. But Tirole says we urgently need economists to engage with the many challenges facing society, helping to identify our key objectives and the tools needed to meet them. To show how economics can help us realize the common good, Tirole shares his insights on a broad array of questions affecting our everyday lives and the future of our society, including global warming, unemployment, the post-2008 global financial order, the euro crisis, the digital revolution, innovation, and the proper balance between the free market and regulation. Providing a rich account of how economics can benefit everyone, *Economics for the Common Good* sets a new agenda for the role of economics in society"--Provided by publisher.

Based on their work in the application of principal-agent theory to questions of regulation, Laffont and Tirole develop a synthetic approach to this field, focusing on the regulation of natural monopolies such as military contractors, utility companies and transportation authorities.

This book gives the reader a unique survey of the most recent advances in economic theory.

Argentina, Brazil, Chile, and Colombia have reformed the ways health insurance and health care are organized and delivered, have extended formal coverage to previously marginalized groups, and have tried to finance this extension fairly. Each has reformed health insurance differently.
