

## Long Cases For The Final Frcr 2b Oxford Specialty Training Revision Texts 1st First Edition By Hanlon Rebecca Curtis John Wiesmann Hulya White Davi Published By Oup Oxford 2011

Robert H. Smith (1932-2006) served as Christ Seminary-Seminex Professor of New Testament at Pacific Lutheran Theological Seminary in Berkeley, California. Among his books are *Apocalypse: A Commentary on Revelation in Words and Images* and *Easter Gospels: The Resurrection of Jesus according to the Four Evangelists* as well as commentaries on Acts, Hebrews, and Matthew. Paul M. Fullmer serves as chaplain at Lebanon Valley College. In 1998 he received the Pritchett Greek prize for excellence in Greek and in 2000 he was awarded the American Bible Society Scholarly Achievement Award for outstanding achievement in biblical studies. He is the author of *Resurrection in Mark's Literary-Historical Context* (2006).

CASES postgraduate students have a lot to remember and revise in their final stages of exam preparation and, consequently, during their crucial practical examinations are unable to precisely answer what an examiner expects for a particular case scenario. Recreating the examination hall scenario and simulating what transpires during those few hours between the student and the examiners is the main aim of this book. The 60 long and short cases, along with a chapter on goniometry, form the content of this book. Chapters include many relevant photographs and X-rays which help in understanding the difficult concepts. Each chapter is a condensation of cardinal information required to be presented in the examination. The book will serve as a valuable resource for presenting cases during the routine ward rounds or teaching sessions to both the postgraduates and the faculty. The book will find relevance when the readers understand what exactly the faculty or the examiner expects and learn to highlight crucial clinical findings which will clinch the case for them. This is demonstrated in various sections of the chapters which start with actual case scenarios, describe the core clinical findings, how exactly to articulate the final diagnosis with points in favour, formulate the management, and outline the principles of treatment. A must for every student striving to clear his postgraduate examination in orthopedics with zen and confidence.

Fully revised, second edition bringing trainees and physicians fully up to date with the latest developments and rapidly changing concepts in the field of paediatrics.

The only revision book trainee radiologists need to succeed at the Final FRCR 2B examination. Written by a highly qualified team of authors, with a wealth of clinical experience and exam knowledge, it includes 42 long cases, as presented in the exam, with high quality images and accompanied by detailed answers.

This small-format revision text provides the essential information for medical students taking patient's history, performing clinical examination, and presenting clinical cases effectively at examinations, assessments, and clinical meetings. Unlike many other texts on the subjects, this book is organized by specialties, provides tips on passing the exams, and gives expert guidance on presenting both the long and short case summaries. It is presented in an easy-to-remember format and designed as a revision text, supplementary to the larger and less focused textbooks. Illustrative examples are provided throughout the book, and a different approach complemented by generic case histories is outlined for each medical specialty. Medical students are required to take a history, examine patients, and present their findings to the examiner as part of their Final Examination. Long and short cases form a major part of the students' assessment, and the approaches required vary according to each specialty. The author has great experience in passing exams including the MRCP, DRCOG, MRCPsych, MRCPGP, DCH, DO and PGCE. Based on his success in these exams, he has written a revision aid to help medical students pass the undergraduate exams. The book equips students with different approaches to the specialties, helps them summarise their findings in a logical order, and provides examples of long and short cases for each examined specialty. A "must" for students preparing for their Finals! This small format revision text provides the essential information in all clinical specialty to help students pass the Final MB exam. While there are many texts on clinical examination, this concise text is organised by specialities, provides tips on passing the exam, and gives advice on presenting both the long and short case summaries. It is a practical book which supplements the larger and more illustrated texts, and which also gives clinical illustrations where appropriate. The book brings together all the relevant clinical examination information in one text to aid students prepare and review this large topic comprehensively.

This is a practical revision book for learning techniques to pass clinical examinations in all the major clinical subjects for final examinations. The book covers Medicine, Surgery, Obstetrics and Gynaecology, Paediatrics and Psychiatry. Each section starts with advice on the general aspects of examination of the patients, followed by a series of clinical problems presented in the form of cases. Each case includes a fact file of key points to remember about this condition, and advises on the likely discussion points that can be asked. The book outlines in each clinical problem the likely use of OSCE, short and long case examinations.

In this partnership between so-called equals, which can be compared to a polyandrous marriage, the Supreme Court is the woman and Parliament and the Executive her two husbands, one more loutish than the other, depending on your point of view. In the Nirbhaya case too the gap between theory and law has been highlighted. Following the terrible episode, (and even before) there has been continual and great improvement in the substantive laws for both women as well as children who have been victims of sexual violence. And yet despite their being so much publicity on the case, the author argues that, concretely, although there has been improvement in the laws themselves, we are nowhere near better enforcement or implementation. Even after the institution of a fast track trial, and with the nation's attention focused on it, the Nirbhaya case still dragged on and it took more than nine months for the trial court to reach a verdict. And, as the author explains there are still potentially further delays waiting at the level of the superior courts, the High Court certainly and the Supreme Court too, quite possibly. As the author goes on to show in this well argued book, a woman who is the victim of a sex related crime 'courts injustice' whenever she comes to a court, be she the victim of a rape, an acid attack, of sexual harassment; the mother or father of such a victim or be it even any ordinary person struggling to find justice. Our courts, particularly the Supreme Court is performing the function of a nagging wife. Time and again she pulls up the lazy, good-for-nothing husbands (read 'failure of governance'). And what does either husband do? He goes for a walk, ignoring the wife's anguished screams even as they follow him. If she complains too much, he tells himself, he'll see to it that she doesn't get the silk sari and other goodies she wants (read 'promotions', 'post retirement assignments', etc). It is only one of the ways he ensures that she doesn't step too much out of line. All wives nag, he consoles himself. Nagging here and there is tolerable but she must make sure that he gets his meals on time (read 'doesn't bar him from contesting elections even if there are a dozen or more criminal cases pending against him'). Meanwhile the overzealous

wife doesn't realize that while she rails and rants against the erring ways of her husband, the dishes are piling up in the kitchen. And the maid has gone away for six months and the dishes, they are piling up (read, the arrears are accumulating)! The time has come. It cannot continue to remain 'business as usual'. There will be justice for Nirbhaya. Our 'brave heart' will also bring justice and relief to all her sisters. And possibly, even to the rest of us.

Long Cases for the Final FRCR 2BOxford University Press

This ebook reports on the unprecedented and radical step taken by Warwickshire Social Services Department when, in 1986, it closed the last of its children's homes. This book examines the background to these developments, the reasons for them and their consequences. The findings are set in the context of the crisis of confidence in residential child care that occurred in the early 1990's culminating in the Pindown Report on Staffordshire which revealed an alarming catalogue of inhuman and degrading treatment of children in residential care. This research, undertaken by NCB, reports findings that have major national and international significance. The future role of children's homes is in question and this study examines whether foster care, in particular, is more effective at meeting children's needs than residential care. Young people's own views are included and the work is presented very much in the context of the Children Act 1989.

Presents trainees with detailed clinical cases for numerous diseases and disorders covering various body systems including respiratory, gastroenterology, neurology and haematology. Questions and answers are provided at the end of each case.

This is the first book to cover minimal-invasive treatment of osteoporotic, tumorous and traumatic vertebral fractures in the English language. In addition to detailed descriptions of the techniques, including tips and tricks from experts, the book contains a chapter about the medical treatment of osteoporosis, which is indispensable in the interdisciplinary approach to osteoporosis. This acclaimed innovative concept unites several treatment aspects. More conservative treatment methods are also presented in this work. All chapters reflect new developments and clinical findings in the field of orthopaedics, surgery, traumatology and neurosurgery.

Written for medical students, this book is designed to increase the chances of success in the clinical part of their final examinations. It also features useful tips for preparation of Vivas, OSCEs, OSLEs and the long and short cases, relevant questions to include when taking a history in the long case, and a comprehensive revision index.

Sourcebook on the English Legal System is a key collection of primary legal sources, Committee and Commission reports, explanatory documents and articles. A variety of critical articles and commentaries complement and expand upon these materials. Since the first edition of this book in 1996, the English legal system has undergone major and comprehensive changes. As a result of these profound changes, this second edition has been thoroughly updated to include presentation and analysis of three landmark pieces of legislation: the Access to Justice Act 1999, the Civil Procedure Rules 1998 and the Human Rights Act 1998. Other changes abound: the Auld Committee has undertaken a root and branch review of the criminal justice system. The Crown Prosecution Service has been re-organised, the nature of judicial impartiality has been authoritatively defined, the role of the jury has been exposed to intense public and legal debate, liability of advocates for courtroom negligence has been established, the appeals system has been altered, alternative dispute resolution has become a major feature of British life, and European law has continued to widen and deepen its application. The Sourcebook guides the reader through these areas, as well as the more traditional elements of any course on the English legal system, with clarity and insight.

This book provides an easily portable yet comprehensive guide to the PACES examination. It includes all of the most relevant clinical information for the PACES exam supplemented by tips supplied by the highly experienced chapter authors. The main aim of the book is to consolidate candidates' theoretical knowledge and help them apply it to the clinical examination scenario. In addition the book forms an excellent pocket reference for trainees in acute medicine, accident and emergency medicine, anaesthetics and critical care and general practice.

This handbook presents reviews of long cases of surgery in short for the benefit of students of MBBS final year. Provides information on the best of questions and tests with references based on the clinical cases drawn from the most important textbooks of surgery. Contains 10 long-cases giving an apt direction and guidance to write precise and correct answers on questions that are frequently asked by external examiners. The text helps to have a quick glance through the important cases, their history and relevant discussion points. It acquaints with the latest investigations, most recent classifications and current trends in management. It highlights the checklist of most-read topics about which questions are raised in clinics and examinations

The second edition of the hugely popular The Clinical Anaesthesia Viva Book builds on the success of the first by providing a thorough review of short and long case questions typically given to Final FRCA viva candidates. An introductory chapter gives invaluable practical advice on preparation for the viva. This is followed by almost 100 short cases and 25 long cases, all based on viva questions posed at recent examinations. Answers have been constructed from a combination of popular textbooks, recent publications and the extensive practical experience of the authors. Short further reading lists are provided for more in-depth preparation. Written by a team of expert consultants and senior trainees with (successful!) experience of the Final FRCA, this second edition of The Clinical Anaesthesia Viva Book, is a must-have for anyone preparing for the Final FRCA viva.

Part 2B of the FRCR examination for trainee radiologists involves six 'long cases', which can contain images of any body system and any imaging modality: plain film, CT, MRI, ultrasound, nuclear medicine and contrast studies. FRCR 2B: A Guide to the Long Cases contains 60 highly illustrated long cases and answers, organised into 10 sets of 6 cases. The cases are based on the format of the exam and the answers are at the level of detail the candidate would be expected to provide in the time allocated. An introductory section explains the College's marking scheme and advises on the best approach to the long cases and how to structure an answer. A succinct topic review is provided with each case. Jointly edited by a successful FRCR fellow and an experienced consultant radiologist, FRCR 2B: A Guide to the Long Cases is essential reading for all exam candidates.

Intended primarily for those preparing for their final clinical examination in General Surgery, this book covers only the clinical part of the exam -- examined as short and long cases, OSCEs as well as viva -- and approaches the usual surgical problems from that perspective. It concentrates on the type of questions asked by the examiners and how to respond in a way that will give

the candidate the best chance of success.

List of members in each volume.

A new edition of a very successful book designed to provide students with advice about how to prepare for and carry out their clinical examinations in general medicine. It covers all parts of these exams - the long cases, OSCEs, the viva and the short cases, but concentrates on the latter as this is the part that students find most difficult. As well as giving examples of how to carry out the clinical examination it also lists descriptions of typical cases in each medical specialty and at the end of each chapter lists the key questions that are most frequently asked. The book is illustrated with colour photographs, radiographs, line drawings and cartoons. It is a cheap, well-presented book and is proving popular with hard-pressed students as they prepare for their final exams.

A new, fully updated edition of Baliga's very popular collection of short cases arranged by clinical area, emphasising the key diagnostic features of clinical conditions as commonly presented in the short-case part of the Final MB and MRCP examinations. Also included are likely instructions or commands expected from the examiner for each condition, and the key points which the candidate must tell the examiner. A must-have for the final-year undergraduate and trainee doctor. From customer reviews of the previous edition: 'This book is the most useful guide that money can buy for the final exams in the current MBChB undergraduate course. It covers important areas of clinical medicine in a question based format and highlights classical scenarios. The questions raised are classical of examiners in the long and short case examinations. This is a must buy for any undergraduate medical student!!!' 'The book is a must during the period that the young doctor or student is on the wards. It allows one to focus on the important physical findings and the relevant clinical pearls associated with the different medical conditions met... It discusses important physical findings and their diagnostic importance. I have found it useful in preparing for attending ward rounds and also for sharpening my clinical skills. The discussion section is well organised such that undergraduates as well as postgraduates can benefit and the material is up to date with good references for further reading.' 'Excellent preparation for finals as well the MRCP ...MUST HAVE before MRCP PACES.' Features Ideal for use in the ward. Each of the 250 cases presents a disease or topic which is covered consistently to address: ? salient features ? history ? examination ? diagnosis ? questions covering investigations and differentiations ? advanced-level questions ? management. New to this edition: Over 350 new images Enhanced advanced-level questions Many more tables
