Thoroughly revised and updated, *Community Nutrition: Planning Health Promotion and Disease Prevention, Second Edition* provides students with the knowledge, skills, tools, and evidence-based approaches that they need to promote health and prevent diseases. The Second Edition provides pertinent statistics on the national health objectives for 2010 and discusses traditional concepts as well as current and emerging nutrition issues. Real-world examples throughout the text explain nutritional concepts and present the reader with an application of these important topics. Instead of presenting the business and hospital-based care perspective used by most other books in this area, this text focuses on public health and community-based care. The book is divided into three parts: Part 1 provides an overview of community and public health nutrition landscapes, and lays the foundation for primary, secondary, and tertiary prevention. Part II focuses on the knowledge and intervention skills needed to promote health and prevent disease throughout the life cycle. Part III focuses on the skills, knowledge, and tools community nutritionists need to design effective nutrition and health promotion programs. Totally revised and updated, this second edition of the well-received *Physique, Fitness, and Performance* retains the unique integrated approach of its predecessor, examining the relationship of structure to function in human performance. Far surpassing the limited focus of standard exercise and fitness books, it combines the morphological study of physique relative to body structure, body size and body composition with the applied interaction of muscular, cardiovascular, motor, and metabolic system capacities, abilities, and skills developed and acquired through exercise and training programs. Establishing a background and history for the current prevalent interrelationships between physique and physical performance, the book begins by outlining the morphological, physical, motor, and metabolic component areas of study involved in physical training. Part One introduces the study of the structure-function relationships, relating body structure, size, and composition to fitness and physical performance. Part Two and Part Three present an overview of the quantitative and qualitative study of physical and physiological conditioning, motor learning, and motor control, specifically regarding the development of motor skill within general/open loop and specific/closed loop parameter guidelines. It also covers fatigue and its physiological and psychological effects on
