

Leading Managing Occupational Therapy Services An Evidence Based Approach

"This text seeks to address the common functions, responsibilities and duties of occupational therapy leaders and managers. Many of these are in common with those faced by leaders and managers in other healthcare disciplines including nursing, physical therapy, social work, case management and others. The management functions most commonly identified include (a) planning, (b) organizing and staffing, (c) controlling, and (d) directing. There are sometimes variations because some authors may pull the function of "staffing" out from that of organizing and present five rather than four categories. Nonetheless, a discussion of leadership and the basic functions of management and their relationship to leading and managing evidence-based practice is a logical place to begin"--

underlies it. This concise and practical text for students and practitioners bridges the gap between occupational therapy theory and clinical practice, offering highly practical advice on using theory in practice in a wide range of settings. It considers the nature of professional practice and the need for a sound theoretical basis from which to plan, implement and justify interventions, and investigates the practical use of occupational therapy theory and the issues such use raises in health and social care settings from a European perspective. Every occupational therapy student worldwide needs to know about the underlying theory of their profession and its application to practice. The book particularly debates the nature of the theory of occupational therapy via the introduction of the concept of models of the profession as an umbrella for practice, all of which is brought to life via case studies incorporating expert advice, reflection exercises and assessment and evaluation forms.

Synthesizing ideas from minds as diverse as John Dewey and Paulo Freire, the Handbook of Reflection and Reflective Inquiry presents reflective thought in its most vital aspects, not as a fanciful or nostalgic exercise, but as a powerful means of seeing familiar events anew, encouraging critical thinking and crucial insight, teaching and learning. In its opening pages, two seasoned educators, Maxine Greene and Lee Shulman, discuss reflective inquiry

Building on this foundation, the Handbook analyzes through the work of 40 internationally oriented authors: - Definitional issues concerning reflection, what it is and is not; - Worldwide social and moral conditions contributing to the growing interest in reflective inquiry in professional education; - Reflection as promoted across professional educational domains, including K-12 education, teacher education, occupational therapy, and the law; - Methods of facilitating and scaffolding reflective engagement; - Current pedagogical and research practices in reflection; - Approaches to assessing reflective inquiry. While this book is based primarily on experiences of occupational therapy practice education in South Africa, it aims to have international appeal as key principles of practice and service learning are drawn from the differing scenarios covered. Based on qualitative research, some of the book's chapters describe issues faced by students in complex practice situations and highlight educational strategies for promoting socially responsive professional development. They show how students engage with the personal and professional challenges of working in a multicultural society and how situated learning can enhance their resourcefulness in meeting the needs of individuals, groups and communities. The book is divided into three sections: The first, on the practice education agenda, establishes the academic rationale for various forms of practice learning within an occupational therapy curriculum. The second section examines the learning opportunities offered by different practice contexts and highlights mechanisms for developing the professional identity of students. The final section, on enhancing potential,

reviews mechanisms that may be used for supporting students in the field, and ends with a look at the future of practice education and how it might develop in response to social and international drivers.

My aim in writing this book was to provide a guide to management for student occupational therapists and practitioners in the field. It is not intended to provide an answer to every conceivable management situation. The organization and delivery of health and social services is being subjected to relentless scrutiny and change. Hardly has one proposal been

Read Book Leading Managing Occupational Therapy Services An Evidence Based Approach

implemented before another one is introduced. In view of this, the thrust of this book is to highlight key points to be addressed when looking at the delivery of occupational therapy services. For this reason, the book starts from the viewpoint of one who is in the early stages of an occupational therapy career through to the position of having to manage the staff in an occupational therapy department service. Following this plan, the book has been organized into two parts. Part One covers issues that an occupational therapist has to confront directly in any job situation. In this situation, she will need to know what is expected of her. Apart from knowing about the various duties, it is necessary to understand the context in which these duties are to be conducted. Hence, there are chapters that discuss professional responsibilities, self-management, standards of practice, and the structure of the two biggest employers of occupational therapists - the NHS and local authority social services departments.
