This book addresses two of the most important trends in political economy during the last two decades - globalization and decentralization - in the context of the world's most rapidly growing economic power, China. The intent is to provide a better understanding of how local political and economic institutions shape the ability of Chinese state-owned firms to utilize foreign direct investment (FDI) to remake themselves in the transition from inefficient and technologically backward firms into powerful national champions. In a global economy, the author argues, local governments are increasingly the agents of industrial transformation at the level of the firm. Local institutions are durable over time, and they have important economic consequences. Through an analysis of five Chinese regions, the treatment seeks to specify the opportunities and constraints that alternative institutional structures create, how they change over time, and ultimately, how they prepare Chinese firms for the challenge of global competition.

Chinese production of automobiles rose from 42,000 cars per year in 1990 to 2.3 million in 2004; the number of passenger vehicles on the road doubled every two and a half years through the 1990s and continues to grow. In *China Shifts Gears*, Kelly Sims Gallagher identifies an unprecedented opportunity for China to "shift gears" and avoid the usual problems associated with the automobile industry—including urban air pollution caused by tailpipe emissions, greenhouse gas emissions, and high dependence on oil imports—while spurring economic development. This transformation will only take place if the Chinese government plays a leadership role in building domestic technological capacity and pushing foreign automakers to transfer cleaner and more energy-efficient technologies to China. If every new car sold in China had the cleanest and most energy-efficient of the automotive technologies already available, urban air pollution could be minimized, emissions of climate-altering greenhouse gases would be lower than projected, and the Chinese auto industry would continue to flourish and contribute to China's steady economic development. But so far, Gallagher finds, the opportunity to shift gears has been missed. Gallagher looks in detail at three U.S.-Chinese joint ventures: Beijing Jeep, Shanghai GM, and Chang'An Ford. These case studies are based on original research, including interviews with 90 government officials, industry representatives, and experts in both countries. Drawing from the case studies, Gallagher explores the larger issues of the environmental and economic effects of technology transfer in the automobile industry and the policy implications of "leapfrogging" to more advanced technology.

Inhaltsangabe:Abstract: In times of severe competition, it is of crucial importance to create a competitive advantage to differentiate from the competitors and to sustain the business of the company. This thesis intends to show that a customer-focused quality management is one way to create a sustainable competitive advantage. Quality controls along the whole value chain -before, during and after production- leads to failure free products, which save costs on the one hand and have thus a positive influence on the company's revenue. On the other hand failure free products that meet the customers expectations lead to satisfied customers who build up a brand loyalty and conduct retention sales, which have a positive influence on the company's sales, market share as well as the overall image. Furthermore, this thesis points out that it is important to listen to the voice of the customers and get an insight in the customer's needs and wants. To fulfil or even exceed their expectations leads to customer satisfaction, which is a key to success in today's business world. In addition, the customer demands in regard of quality are growing continuously and new technologies are appearing on the markets on a regular basis. Therefore the producers are forced to keep to the latest technology developments and to get hold on the changing customer needs. But even without this external pressure, quality improvement is justified from a cost point of view. The applicability of a customer-oriented quality management is shown in the practical part of this thesis, when the quality of the Saab models is analyzed from the customer's perspective. Due to the arguments, outlined in this thesis, it can be summarized that a quality management with a focus on the needs of the customers in should become a core strategy of any company producing and selling products in order to create customer satisfaction and sustain the business. This thesis deals with the field of quality management in the context of customer satisfaction. To show the practical applicability of quality management, this thesis is looking at how quality management is conducted in the automotive industry, as we compare the Initial Quality Study (IQS) from the market research institute J. D. Power with a survey that was internally conducted at the Saab Automobile AB. Today's business environment creates a growing need for quality management. Tougher competition leads to the demand for cost savings and higher [...] When General Motors and Chrysler declared bankruptcy in 2009 and immediately targeted thousands of dealerships for closure, tens of thousands of jobs and billions of dollars were on the line. Staring down two of the largest manufacturers in the world - as well as President Obama's Automotive Task Force - a determined triumvirate of car dealers banded together and went to Washington, D.C. to make their voices heard. Alan and Alison Spitzer's fast-paced memoir takes readers behind the scenes as "citizen's lobbyists" traverse throughout all of the major corridors of power in the nation's capital to make their case and bring justice to thousands of small business across the country.

The definitive, fully illustrated celebration of an auto manufacturer that paved its own way by going off-road is now updated to celebrate Jeep's 80th anniversary. Few American vehicles, or vehicles made anywhere else in the world for that matter, are as universally iconic as the Jeep. From olive drab WWII military relics to the beloved Wrangler with its rear-mounted spare tire, open-air design, and telltale roll cage, the Jeep is a true classic. In *Jeep: Eight Decades from Willys to Wrangler*, automotive writer Patrick R. Foster chronicles Jeep vehicle design and production from the beginning of World War II to present. Beginning with the Jeep as a crucial component of the American war fleet, Foster expertly recounts the corporate shifts, financial struggles and successes, close calls, and, above all, the enduring machines that have carried Jeep from the early 1940s to its triumphant role as a modern-day embodiment of American perseverance. More than 200 color and black-and-white historical photos and period advertisements complement his expertly written narrative of Jeep's entire history, now updated to include five years of new model editions and prototypes, its return to the pickup market, and recent stunning marketplace successes. The resulting book reminds us that sometimes the road less traveled was just waiting for the right truck.

The Japanese automotive industry enjoyed spectacular success in the 1980s. This was largely due to the so-called 'Lean Production System' - the combination of an efficient production system, an effective supplier system, and a product development system. In the 1990s the industry fell on hard times because of the Japanese asset price bubble and extreme currency appreciation. In this book, eminent industry specialist Koichi Shimokawa draws on his thirty years of research and fieldwork with Japanese and American firms, to show how the Japanese automotive industry has managed to recover from this difficult period. He shows how firms like

Toyota were able to transfer Japanese systems to overseas plants and how they have changed in order to compete in increasingly globalized markets. In addition, the book also addresses the two major challenges to the current industry model: the rise of China and the environmental and energy supply situation.
