International Financial Management provides a strong foundation for students' first encounter with the subject of international finance. As multinational corporations (MNCs) continue to expand their operations globally they must not only be properly managed to apply their comparative advantages in foreign countries, but must also manage their exposure to many forms and sources of risk. Those MNCs that are most capable of responding to changes in the international financial environment will be rewarded. The same can be said for today's students who become the MNC managers of the future. International Financial Management combines a strong foundation in international finance theory with current, practical applications. It provides thorough, up-to-date treatment of cutting-edge international finance issues along with traditional treatment of international financial management. This book, although it presumes an understanding of basic corporate finance, is renowned for its readability and clear explanation as well as its extensive use of hands-on, real-world applications and student-oriented pedagogy. It is suitable for both final-year undergraduate and master's level courses. The European edition replaces the majority of US examples in the text

The successful evaluation of capital projects requires not only a thorough understanding of traditional techniques of capital budgeting but advanced techniques as well. Riahi-Belkaoui examines the multidimensionality of capital budgeting in its various facets and in ways that executives with no special facility in the subject can follow. He covers replacement decisions, capital rationing, capital budgeting under inflation uncertainty, capital budgeting in a multinational setting with attention to political risks, social project evaluation, and concepts of wealth measurement and distribution. The result is a wide ranging treatment for executive decision makers in finance, banking, investment, and general management, and for their colleagues with similar interests in the academic community. Riahi-Belkaoui begins by examining the

principles underlying the time value of money. In Chapter Two he introduces capital budgeting and in Chapter Three moves to advanced capital budgeting. There he discusses such advanced topics as replacement decisions, capital rationing, and capital budgeting under uncertainty and inflation. In Chapter Four he takes up the same issues associated with capital budgeting but in a global context, and in Chapter Five, the determination of political risk and its use in capital budgeting internationally. Chapter Six compares the techniques of leasing versus purchasing and their reliance on capital budgeting techniques. In Chapter Seven he turns to the techniques of capital budgeting applied to social projects, and ends the book with an examination of the behavior and cognitive implications of wealth measurement and distribution. This is a useful survey and examination of the traditional and advanced techniques of capital budgeting and their applications in domestic and international contexts.

This richly illustrated collection profiles the bold innovators in landscape architecture who, around the turn of the twentieth century, ventured into the nation's heartland to develop a new style of design celebrating the native midwestern landscape. The pioneers of landscape architecture in the Midwest are responsible for creating some of the most recognizable parks, cemeteries, recreation areas, and other public gathering places in the region. *Midwestern Landscape Architecture* includes essays on Adolph Strauch, who introduced a new concept of visually integrated landscape treatment in Cincinnati's Spring Grove Cemetery; William Le Baron Jenney, designer of Chicago's diverse West Parks; and Jens Jensen, who created the American Garden in Union Park in Chicago (a celebration of native flora) and founder of The Clearing, a unique school of the arts and humanities in Wisconsin. Other major figures include Frederick Law Olmsted Sr., co-designer of New York's Central Park, whose work in the Midwest included the layout of the 1893 World's Columbian Exposition, and Ossian Cole Simonds, who helped reconcile the formal approach of the City Beautiful movement with the naturalism of the Prairie School in urban park design. This volume also details the contributions of crusaders for ecological awareness and an appreciation of the region's natural heritage. These include horticultural writer Wilhelm Miller, who spread the ideals of the Prairie style, and Genevieve Gillette, a landscape architect and conservationist whose preservation efforts led to the establishment of numerous Michigan state parks and wilderness areas. *Midwestern Landscape Architecture* fosters a better understanding of how landscape design took shape in the Midwest and how the land itself inspired new solutions to enhance its understated beauty. Despite Olmsted's assessment of the Illinois prairie as "one of the most tiresome landscapes that I ever met with," the Midwest has amassed an important legacy of landscape design that continues to influence how people interact with their environment in the heartland.

Business finance in less developed economies cannot be analyzed or measured by the approaches utilized in countries, such as the United States and Great Britain, where stock markets can assess worth and channel capital with reasonable accuracy. Most economic theory dealing with business finance has been developed in precisely this latter environment. By bringing together economists from less developed countries with researchers from the United States and Western Europe, these essays break new ground by focusing on the unique problems of capital markets in the developing world. The problems of organizing securities markets and such capital market institutions as mutual funds are examined. The sources of financial capital and the interaction of state credit policies and the investment decisions and practices of the private sector are also analyzed. Together these essays provide developmental and business economists with provocative questions and will be of concern to all involved with economic growth in the less developed world.

Covers the international debt market, foreign exchange, financial services, regulation, tax structures, foreign-exchange risk, capital flow, and national stock markets
