The book includes chapters explaining consultancy, on preparing bids, on negotiations and on the importance of assessment and review which are geared towards the needs of those working in public and third sectors, either as or with consultants. "Goodness, Abduction really is good. I'm in awe of Juliet's ability" (Jessica Fellowes, New York Times bestselling author of *The World of Downton Abbey*). England, 1936. A beloved king is dead, and by year's end, the charismatic new monarch will give up his throne for love. The world is on the brink of war. And in the tumultuous intervening months, three outsiders will find themselves embroiled in the hidden truths, undeclared loves, unspoken sympathies, and covert complicities of a glittering high society in the throes of upheaval. After a long journey from her home in Barbados, May Thomas secures a position as a secretary and driver and opens her heart to a man seemingly beyond her reach. Outwardly affable American spinster Evangeline Nettlefold finds her place in the uppermost social circles, but her growing resentment toward her childhood friend Wallis Simpson predicts disaster. A friendship catapults Julian Richardson from his mother's middle-class parlor to luxurious dinners with the king, yet he cannot forget those who struggle outside the gilded gates, nor his uneasy affection for May. As addictive as *Downton Abbey*, as poignant as *The Remains of the Day*, renowned historian Juliet Nicolson's debut novel is a breathtaking story inspired by a love affair that shook the world at a time when order and chaos battled for supremacy.

Innate and adaptive immunity play important roles in immunosurveillance and tumor destruction. However, increasing evidence suggests that tumor-infiltrating immune cells may have a dual function: inhibiting or promoting tumor growth and progression. Although regulatory T (Treg) cells induce immune tolerance by suppressing host immune responses against self- or non self-

antigens, thus playing critical roles in preventing autoimmune diseases, they might inhibit antitumor immunity and promote tumor growth. Recent studies demonstrate that elevated proportions of Treg cells are present in various types of cancers and suppress antitumor immunity. Furthermore, tumor-specific Treg cells can inhibit immune responses only when they are exposed to antigens presented by tumor cells. Therefore, Treg cells at tumor sites have detrimental effects on immunotherapy directed to cancer.
