The work has relevance also for pedagogues and linguists. Chapters are included on: using the students' first language experience; English and communication; encouraging students to co-operate rather than compete; an assessment of the vital primary experience; vocabulary and how to teach it; English for real conversation; improving reading skills and the choice of books; writing; grammar and what is meant by knowing the grammar of a language; literature & life, and poetry.

The evidence grows daily that much learning failure results from undetected early childhood hearing problems (Gordon 1977). This is because the child is deprived of the state of acute hearing sensitivity normally present at birth which makes it possible to recognize the loudness levels and duration of each individual sound. This is how a child learns the signifi cance of the slightest variations in the quality of each sound as he collects information from the environment through all his senses, and the meaning of these changes is experienced and understood. As a result of normal sensory experience and reaction with the environment the multisensory systems are used and developed. Similarly, the growth of the brain is stimulated to make possible the storage of infor mation and to produce the biochemical state necessary to transmit and relate the sensory information so collected and stored (Monckeberg and Prescott, 1975). If the loudness level of sound is reduced so too is its impact. In this form a baby's normal 'startle response' to a sound, which includes the flickering open of the eyes, is rarely experienced. This response of the eyes is a seeking out of a sound source. The visual localizing of sound sources, leading to the antiCipation of their spatial position, arises from the ability to hear the fine changes of pitch and loudness levels involved in movement.

Over the past few decades, the book series Linguistische Arbeiten [Linguistic Studies], comprising over 500 volumes, has made a significant contribution to the development of linguistic theory both in Germany and internationally. The series will continue to deliver new impulses for research and maintain the central insight of linguistics that progress can only be made in acquiring new knowledge about human languages both synchronically and diachronically by closely combining empirical and theoretical analyses. To this end, we invite submission of high-quality linguistic studies from all the central areas of general linguistics and the linguistics of individual languages which address topical questions, discuss new data and advance the development of linguistic theory.

"English is an important subject today. It is also a difficult subject to teach. Large heterogeneous classes, anachronistic syllabi, boring textbooks boringly taught and purposeless examinations demotivate students from taking English seriously at college. In the twenty-first century there is a need for professionals to be adept at writing, speaking and understanding English because they have to communicate well with native English-speaking clients. Our graduates need to be trained in these linguistic competencies while in college. Unlock their Future: A Skills-based Approach to Teaching and Learning English offers practical methods and strategies for preparing students from the metros as well as the small towns in English language skills required in their professional lives. The authors sincerely hope that this book will bring freedom to many English-shy students and corporates and make this a standard for teaching of English language.
