A haunting and hopeful tale of discovering light in even the darkest of places. For his whole life, the boy has lived underground, in a basement with his parents, grandmother, sister, and brother. Before he was born, his family was disfigured by a fire. His sister wears a white mask to cover her burns. He spends his hours with his cactus, reading his book on insects, or touching the one ray of sunlight that filters in through a crack in the ceiling. Ever since his sister had a baby, everyone's been acting very strangely. The boy begins to wonder why they never say who the father is, about what happened before his own birth, about why they're shut away. A few days ago, some fireflies arrived in the basement. His grandma said, There's no creature more amazing than one that can make its own light. That light makes the boy want to escape, to know the outside world. Problem is, all the doors are locked. And he doesn't know how to get out...

Artificial Life is the study of man-made systems that exhibit behaviors characteristic of natural living systems, such as self-organization, reproduction, development, and even evolution. It complements the traditional biological sciences concerned with the analysis of living organisms by attempting to synthesize and study life-like behaviors within computers or other "alternative" media. By extending the empirical foundation upon which biology rests beyond the carbon-chain based life that has evolved on Earth, Artificial Life can contribute to the theoretical biology by locating "life-as-we-know-it" within the larger context of "life-as-it-could-be," in any of its possible physical incarnations.

A History of Children's Reading and Literature presents the pattern of educational activity in relation to the methods undertaken in the schools, and the extent to which books are used in the advancement of literacy. This book describes the factors that are contributory or detrimental to the growth of literacy, including educational provision, the availability of school and public libraries, the use of books in schools, and the parallel evolution of recreational literature of all kinds. Organized into 22 chapters, this book starts with an overview of the educational activity during the years of economic depression wherein economic factors resulted in a national state of social unrest that both State and Church came to recognize could be controlled only by the extension of education. This text then describes the successive educational legislation and other factors that contributed to the advancement of public libraries in the last three decades of the 19th century. This book is a valuable resource for teachers, parents, and students.
