"The authors reexamine world development - usually the province of economists - as professionals trained in the natural sciences. They show how we have and might use tested scientific and technical procedures and concepts, as well as science itself, to achieve much better results than what has been characteristic of the past. Leclerc and Hall contend that to scholars with a scientific background, the process of development, and the economic logic behind it, often look almost surrealistic. The basic question at the foundation of this review is this: Why should something so important as world development, something capable of absorbing such vast sums of money and of human goodwill, something that impacts the people and the environment so much, continue to be organized and planned using economic techniques and theories that are both unconfirmed experimentally and proven to have led to development failures?"--BOOK JACKET.

The International Place Branding Yearbook 2012: Managing Smart Growth and Sustainability is the third annual volume in the Yearbook series and looks at the case for applying brand and marketing strategies to the economic, social, political and cultural development of cities, towns and regions around the world to help them compete in global, national and local markets. This edition focuses on sustainability, smart growth and place branding. It uses the definition of smart growth as the capability of, first, making appropriate judgments according to the relevant performance measures, which lie in the overlap of three factors: efficiency (doing things right), equity (doing the right things) and effectiveness (doing the right things right); and, second, to configure the variables appropriately i.e., to 'getting it all together' in a balanced-centric manner, a priority for future city branding This volume provides various disciplinary perspectives for mapping ways to lead place branding toward the smart growth paradigm designed to build performance, guided by sustainable values, cultural identity and social inclusive strategies. This Yearbook also underlines the importance of cities not only as the source of around 80 per cent of carbon dioxide emissions, but importantly as ecologically-rejuvenated brands. The International Place Branding Yearbook 2012: • will improve understanding of place branding not only as multi-actor and multi-sector, but increasingly as a multi-layered process; • provides a city typology affording the potential development path for defining brand value propositioning; • interprets the critiques about production and consumption entangled in place brands, including accusations questioning their usefulness and viability.

In this thesis, the US, Swiss, and Syrian models of religious freedom are illustrated in legal settings. The Analytical Representation comprises more than statements of

positive law or mechanical comparison. Each chapter is introduced by thought-forms predominant in the respective legal culture. The objective of the Methodological Representation is to investigate the logic and legitimate pattern by which the US and Swiss judiciary come to the conclusion that an alleged interference is covered under the right to religious freedom. The last dimension, which is the Eclectic Representation, pursues a dual aim. Firstly, the idea is to develop an actual guideline of religious freedom rules, and secondly, to evaluate how much religious freedom is internalized in the US, Swiss, and Syrian legal systems. Building on his earlier important work, Planning Theory (Pergamon URPS 1984, first edition, 1973), this book constitutes a further major advance in planning thought, synthesizing the influence of the British IOR School with the American 'rational planning model'. Going beyond previous 'generic' approaches, the work culminates in a consideration of theory and practice in the planning of all forms of environmental intervention.
