Philosophy of religion in the Anglo-American tradition experienced a 'rebirth' following the 1955 publication of *New Essays in Philosophical Theology* (eds. Antony Flew and Alisdair MacIntyre). Fifty years later, this volume of essays offers a sampling of the best work in what is now a very active field, written by some of its most prominent members. A substantial introduction sketches the developments of the last half-century, while also describing the 'ethics of belief' debate in epistemology and showing how it connects to explicitly religious concerns and to the topics of the individual contributions. These topics include: the relationship between God and the natural laws; the metaphysics of bodily resurrection; the role of appeal to 'mystery' in the religious life; the justification of both theistic belief generally and more specific doctrinal beliefs; and the social-political aspects of religious faith and practice.

"Technological advances have led to wide deployment and use of embedded systems in an increasing range of applications, from mobile phones to car, plane and spacecraft and from digital id's to military systems in the field. Many of these applications place significant security requirements and have led to significant research activity in the area of security and embedded

systems, due to the limited resources of conventional embedded systems. This emerging research area is of great importance to a large number of public and private organizations, due to their desire to deploy secure embedded systems in the field. This publication brings together one of the first international efforts to emphasize the importance of this emerging technical field and provides presentations of leading researchers in the field. Its objectives are to present the technologies and open problems of the emerging area of security and embedded systems, to present the latest research results in all aspects of security in embedded systems, and, finally, to provide a roadmap of the technology for the future. Considering the main directions of research in the field, three main areas are discussed: (i) foundations of security and embedded systems, (ii) secure embedded computing systems and (iii) telecommunications and network services."

Brand Equity Planning with Structuralist Rhetorical Semiotics furnishes an innovative conceptual model and methodology for brand equity planning, with view to addressing a crucial gap in the existing marketing and semiotic literatures concerning how advertising multimodal textual elements may be transformed into brand associations, with an emphasis on rhetorical relata as modes of connectivity between a brand's surface and depth grammar. The scope of this project is inter-disciplinary, spanning research areas such as brand equity, structuralist semiotics, textual semiotics, visual and film semiotics, multimodal rhetoric, Film theory, psychoanalysis. The proposed connectionist model of the brand trajectory of signification is operationalized through a methodological framework that encompasses a structuralist semiotic interpretative approach to the textual formation of brand equity, supported by quantitative content analysis with the aid of the software Atlas.ti and the application of multivariate mapping

A non-technical introduction to the question of modeling with time-varying parameters, using the beta coefficient from Financial Economics as the main example. After a brief introduction to this coefficient for those not versed in finance, the book presents a number of rather well known tests for constant coefficients and then performs these tests on data from the Stockholm Exchange. The Kalman filter is then introduced and a simple example is used to demonstrate the power of the filter. The filter is then used to estimate the market model with time-varying betas. The book concludes with further examples of how the Kalman filter may be used in estimation models used in analyzing other aspects of finance. Since both the programs and the data used in the book are available for downloading, the book is especially valuable for students and other researchers interested in learning the art of modeling with time varying coefficients.

Master the skills you need to succeed in the classroom and as a health care professional! Filled with tips and strategies, *Career Development for Health Professionals, 4th Edition* provides the skills required to achieve four important goals: 1) complete your educational program, 2) think like a health care professional, 3) find the right jobs, and 4) attain long-term career success. This edition includes a new chapter on professionalism and online activities challenging you to apply what you've learned. Written by respected educator Lee Haroun, this practical resource helps you maximize your potential and grow into a competent, caring, well-rounded member of the health care team. Self-paced format with interactive exercises, stop-and-think review, and end-of-chapter quizzes allows you to work through the text independently. Conversational, easy-to-read style helps you understand concepts and skills by

delivering information in small, easily absorbed chunks. Chapter objectives and key terms at the beginning of each chapter preview the material to be learned while reading the chapter. UPDATED on-the-job strategies and Success Tips focus on professional certification exams, the use of social media, general job requirements, online classroom learning, employment laws, and necessary skills and National Health Care Skill Standards. Prescriptions for Success and Resume Building Blocks emphasize the importance of a resume and how it is a 'work in progress' from the first day of a student's education. Prescription for Success exercises let you apply what you've learned to on-the-job situations. Useful Spanish Phrases appendix provides a quick reference for translations that will prove valuable in today's workplace. Student resources on the Evolve companion website include activities providing a chance to use critical thinking skills and apply content to health care jobs. NEW Becoming a Professional chapter defines professionalism as it relates to health care occupations, emphasizes its importance, and presents examples of professionals in action. NEW! Full-color photos and illustrations bring concepts and health care skills to life. NEW case studies offer a real-life look into school, job-search, and on-the-job situations. NEW study and job-search strategies explain how to study for classes, job applications, resumes and resume trends, guidelines to preparing different types of resumes (print, scannable, plain text, and e-mail versions), protecting against job scams, online job searching, and preparing for the job interview. NEW reference chart on the inside front cover provides an outline to the book's content, making it easy to find the information you need.

The essays in this book discuss the evolution of the profession of social work in the twentieth century. Its specific focus is the relationship of the professional social worker to the poor.

Attempting to avoid the usual retelling of the standard narrative of the social work profession, *The Professionalization of Poverty* provides a perspective that goes beyond the typical boundaries of liberal/conservative paradigms and suggests that social work incorporate intellectual and methodological elements compatible with both.

The proceedings of ECML/PKDD 2004 are published in two separate, albeit intertwined, volumes: the Proceedings of the 15th European Conference on Machine Learning (LNAI 3201) and the Proceedings of the 8th European Conference on Principles and Practice of Knowledge Discovery in Databases (LNAI 3202). The two conferences were co-located in Pisa, Tuscany, Italy during September 20-24, 2004. It was the fourth time in a row that ECML and PKDD were co-located. After the successful co-locations in Freiburg (2001), Helsinki (2002), and Cavtat-Dubrovnik (2003), it became clear that researchers strongly supported the organization of a major scientific event about machine learning and data mining in Europe. We are happy to provide some statistics about the conferences. 581 different papers were submitted to ECML/PKDD (about a 75% increase over 2003); 280 were submitted to ECML 2004 only, 194 were submitted to PKDD 2004 only, and 107 were submitted to both. Around half of the authors for submitted papers are from outside Europe, which is a clear indicator of the increasing attractiveness of ECML/PKDD. The Program Committee members were deeply involved in what

turned out to be a highly competitive selection process. We assigned each paper to 3 - viewers, deciding on the appropriate PC for papers submitted to both ECML and PKDD. As a result, ECML PC members reviewed 312 papers and PKDD PC members reviewed 269 papers. We accepted for publication regular papers (45 for ECML 2004 and 39 for PKDD 2004) and short papers that were associated with poster presentations (6 for ECML 2004 and 9 for PKDD 2004). The global acceptance rate was 14.5% for regular papers (17% if we include the short papers).

This book constitutes the refereed proceedings of the 7th International Static Analysis Symposium, SAS 2000, held in Santa Barbara, CA, USA, in June/July 2000. The 20 revised full papers presented were carefully reviewed and selected from 52 submissions. Also included are 2 invited full papers. All current aspects of high-performance implementation and verification of programming languages are addressed, in particular object logics, model checking, constraint solving, abstract interpretation, program transformation, rewriting, confidentiality analysis, typed languages, unified analysis, code optimization, termination, code specialization, and guided abstraction.

personality organization, and on the individual's place in culture and society. Extensive discussions on the role of language and other symbolic systems in culture, ethnographic method, and social interaction are also included. Ethnographic and linguistic examples are drawn from Sapir's fieldwork among native North Americans and from European and American society as well. Edward Sapir (1884-1939), one of this century's leading figures in American anthropology and linguistics, planned to publish a major theoretical state - ment on culture and psychology. He developed his ideas in a course of lectures presented at Yale University in the 1930s, which attracted a wide audience from many social science disciplines. Unfortunately, he died before the book he had contracted to publish could be realized. Like de Saussure's *Cours de Linguistique Générale* before it, this work has been reconstructed from student notes, in this case twentytwo sets, as well as from Sapir's manuscript materials. Judith Irvine's meticulous reconstruction makes Sapir's compelling ideas - of surprisingly contemporary resonance - available for the first time.

Academy of Sciences). With 8 keynote talks and over 200 presented papers on graphic communication and packaging technologies, the conference attracted more than 300 scientists. The proceedings cover the recent findings in color science and technology, image processing technology, digital media technology, mechanical engineering and numerical control, materials and detection, digital process management technology in printing and packaging, and other technologies. As such, the book is of interest to university researchers, R&D engineers and graduate students in the field of graphic arts, packaging, color science, image science, material science, computer science, digital media, and network technology.

This timely Handbook is based on the principle that disasters are social constructions and focuses on social science disaster research. It provides an interdisciplinary approach to disasters with theoretical, methodological, and practical applications. Attention is given to conceptual issues dealing with the concept "disaster" and to methodological issues relating to research on disasters. These include Geographic Information Systems as a useful research tool and its implications for future research. This seminal work is the first interdisciplinary collection of disaster research as it stands now while outlining how the field will continue to grow.

Introduction The dramatic increase in available computer storage capacity over the last 10 years has led to the creation of very large databases of scientific and commercial information. The need to analyze these masses of data has led to the evolution of the new field knowledge discovery in databases (KDD) at the intersection of machine learning, statistics and database technology. Being interdisciplinary by nature, the field offers the opportunity to combine the expertise of different fields

into a common objective. Moreover, within each field diverse methods have been developed and justified with respect to different quality criteria. We have to investigate how these methods can contribute to solving the problem of KDD.

Traditionally, KDD was seeking to find global models for the data that - plain most of the instances of the database and describe the general structure of the data. Examples are statistical time series models, cluster models, logic programs with high coverage or classification models like decision trees or linear decision functions. In practice, though, the use of these models often is very limited, because global models tend to find only the obvious patterns in the data, which domain experts already are aware of. What is really of interest to the users are the local patterns that deviate from the already-known background knowledge.

David Hand, who organized a workshop in 2002, proposed the new field of local

important work, this book presents for the first time his unique syntheses of philosophy, psychoanalysis, and critical social theory, directed toward human emancipation and social transformation. Within philosophy, Marcuse engaged with disparate and often conflicting philosophical perspectives - ranging from Heidegger and phenomenology, to Hegel, Marx, and Freud - to create unique philosophical insights, often overlooked in favor of his theoretical and political interventions with the New Left, the subject of previous volumes. This collection assembles significant, and in some cases unknown texts from the Herbert Marcuse archives in Frankfurt, including: critiques of positivism and idealism, Dewey's pragmatism, and the tradition of German philosophy philosophical essays from the 1930s and 1940s that attempt to reconstruct philosophy on a materialist base Marcuse's unique attempts to bring together Freud and philosophy philosophical reflections on death, human aggression, war, and peace Marcuse's later critical philosophical perspectives on science, technology, society, religion, and ecology. A comprehensive introduction by Douglas Kellner, Tyson Lewis and Clayton Pierce places Marcuse's work in the context of his engagement with the main currents of twentieth century politics and philosophy. An Afterword by Andrew Feenberg provides a personal memory of Marcuse as scholar, teacher and activist, and summarizes the lasting relevance of his radical thought.

In the World Library of Educationalists series, international experts themselves compile career-long collections of what they judge to be their finest pieces – extracts from books, key articles, salient research findings, major theoretical and practical contributions – so the world can read them in a single manageable volume. Methodologies forms a chronology through the texts and concepts that span Patti Lather's career. Examining (post)critical, feminist and poststructural theories, Lather's work is organized into thematic sections that span her 35 years of study in this field. These sections include original contributions formed from Lather's feminism and critical theory background. They contain her most cited works on feminist research and pedagogy, and form a collection of both early and recent writings on the post and post-post, with a focus on critical policy studies and the future of post-qualitative work. With a focus on the implications for qualitative inquiry given the call for scientifically based research in education, this compelling overview moves through Lather's progressive thoughts on bridging the gap between quantitative and qualitative research in education and provides a unique commentary on some of the most important issues in higher education over the last 30 years. This compilation of Lather's contribution to educational thinking will prove compelling reading to all those engaged in student learning in higher education worldwide.

The papers are arranged in topical sections on research, review and outlook, participation and democracy, designing government services, legal dimensions in e-government, procurement and governance issues in networked governments, as well as evaluation and assessment. Indices, index funds and ETFs are grossly inaccurate and inefficient and affect more than €120 trillion worth of securities, debts and commodities worldwide. This book analyzes the mathematical/statistical biases, misrepresentations, recursiveness, nonlinear risk and homomorphisms inherent in equity, debt, risk-adjusted, options-based, CDS and commodity indices – and by extension, associated index funds and ETFs. The book characterizes the “Popular-Index Ecosystems,” a phenomenon that provides artificial price-support for financial instruments, and can cause systemic risk, financial instability, earnings management and inflation. The book explains why indices and strategic alliances invalidate Third-Generation Prospect Theory (PT3), related approaches and most theories of Intertemporal Asset Pricing. This book introduces three new decision models, and some new types of indices that are more efficient than existing stock/bond indices. The book explains why the Mean-Variance framework, the Put-Call Parity theorem, ICAPM/CAPM, the Sharpe Ratio, Treynor Ratio, Jensen’s Alpha, the Information Ratio, and DEA-Based Performance Measures are wrong. Leveraged/inverse ETFs and synthetic ETFs are misleading and inaccurate and non-legislative methods that reduce index arbitrage and ETF arbitrage are introduced.

What difference does it make to think about the economy in geographical terms? The SAGE Handbook of Economic Geography illustrates the significance of thinking the 'economy' and the 'economic' geographically. It identifies significant stages in the discipline's development, and focuses on the key themes and ideas that inform present thinking. Organised in sections with multiple chapters, The SAGE Handbook of Economic Geography is a complete overview of the discipline that critically assesses: Location, the quantitative revolution and the 'new economic geography' Geographies of globalization and capitalism Geographies of scale/place and the local/global Geographies of nature, agriculture, sustainable development and the political ecology Geographies of uneven development, economic decline, and money and finance Geographies of consumption and services Geographies of regulation and governance, neo-liberalism and welfare. Placing the discipline in vivid historical and contemporary context, The SAGE Handbook of Economic Geography is a timely, essential work for postgraduates, researchers and academics in economic geography.

This book is an exposition of the theoretical foundations of hyperbolic manifolds. It is intended to be used both as a textbook and as a reference. reader is assumed to have a basic knowledge of algebra and topology at the first-year graduate level of an American university. The book is divided into three parts. The first part, consisting of Chapters 1-7, is concerned with hyperbolic geometry and basic properties of discrete groups of isometries of hyperbolic space. The main results are the existence theorem for discrete reflection groups, the Bieberbach theorems, and Selberg's lemma. The second part, consisting of Chapters 8-12, is devoted to the theory of hyperbolic manifolds. The main results are Mostow's rigidity theorem and the determination of the structure of geometrically finite hyperbolic manifolds. The third part, consisting of Chapter 13, integrates the first two parts in a development of the theory of hyperbolic orbifolds. The main results are the construction of the universal orbifold covering space and Poincaré's fundamental polyhedron theorem.

This book could have been entitled "Analysis and Geometry." The authors are addressing the following issue: Is it possible to perform some harmonic analysis on a set? Harmonic analysis on groups has a long tradition. Here we are given a metric set X with a (positive) Borel measure μ and we would like to construct some algorithms which in the classical setting rely on the Fourier transformation.

Needless to say, the Fourier transformation does not exist on an arbitrary metric set. This endeavor is not a revolution. It is a continuation of a line of research which was initiated a century ago, with two fundamental papers that I would like to discuss briefly. The first paper is the doctoral dissertation of Alfred Haar, which was submitted at to University of Gottingen in July 1907. At that time it was known that the Fourier series expansion of a continuous function may diverge at a given point. Haar wanted to know if this phenomenon happens for every 2 orthonormal basis of $L^2[0,1]$. He answered this question by constructing an orthonormal basis (today known as the Haar basis) with the property that the expansion (in this basis) of any continuous function uniformly converges to that function.

By the time of his death the English economist Lionel Robbins (1898–1984) was celebrated as a 'renaissance man'. He made major contributions to his own academic discipline and applied his skills as an economist not only to practical problems of economic policy – with conspicuous success when he served as head of the economists advising the wartime coalition government of Winston Churchill in 1940–45 – and of higher education – the 'Robbins Report' of 1963 – but also to the administration of the visual and performing arts that he loved deeply. He was devoted to the London School of Economics, from his time as an

The Encyclopedia of Information Science and Technology, Fifth Edition is a three-volume set that includes 136 original and previously unpublished research chapters that present multidisciplinary research and expert insights into new methods and processes for understanding modern technological tools and their applications as well as emerging theories and ethical controversies surrounding the field of information science. Highlighting a wide range of topics such as natural language processing, decision support systems, and electronic government, this book offers strategies for implementing smart devices and analytics into various professional disciplines. The techniques discussed in this publication are ideal for IT professionals, developers, computer scientists, practitioners, managers, policymakers, engineers, data analysts, and programmers seeking to understand the latest developments within this field and who are looking to apply new tools and policies in their practice. Additionally, academicians, researchers, and students in fields that include but are not limited to software engineering, cybersecurity, information technology, media and communications, urban planning, computer science, healthcare, economics, environmental science, data management, and political science will benefit from the extensive knowledge compiled within this publication.

The text is presented in chunks of approximately 10 True/False questions on specific concepts in research methodology and statistics. This is followed by clear explanations, from first principles, that assume no prior knowledge. This book is for the paper critique section of the MRCPsych 2 examination but clinical tutors, organisers of journal clubs and clinicians interested in research will find the book helpful. It is particularly invaluable for clinicians interested in evidence based medicine. This book is intended to be used as an aide memoir, carried in the pocket and referred to as often as necessary. It enables self-assessment to be carried out in the hope that any gaps in knowledge will be identified. Much of this book focuses on practical application of statistical and research methodology concepts into critical paper reading. The reader is encouraged to attempt the questions before the reading the suggested answers.
